ANNUAL REPORT

OF THE

SECRETARY OF INTERNAL AFFAIRS

OF THE

COMMONWEALTH OF PENNSYLVANIA,

FOR THE

YEAR ENDING NOVEMBER 30, 1884.

PART I.—LAND OFFICE.
PART II.—ASSESSMENTS.

REPORT

OF THE

SECRETARY OF INTERNAL AFFAIRS.

COMMUNICATION.

DEPARTMENT OF INTERNAL AFFAIRS,
HARRISBURG, *December 1, 1884.*

To His Excellency, ROBERT E. PATTISON,
Governor of Pennsylvania:

In compliance with the requirements of the Constitution, I have the honor to present you herewith, for transmission to the General Assembly, reports of this Department for the year ending with the 30th ultimo, as follow:

Part I. Land-Office.
Part II. Assessments.

I am, very respectfully,
Your obedient servant,
J. SIMPSON AFRICA,
Secretary of Internal Affairs.

181271

PART I.---LAND-OFFICE.

REPORT.

Money Received.

During the fiscal year ending with the 30th day of November, 1884, there was received in this Department, and paid into the State Treasury, in connection with business in the land-office, the sum of $7,110 95. Of this amount, $3,013 80 was for purchase money for lands and interest thereon; $1,151 26 for warrant and patent fees; from sale of geological reports, $705 14; and $2,240 75 fees received for copies of warrants, surveys, patents, and other documents, as will appear in the appended detailed statement.

Business Performed.

In compliance with the requirements of the acts of Assembly approved, respectively, the 2d day of April, 1811, and the 31st day of March, 1812, the following accounts, in detail, of the money received and business performed in the Department, during the last fiscal year, have been prepared.

STATEMENT

Showing the number of warrants, patents, and certificates to the State Treasurer, issued from December 1, 1883, to November 30, 1884, both days included, with the amount of purchase money, and fees for warrants, patents, &c.; also, copying fees received during the same period:

MONTH AND YEAR.	New warrants.	Patents paid for.	Excess tickets.	Certificates to State Treasurer.	Purchase money.	Warrant and patent fees.	Copying fees.	Totals.
1883, December, .	4	6	4	14	$219 62	$95 00	$242 00	$556 62
1884, January, . .	6	12	1	19	245 07	185 00	280 25	710 32
1884, February, .	2	4	. . .	6	46 94	55 00	168 00	269 94
1884, March, . . .	3	6	2	11	225 34	80 00	292 25	597 59
1884, April, . . .	4	9	1	14	974 07	155 90	233 25	1,363 22
1884, May, ...	7	3	2	12	150 51	95 00	211 50	457 01
1884, June, ...	6	4	5	15	283 69	68 15	156 25	508 09
1884, July, . . .	5	6	. . .	11	90 67	101 50	133 25	325 42

Recapitulation.

Purchase money,		$3,013 80
Warrant and patent fees,	$1,151 26	
Copying fees,	2,240 75	
		3,392 01
From sale of Geological Reports,		705 14
Total amount paid into State treasury,		$7,110 95

DETAILED STATEMENT

Of fees received for the year ending November 30, 1884.

990 copies of surveys,	$990 00
247 copies of patents,	247 00
205 copies of warrants,	102 50
87 searches,	21 75
91 connections, embracing 633 tracts,	474 75
66 copies of applications, and 226 miscellaneous copies,	404 75
52 warrants issued,	260 00
Patent fees, including warrants of acceptance, and other fees,	891 26
Total,	$3,392 01

RESUME OF BUSINESS OF THE DEPARTMENT FOR THE YEAR ENDING NOVEMBER 30, 1884.

Letters Received and Answered.

4,100 relative to land-office business.
1,200 relative to industrial statistics.
350 relative to railroads and assessments.

Reports, Blanks, and Circulars Forwarded.

1,775 relative to land-office business.
9,600 relative to industrial statistics.
2,500 relative to railroads and assessments.

Land-Office.

2,242 copies of original papers certified and issued under the seal of the Department.
3,750 searches for warrants and surveys, required for patenting, copying, and connections, and refiling the same.
2,147 entries in fee-book, transcribing the same quarterly for settlement with the Auditor General.
4 quarterly returns to Auditor General.
82 applications for warrants received and entered on register.
68 applications for patents received and entered on register.
82 applications for warrants indorsed and filed.
68 applications for patents indorsed and filed.
52 tickets issued for warrants.
18 tickets issued for excess.
70 tickets issued for patents.
3 tickets issued for lien.
50 new warrants issued, recorded, registered, numbered, and filed.

50 new warrants issued and directed to county surveyors for execution.
2 warrants to accept surveys issued, registered, numbered, and filed.
45 new surveys from county surveyors, calculated and compared with warrants.
45 new surveys entered on surveyors' lists of returns, numbered, and filed.
9 new surveys containing an excess of land calculated, compared with warrants and placed in excess files.
7 new surveys calculated, compared with warrants, and returned to county surveyors for correction.
70 entries on warrants or applications of the time of patenting.
70 indorsements on surveys of the time of patenting.
70 entries in warrant registers of the time of patenting.
143 calculations of sums due.
143 certificates of sums due directed to State Treasurer.
143 State Treasurer's receipts entered and delivered to the Auditor General.
143 vouchers written and entered in fee-book.
143 vouchers numbered and filed.
70 patents written, recorded, and indexed, embracing 14,073 acres of land.
47 satisfaction of liens entered on land-lien dockets.
47 certificates of liquidation of liens made out and forwarded to the Prothonotaries of the several counties, under the act of the 4th day of April, 1868.
70 caveats entered, recorded on caveat-book, and filed.
18 citations issued, and noted on caveat-book.
449 surveys copied and certified under the act of 16th day of February, 1833.
9 patent books re-indexed, embracing 19,140 patents.
12 monthly statements delivered to the Auditor General.

The Land-Office Records.

Few persons in the Commonwealth beside lawyers, conveyancers, or surveyors, become familiar with the land-office, or have a just conception of the number and value of the papers and records thereof, or could appreciate the extent of the loss that would be sustained by land-owners in the destruction of its archives. The attention of the Legislature has been directed, in several preceding reports, to the non-fireproof character of the building, and the possibility of damage resulting from accidental fire.

In the method of acquiring title to vacant lands adopted by the Proprietary of the Province and followed by his successors and the Commonwealth, a warrant or order preceded any official survey. Upon this authority, the officer of the proper district made a survey of the particular land applied for, of such shape as the fancy or interest of the applicant dictated, and returned a draft of his work to the Surveyor General. This draft remained the only official evidence of the survey or its boundaries until a

patent was granted in which the bearings, distances, corners, area, adjoiners, and date of the office title were particularly noted. As a rule, the patent was recorded before delivery, and thus the office has, in most cases, two, and where the written returns are extant, three records of the metes and bounds of a survey. There remain thousands of unpatented tracts. Of these, the only description of the survey is contained in the returns of the deputy or county surveyors. A large proportion of these returns were made on inferior paper—some are very old, and by constant handling have become so worn that, with the browning of the paper and fading of the ink, it is often difficult, and sometimes impossible, to decipher the letters and figures. The work of copying into books the decaying returns of surveys of both patented and unpatented tracts, as authorized by the act of February 16, 1833, is carried on as rapidly as the prompt dispatch of the current business of the Department will admit, but the amount of labor of that character is far greater than can be performed by the present force of the Department as promptly as its importance demands.

During the existence of the office of master of rolls, patents, charters, deeds, and other documents were, sometimes, recorded in the same volume, and, on its abolition, May 10, 1809, and distribution of the record-books among the several offices authorized to receive them, some volumes containing some records of patents and other land-office titles were not deposited in this office, thus occasioning great inconvenience to parties interested.

In the territory lying west of the Allegheny river, where lands were laid off as rewards to the soldiers of the "Pennsylvania Line" in the war of the Revolution, tracts were drawn by those entitled to receive them, and patents issued by the Supreme Executive Council. The law directed a general map to be prepared on which the name and rank of the person should be inscribed in the lot drawn by him, and that this map should serve as a public record in lieu of recording the patents. Many careful persons, however, caused their patents to be recorded. The record kept by the Secretary of the Supreme Executive Council of the patents issued (subsequently transferred to the land-office) has been found to be defective. Several patents issued by that officer have been produced at the Department of which no note was made upon his record. There are, doubtless, many similar cases, and the Department might, having no guide other than the faulty record mentioned, unwittingly issue a patent for a donation lot that had been confirmed nearly a century ago. Public attention is thus directed to the subject so that the possessors of any such patents might examine the record here, and, if it is not complete, have the necessary amendment made.

The Board of Property

Held six stated and four adjourned or special meetings during the year, at which sixty-three cases were heard, either in full or in part, and decisions rendered in twenty-nine of them. Three petitions relating to rehearings and other matters were presented.

County Surveyors.

Certificates of the election of county surveyors at the last general election, in three of the counties of the Commonwealth, were sent to this Department by the proper local officers, but, as there was no authority by law to choose such officers at that time, the certificates were not filed. This office was made elective by a law approved May 9, 1850, which provided that a county surveyor should be chosen in each county at the general election in that year and *every third year thereafter.* The regular triennial election should have been made in 1883. No election can be had by the people until 1886. The act mentioned authorizes the court of quarter sessions to fill any vacancy that may occur in the office.

The duties of a county surveyor are limited to the execution of warrants and orders of survey issued from this Department. In some counties there has been no business transacted in the office for years, and in others there is so little to be done, that the emoluments scarcely justify those elected in qualifying to enter upon their duties.

The Resurveys of State Lines.

The work of reëxamining and re-marking the boundary line between this State and the State of New York is not yet completed. It has been conducted under authority contained in acts of the General Assembly passed, respectively, May 8, 1876, June 11, 1879, and July 5, 1883. The commission appointed by the Governor of this Commonwealth to act in conjunction with a similar commission of the State of New York, has hitherto, in compliance with law, made annual reports on the progress of the survey, which were included in the annual reports of this Department.

The resurvey of the western boundary was authorized by the acts of May 18, 1878, and June 8 and 10, 1881. That portion thereof extending from Lake Erie to the Ohio river was completed by the Pennsylvania and Ohio Joint Commission in the year 1882, and final report thereon was filed in this Department October 1, 1883. This report, with the accompanying map and survey notes, was printed last year. The work on that portion of the meridian boundary south of the Ohio river, and on a part of the "parallel," or southern boundary separating this State from the State of West Virginia, has been completed, and the maps of C. H. Sinclair, Esq., engineer in charge, together with his report, have been filed in this Department and are appended hereto. No report has been received from the Joint Commission. It has probably been deferred until after the completion of the survey of the southern boundary.

Geodetic Survey.

The article on "The Geodetic Triangulation in Pennsylvania" is reprinted in this volume from last year's report, with the results of the current year's work added thereto. It is to be hoped that this important work, in charge of Professor Mansfield Merriman, conducted under the direction of the Superintendent of the United States Coast and Geodetic Survey, may

be continued until the whole territory of the Commonwealth shall be covered with its net-work of triangles. By this survey, the latitude and longitude of each station are determined with the greatest attainable accuracy, as well as the distance from station to station. Only from the data obtained by such methods can a correct representation of the topographical features of the State be constructed. The unreliability of the best maps of the State, as to accuracy in detail, may be demonstrated by comparing the latitude and longitude of the principal towns, as shown on those issued by different publishing firms. A number of these towns are located on some maps several miles from their true position.

Assessments—State Census.

The assessment returns forming Part II of this report are the most complete that have been published, yet they are not as full of details as they ought to be, or as they are expected to be after the next triennial assessment shall have been made. The law providing for the rating of property for county rates and levies directs that all objects of taxation, "whether for State, county, city, district, ward, township or borough purposes," shall be valued and assessed "according to the actual value thereof, and at such rates and prices for which the same would separately *bona fide* sell." Although it is the clear intent of the law that taxable property shall be rated at its commercial or selling value, a custom has grown up, and is rigidly followed in some counties, of making the rate one-half or even one-third of its value. As long as a State tax continued to be levied on real estate, there was an inducement for some counties to lower their rate in order to avoid contributing their just share to the revenues of the State. That burden having been removed, there remains no reasonable excuse for the several assessors to violate the plain letter of the law. It needs only an examination of the returns tabulated on page 268 B, and of the comparisons instituted on the pages preceding the county returns, to note the great inequalities in the aggregate valuation of counties of about equal wealth. In some, the assessments reach about the standard fixed by law, and in others they fall much below it.

Next year (1885) a triennial assessment will be taken, and the assessors will be required, according to the act of June 13, 1883, (P. L. 112,) to make a "return of all the timber land in their proper district by specifying in separate columns how many acres each tract contains of cleared land and how many in timber."

Inquiries are occasionally made at this Department for the aggregate amount of taxes of all kinds levied in the Commonwealth. Neither this nor any other Department possesses such information, nor has any means of collating it. A large sum is annually levied for State, county, school, borough, road, and poor taxes; its exact amount is not now known, but could be annually or triennially ascertained, if, by legislation, the several assessors were required to collate and include the aggregate of local taxes

levied in their respective districts in their returns to the county commissmissioners, who should be enjoined to add the same to their reports to this Department.

Some of our sister States cause a census of population to be taken decennially, intermediate between those taken by the United States Government. In the boards of county commissioners and local assessors, the machinery already exists for making the enumeration promptly and at comparatively little expense. Beside the mere numbering of the people, much other information of interest to the general public could be obtained in the same manner.

Additional Cases Needed.

The annual increase in the books and papers of this Department since the present cases were built in 1876 has been so great that more room will be needed for the proper and convenient keeping of the accumulations of next year and succeeding years. The attention of the Legislature is, therefore, respectfully called to the necessity for authorizing the construction of new cases.

Rainfall.

The amount of the annual rainfall and its increase or diminution are subjects of considerable interest to several classes of our people. It was hoped to present in this report, in response to inquiries on the subject, statistics from several points of observation in the State, but the desired information was not obtained. An article on the subject by John Torrey, Esq., of Honesdale, and very complete tables of observations made at Pittsburgh from September 1, 1883, to August 31, 1884, are annexed. The Pittsburgh observations have an additional value in the statement of the daily stage of the water in the Ohio river.

Amount of Rainfall in North-eastern Pennsylvania.

It is a well-ascertained fact that the annual flow of water into the artificial reservoirs in this part of the country has been much less during the last ten or fifteen years than was the case twenty to forty years ago. And in endeavoring to learn the cause of such diminution, the impression has become very prevalent that there has been a greatly diminished quantity of annual rainfall.

This conclusion, however, was reached without the evidence of a record of an actual measurement of the quantity of rainfall, because it was not known where such records could be found that were reliable and applicable to this section of country.

In 1837, an act of Assemby was passed by our Legislature making an appropriation of $4,000 "for the purpose of promoting the improvement of meteorological science, and the furnishing of each county with the necessary instruments," &c.

The expenditure was entrusted to the Franklin Institute, of Philadelphia,

and by it instruments. including rain gauge, thermometer, barometer, &c., were furnished to the several counties, together with blank forms for keeping the records and making reports, and persons were found in the several counties who promised to keep a careful record and make reports as directed.

But as no appropriation was made to pay for keeping such records, the result proved, as might have been expected, that they were very imperfectly kept.

The reports of the various observers were tabulated and published in the *Journal of the Franklin Institute* during the years 1839, 1840, and 1841.

Through the kindness of an obliging "friend," a careful examination of these published reports was made for the writer, with an expectation of finding evidence as to the actual annual quantity of rainfall in this region forty years ago; but the reports from these north-eastern counties were found too imperfect to be of any value for that purpose.

In further searching for such records, the writer learned that the Smithsonian Institute had made and published a compilation containing all the information on the subject which could be obtained. He procured a copy of that publication, which is entitled "Tables and Results of the Precipitation of Rain and Snow in the United States," by Prof. Charles A. Schott, of the United States Coast Survey.

The work contains several valuable elaborate tables, together with numerous diagrams and charts, illustrative of the matter contained in the tables, one of which gives the average *monthly*, *quarterly*, and *annual* precipitation of rain as ascertained by actual measurement at more than fifteen hundred stations in the United States, with the latitude, longitude, and elevation above tide of each station.

The information contained in the work was considered so valuable by the compilers of the last United States census statistics, that they have, from the materials contained in those tables, together with information obtained since the tables were compiled, had *revised* charts prepared with great care, and published in the census report.

These charts subdivide the United States into districts, classified according to quantity of rainfall, having a separate class for each five inches of average annual rainfall.

According to these tables and charts, the annual average in the different parts of Pennsylvania is as follows:

In the counties of Bucks, Montgomery, Philadelphia, Delaware, and most of Chester, forty-five to fifty inches.

In the residue of that portion of the State east of the main ridge of the Allegheny mountain, and south of a line near the forty-first parallel of north latitude, forty to forty-five inches.

In that portion of the State west of the Allegheny mountain, and in so much of that portion east of the mountain as lies north of the forty-first parallel of latitude, from thirty-five to forty inches.

There should, however, be excepted from this district the northern part of Tioga, Potter, and McKean counties, which is in the southern extremity of a district extending northward into the State of New York, classified as having only from thirty to thirty-five inches.

This subdivision places all the north-eastern counties in a district classified as having from thirty-five to forty inches of annual rainfall.

Appleton's New American Cyclopædia, (revised edition,) in referring to the first edition of Schott's Tables, states that they show that, during the last fifty years, there has been a gradual small *increase* in the average annual rainfall in the New England and Middle States, and gives figures showing that from 1830 to 1870 the average rainfall in those States during each period of ten years was a very little greater than that of the next preceding ten years, and adds that the British and American observations unite in showing that during the last sixty years there has not been any appreciable change in the amount of average annual rainfall.

At the following places in the north-eastern part of Pennsylvania, the tables show that records have been kept continuously for three or more years, showing an average annual rainfall as set to them :

Dyberry,	12 years,	35.31	inches.
Salem,	3 "	39.25	"
Blooming Grove,	9 "	44.47	"
Easton,	5 "	45.46	"
Berwick,	5 "	36.64	"

A record has also been kept at Honesdale during the past two years, showing an average of 36.88 inches.

A careful examination of the reported quantities of rainfall during the last ten years, at most of the stations in Pennsylvania and vicinity where records have been kept fifteen years or more, shows conclusively that the average during those ten years *has not been less* than the general average at those stations since their records were commenced.

A consideration of all these facts will fully justify a conclusion that there has not, during the last fifteen or twenty years, been any such diminution of annual rainfall as would cause any perceptible effect on the flow of water into artificial reservoirs, and that the lack of as great flowage into them as was formerly the case must be attributed to increased evaporation caused by the cutting off of the forests of timber and the cultivation of increased quantities of land.

There is much other valuable information in the tables and charts mentioned which would furnish some good writer with abundant material for several interesting articles.

Meridian Lines and Standard Measures.

A step toward securing greater accuracy in the practice of land-surveying was taken by the Legislature in the passage of the act of April 26, 1850, (P. L. 595,) which provided for the establishment in each county of a true meridian line and standard measures for two and four-pole chains, and required surveyors to test their instruments thereon annually. The correct measurement of a line is just as important an operation in surveying a tract of land as the accurate observance of its angles. Any practitioner can recall instances of inaccuracy of measurements that amount almost to criminal negligence. An elaborate article on "Precision in Chaining," prepared by Mansfield Merriman, Esq., Professor of Engineering in the Lehigh University, will be found on subsequent pages, and is commended to the careful perusal of all engineers and surveyors. The usual "Meridian Line" blanks were sent to county surveyors and others. The points on which information was sought were:

I. Meridian line. I. Location. II. When established. III. How marked.

II. Amount of present declination of the needle from the true meridian and progression since its establishment.

III. Note other reliable tests by retracing fixed and certain lines.

IV. What additional legislation would you recommend to secure the greatest attainable accuracy in land-surveying and the preservation of boundary monuments?

V. Remarks and suggestions.

Replies were received as follows:

ALLEGHENY.—Frank Hunnings.

144 FIFTH AVENUE, PITTSBURGH, *October 28, 1884.*

1. No official meridian line, to my knowledge, has ever been established in this county, and I know of no private meridian lines used by our surveyors, except one that I have recently established for my own use, near my residence in Millvale borough, near Allegheny City, latitude 40° 28½′ N. This line was established from an observation on September 26, 1884, at 6.57, P. M., and is marked by pins, and connected by an angle with the principal street line of the town.

2. The declination of the needle West, September 26, 1884, was 2° 41′ 13″. I have no notes of its progression, as the line was so recently established.

3. My observations recently in retracing a number of fixed lines indicate an annual progression West of 3′ 45″ to 4′ 0″ during the past thirty to forty years. In running a trial line and estimating the variation, I should allow 0° 4′ 00″ per annum.

4. To secure greater accuracy in land-surveying, I would recommend such legislation as would compel all surveys to be made by angles, and all bearings to be calculated from the true meridian of the locality; also, that all corners be marked by substantial stone land-marks, and that no plans

of lots, or plot of any town or addition, be placed on record unless the principal street lines are well-marked by permanent stone land-marks. In order that local surveyors may be able to work from true meridian lines, I would advise that a primary system of triangulation be extended throughout the State into every county, to be done by the State authorities, and that this system be subdivided into smaller or secondary triangles by the authorities of each county; these triangles to be marked by permanent land-marks and a plan of the same, showing the correct bearing of every line, be placed on record at each county seat; these corners and land-marks to be so located throughout each county, that a survey made in any part of the county could be easily and readily connected by angles with the official lines. I am also in favor of some system providing for the examination, as to the professional knowledge, of all surveyors, and licensing to practice only those who are competent. I would further refer you to an article written by myself and published in the *Pittsburgh Dispatch* during the past summer, (of which I sent a copy to you,) and which advised a system of meridian lines especially for Allegheny county.

[The annexed article is the one referred to above.—SEC. I. A.]

WHAT SURVEYORS NEED IN THIS COUNTY—TRUE MERIDIAN LINES SHOULD BE ESTABLISHED—REQUIREMENTS OF AN IGNORED LAW.

To the Editor of the Dispatch:

I desire to call the attention of our county commissioners, the county engineer, and the practicing civil engineers and surveyors of this county, to a subject in connection with the new court-house, which I believe to be of importance and practical benefit to our profession and those owning and interested in real estate. In traveling about the western counties of this State in the practice of my profession, I have observed on the court-house grounds of all the adjoining counties permanent and substantial stone land-marks, erected and placed, or presumed to be placed, on exact, true meridian lines. The purpose of these monuments is for surveyors practicing in those counties to test the magnetic variations of their compasses or transits from the true meridian, and also to enable a record of the variations to be kept by the county authorities, and thus being of valuable assistance and importance in retracing old land lines. By an act of the Legislature passed, I think, twenty to twenty-five years ago, it is made the duty of the county commissioners to erect the monuments I have briefly described, and also keep a standard measure for surveyors to test their chains and tapes by, &c.

In the course of twelve years' practice in this county, I have never heard that any such standard measure or meridian line exists in Allegheny county, and the reason that suggests itself to me, so far as regards the non-existence of the standard meridian, is one that would fully exonerate the commissioners from blame, namely, the size of the court-house grounds,

and the probably strong attraction from iron fence, &c., would prevent the proper testing of magnetic variation immediately on the court-house grounds.

The plan I propose is one that would more fully and perfectly carry out the spirit and intention of the law than the method used in adjoining counties. It is to make the center of the new court-house tower the center of a series of lines radiating from it and terminating in permanent stone landmarks, placed on the hills surrounding the two cities, or other prominent positions, these lines to be on a true meridian, and of exact and recorded degrees of variation therefrom; these stones or monuments to be at all times accessible to practical surveyors, who could set their instruments over the monument and sight to the court-house tower and read the magnetic variations of their needles from the recorded true bearing; or, if a surveyor desired to survey a tract of land by angles, (a far closer method,) he would simply set up his transit on one of these landmarks, deflect an angle to the corner of the land to be surveyed, and so directly connect the lines of his survey with the established standard meridian. I could go on and mention many ways in which this plan I propose, or some other the same in principle but possibly differing in detail, would be of great benefit to engineers and surveyors and land-owners, but I do not wish to intrude too much on your valuable space. These lines could be established and marked while the court-house tower is partly built, and possibly started by an angle from the Allegheny observatory. The lines could be extended indefinitely through the county, and made of service in a trigonometrical survey of the county at any future time.

I believe that the city engineers of both cities, and all surveyors who take a pride in accurate and systematic work, would be glad to have such a system adopted, and I should be pleased if this article might be the means of calling the attention of the profession to the subject.

ARMSTRONG.—R. S. Slaymaker.

KITTANNING, *September 26, 1884.*

1. There is no meridian line established in this county. The difficulty is, that the ground owned by the county is entirely taken up with the county buildings, and there is no ground under the control of the county suitable for a meridian.

2. I am unable to give the present declination of the needle, there being no meridian line established.

3. My observation in retracing lines that I run a number of years ago to be 4′ a year.

4. The requiring land-owners to put in lasting corners, not wooden posts that will rot away in a few years or may be pulled out either intentionally or otherwise, would save many law suits. I have urged this on land-owners, and a few have done so.

5. There are many difficulties surveyors have to contend with, but I cannot see any remedy.

KITTANNING, PA., *25th September, 1884.*

J. SIMPSON AFRICA, Esq.,

DEAR SIR: Mr. Cochran is away from home, and sent the inclosed to me and requested me to fill the blanks and forward to you. I wish there was ground under the control of the county that a meridian line could be established. I would insist on the commissioners having one established.

The destruction of corners and line trees is a great curse to our county, and leads to any amount of trouble, as frequently all a surveyor has to trace the line, is a deed which may be a copy of some old deed, and no one knows when the last survey was made. Marks gone, no date to calculate variation, cannot depend on chaining, yet a surveyor is expected to find the line. Often I am called on to run lines and have to be my own axeman, flagman, and sometimes chain carrier.

Yours truly,

R. S. SLAYMAKER.

BERKS.—Sol K. Dreibelbis.

HAMBURG, *October 29, 1884.*

2. No meridian line has been established in this county, and therefore I am not able to give a statement based upon observations made on a true meridian line. The only data I can give is based upon a single observation made upon a meridian line constructed lately for my own use, and is as follows: Variation, 5° 17′ west. In my opinion, no true meridian is of any value in making surveys except those connected with the survey to be made by measured angles.

4. The additional legislation should be such as to require each surveyor to be fully competent to carry out the duties and practical knowledge essential to accuracy, and that base lines be established on each survey to be made, and angles measured and the bearings calculated therefrom and so placed on a plan, and that no deed or mortgage be admitted to record without such a plan or copy thereof made a part of said instrument.

BUCKS.—David W. Hess.

SPRINGTOWN, *November 21, 1884.*

Soon after the act of April 26, 1850, the county commissioners of Bucks county established a meridian line at Doylestown, in the yard or park of the old court-house. Some eight years ago, a new court-house was erected in the same yard or park, (larger than the old one,) and this destroyed or done away our meridian line. About a year ago, our county commissioners employed a practical surveyor of Bucks county to establish a new meridian

line at the Bucks county alms-house, which is some two or three miles south of Doylestown, our county seat.

On the 28th of April, 1884, Samuel H. Laubach, Esq., the former county surveyor of Bucks, and myself went to said alms-house with our surveying instruments for the purpose of complying with the above act of Assembly, and when we came there we were shown some rude beginnings to establish a meridian line, which work could not be completed in time to comply with the act of Assembly for April, 1884.

CAMBRIA.—Henry Scanlan.

EBENSBURG, *October 9, 1884.*

4. Would ask the Legislature to pass an act allowing all owners of lands, tracts, or parts of tracts, to have a resurvey of their lands, first giving thirty days' notice to adjoiners; a copy of notice to accompany survey when returned. Fire, decay, and cutting of timber destroy land-marks. As most all our original surveys increase in distance, resurveys to be marked by stone or iron monuments. It is the only way to do justice and stop litigation about our old surveys.

CLEARFIELD.—S. F. McClosky.

CURWINSVILLE, *October 28, 1884.*

1. We have no meridian line established in this county; have never been able to prevail on our commissioners to comply with the provisions of the act of 1850, directing them to establish a true meridian line, although some years ago I insisted upon it time and again. Neither have we a fixed standard measure for chains, consequently have no standard means for testing instruments or chains in pursuance of said act.

3. The lines of Clearfield county have been badly run originally (as you are aware.) They could not be considered a test of variation, as I find the lines of surveys made in the same year, for instance in 1793, varying from three to five degrees, and this, in many instances, in the lines of the same tract, as also the lines of surveys made more recently, say thirty or forty years ago.

4. It is an alarming fact that the original lines and corners of the surveys in this county are fast going into oblivion. The woodsman's axe, the forest fires, natural decay, all combine to obliterate and destroy the original monuments, so that when the present generation of surveyors has passed away, who can tell of their whereabouts? I answer, *no one.* and for the reason that the lines having been so irregularly run and marked, the proper course, even from a fixed point, would not place them where they originally were. I would therefore recommend that an act be passed requiring the establishment and preservation of all the original corners known, by planting a large stone, cut for that purpose, in the proper place, where the original corner was, by proper persons—surveyors—who know its

true location, and that a record of the same be kept in a book for that purpose in the recorder's office of the county in which said monuments are erected, and that record to represent or state the kind of wood the original corner was, if known, and the number or name of the warrants so located.

5. My suggestions under heading 4, it seems to me, are of vast importance to this and adjoining counties; knowing as I do the condition of the country, the lines and corners of the warrants, and their liability to so soon become entirely lost, it seems to me that something ought to be done for their preservation.

CRAWFORD.—Frank V. Mallory.

Saegertown, *November 6, 1884.*

1. See report of Frank R. Young, page 14*a* of your annual report for 1883.

2. The present declination of the needle, as recorded by those of our surveyors who deem this duty noteworthy, is respectively: Kosciusco McArthur, 3° 10′; Frank R. Young, 3° 15′; A. W. Mumford and Frank V. Mallory, 3° 6′; average, 3° 7′ 45″.

The annual progression of the needle is indefinite, as some of our best surveyors have recorded the same declination for two or three successive years. From a careful observation with an instrument which was accurately tested at the time of the establishment of the line, I find it to average about four minutes.

4. While I believe that a true meridian, an established triangle or some other fixed and definite standard from which to work, is the only sure method by which accuracy in surveying and the preservation or reproduction of lines is made possible, I also believe such a method to be only the possible result of several years' growth or a series of improvements in this important subject. In my experience, I have no case where sufficient marks could not be found to satisfactorily settle any dispute that might be instigated. All that seems apparent is the establishment of indestructible monuments while the necessary evidence remains. To pass a law compelling these persons (say nothing of those not interested in the boundaries of land) to bear the burden of a matter which is, to say the most of it, satisfactory in nine cases out of ten, would, from my knowledge of the lines of this county and the feeling of the people, be most earnestly opposed and looked upon as a usurpation of rights and privileges. I would recommend the passing of a law, in addition to the enforcing of present laws relative to this matter, requiring, and perhaps compelling, every surveyor, 1st. To use an instrument which shall be tested and approved by some person or persons competent to judge of the fitness thereof; 2. To erect permanent corners upon every survey which he may make; the adjoining land-owners to pay their share of expense thereby incurred; 3. To make use of his own chainmen, who shall be men of known ability. 4. That he make use of the most approved standard measuring apparatus known to the profes-

sion. This I believe to be the greatest step that could be taken with good results expected. To permanently mark seems to me to be the duty of the time.

5. If our surveyors would take the longest and best marked line within their reach, and test their needle by making two or three tests along the base line, taking the average of the indicated bearings for the true bearing and then run the other lines by means of angles from this line and independently of the needle, they would find their work productive of better results.

CRAWFORD.—Frank R. Young.

BLOOMFIELD, *October 30, 1884.*

2. The present declination is 3° 15′; in 1883, it was the same as in 1884; in 1882, it was 3° 10′; in 1881, it was 3° 5′; in 1881, it was 3° 0′. There was a meridian established about 1878, but found very much out of line, and so pronounced by all surveyors that tested it, and they would not run lines by it, and H. B. Beatty and the professor moved the south monument some six feet to the east. The standard measure is on the barn of the poor-house, a very suitable place.

3. There are no reliable lines by which we can ascertain the variations Our donation lines were originally run in a very careless manner or by incompetent persons. We look for the course anywhere from due north to as high as 15° east, and, in running from a known corner to the west, (about two hundred rods,) I have found what was marked for sight trees on both sides of the true line crossing their lines from one to as high a four times, and modern surveyors return (if at all returned) these lines by the needle, and as there is a discrepancy in instruments, then the next surveyor does not know what course to run.

4. I would so change section fourteen of April, 1850, and make it the duty of the constable or some other officer to take some pains to know how the survey is returned and made, and return the same to court and authorize the judge to inflict some punishment or fine instead of leaving it as now, "may, on the complaint of any person, &c." I would recommend that all deeds hereafter should, to be valid, contain the courses and distances, and state the meridian line by which they were run. I find a large proportion of the deeds made by what they call general boundaries, to wit: On the north, by John Smith; on the east, by Dick Roe; on the south, do not know, and on the west, by Samuel Jones. Now this is a very common form of boundary, and perhaps one or all of the men's lands are bounded in the same way. I would recommend that the owners should be compelled to put suitable stone corners wherever their lands cornered at a tract corner, or where a tract corner came within the boundary of their lands. It often occurs that one man will own part of two or more tracts, and they pay no attention to the old corner. I would suggest making the owners responsible if the corners (original ones) were destroyed when occurring in their

lines or on their lands. The original corners are fast being destroyed; no one seems to think or care about preserving them. It would not be doing justice to attempt to put the corners of different tracts all in a straight line; it would cut off from many a farm and give to his neighbor. I may be too particular, but when one finds a man's land from one to ten rods longer than his deed calls for, and perhaps all corners gone, and no course or distance, it makes me think, change the law.

FAYETTE.—A. J. Gilmore.

Uniontown, *September 24, 1884.*

1. Meridian line established October, 1851, by John Patrick and Dennis Sutton, located in Uniontown, the county seat, east of the court-house, marked by two stone monuments, fifteen inches square at the base, and ten inches square at the top, four and one half feet high, set in solid masonry, one north and the other south of the eastern stone bridge over Redstone creek where the National road crosses said creek, the distance between the faces of the two monuments being eleven hundred and seventy-nine and eight tenths feet, as ascertained by triangulation on the 23d day of September, 1884, by Thomas Hazen and myself, the ground between them being too rough to be measured accurately without a great deal of trouble.

2. I have compared the report of Samuel M. Foust, of Connellsville, for last year, and find it to be a correct copy of the record up to that time. The following entries have been made since: A. J. Gilmore, 1884, April 7, at 2.30, P. M., 3° 22′; A. J. Gilmore, 1884, April 14, at 10, A. M., 3° 18′; Thomas Hazen, 1884, May 26, at 9, A. M., 2° 54′. The difference shown above in my instrument, I suppose, is owing to the first observation having been made in the afternoon and the other in the morning.

3. I cannot say much on this subject, as I have not been running any old lines on which the original corner marks are standing, but the following is the result of some of the work I have been doing lately:

In running some lines in last May, which had been run in June, 1785, I found them as follows:

In June, 1785—N. 44 W., N. 66 W., N. 49½ W.—S. 25 E., &c.

In May, 1884—N. 43½ W., N. 65½ W., N. 49 W.—S. 24½ E., &c.

Another survey, made in June, 1773, and the same lines run in May, 1795, on an adjoining tract, as follows, the first survey being a rectangular tract:

In June, 1773, N. 70 W. and S. 20 W.

In May, 1795, N. 72 W., S. 18 W.

In September, 1884, N. 71½ W., S. 18½ W.

My instrument being set to read the true bearings according to our meridian, which shows the magnetic bearing of my needle to be 3° 18′ west. The original marks on these surveys are gone, but my running corresponded very well with such marks as were found.

4. Under this head, I would say that the suggestions made by George Platt, of Erie, John B. Kaufman, of Franklin, and Theodore Vandivort, of Lawrence, in their reports of last year, are good, and coincide with my views.

FRANKLIN.—John B. Kaufman.

UPPER STRASBURG, *September 12, 1884.*

1. Meridian line is situate one and three quarter miles nearly east from Chambersburg, instead of three and three quarter miles, as erroneously stated in last year's report.

2. Ten instruments were tested at the county meridian this year, with the following results:

Engineer or Surveyor.	Instrument.	Date.	Hour of day.	State of the weather.	Declination.	Remarks.
Geo. M. Stenger,	Plain compass.	April 8 1884,	Between 10 & 11. A. M.	Cool. cloudy, drizzling rain.	3° 35′	
H. E. Wertz, .	Plain compass.	April 8, 1884,	Between 10 & 11, A. M.	Cool. cloudy, drizzling rain.	3° 45′	
J. B. Kaufman,	Solar transit.	April 8, 1884,	Between 10 & 11, A. M.	Cool, cloudy, drizzling rain.	3° 49′	Vernier reads to single minutes.
John W. Kuhn,	Vernier compass.	April 8, 1884,	Between 10 & 11. A. M.	Cool, cloudy, drizzling rain.	3° 55′	
F. J. Pfoutz,	Plain compass.	April 8, 1884	Between 1 & 2, P. M.	Cool, cloudy, drizzling rain.	3° 50′	
J. D. McDowell,	Vernier, .	April 11, 1884.			3° 55′	Vernier reads to five minutes.
A. B. Stowler, .	Surveyor's transit.	April 11, 1884	Between 11 & 12, A. M.	Cool and cloudy,	4° 18′	Single minutes.
S. M. Armstrong,	Compass, .	April 29, 1884,		. .	4° 00′	
J. C. Burns,	Compass, .	July 16, 1884,	. . .	Sunshine, cool and breezy.	4° 00′	
J. R. McElroy, .	Vernier compass.	Aug. 18, 1884,	4, P. M. . .	Cloudy, . .	3° 49′	Vernier reads to single minutes.

Average declination of ten instruments in 1884, 3° 55′ 36″. Average declination of eight instruments in 1883, 3° 50′ 26.25″. Apparent progression during year, 5′ 9.75″. Declination in April, 1852, 1° 39′. Progression in thirty-two years, 2° 16′ 36″. Annual change, 4′ 16″. Average declination of five instruments—tested same day (April 8, 1884,)—3° 50′ 48″. Annual change, 4.7″. It will be noticed from the above that five instruments were compared with the county meridian on one day and they agreed within an arc of ten minutes, whilst the other five, which were tested later and on different days in the same month, and in July and August, show a difference between the extremes of twenty-nine minutes. Whilst a part of the wide divergence is mainly due to the peculiarities of one or more instruments, it is confidently believed that there would have been a much closer coincidence in results had all the instruments been tested on the same day. But had the discrepancies been as large, or even larger, tests made simultaneously would have enabled each surveyor to become acquainted with the peculiarities and the behavior of every instrument tested by comparison with his own. By testing on different days, scattered over half a summer, when the electrical conditions must frequently be very unlike, this acquaintance is not so easily attained.

3. On the 9th day of October, 1884, at nine, A. M., I observed a meridian line here at home, declination, 3° 43′; at ten, A. M., 3° 46′; at twelve, M., 3° 49½′; at half past two, P. M., 3° 54′; at half past three, P. M., 3° 54′; the weather being clear and quite cool.

In September, various tests on the same line showed from 3° 50′ to 3° 52′; but in August, from 25th and some days after, results ranged from 3° 50′ to 4°, with intermediate values in the same day, showing considerable fluctuations as the day advanced and the heat increased.

On the 5th of June last, A. S. Winger, living near the south-west angle of the county, reported tests made that day on a meridian line of his own, showing an average declination of about 3° 36′. Last year, observations on his line differed about 10′ or 12′ from those he obtained at the county meridian, being about that much less in amount.

4. Under this head I have nothing new to add in regard to securing the greatest attainable accuracy in land-surveying. My views, which are unchanged, have been given in former reports, and are known. Many very excellent suggestions, by a number of engineers and surveyors, have been ably presented, that are probably more feasible. However, I would favor any legislation that will secure the use of better instruments, a higher grade of intelligence and skill on the part of surveyors, and consequently better work and better pay—in fine, that the average Pennsylvania land-surveyor be raised to the place he ought to occupy. I would, however, here enter my most earnest protest against the reckless and wanton practice of so many land-holders cutting down and destroying line and corner-trees, and afterward neglecting to replace such marks by permanent monuments, allowing the stumps to rot away, and the places they occupied lost. A line-tree, or corner-tree, happens to be suitable for lumber, bark, or cord-wood. It shades some land and its roots extend into the adjacent fields and injure the crop for some distance from the line-fence. Says A to B: "This tree would make such and such stuff; it spoils the grain; let us cut down the tree and divide it;" and forthwith down comes the stately oak of centuries, or the tall hickory, with its ancient marks, made when the wild whoop of the Indian resounded through the forests of the Cumberland valley. But too frequently is this vandal destruction practiced without asking for the consent of B, or any division of the lumber. We will charitably suppose that such persons have no adequate idea how important to the security and stability of the boundaries of their broad acres are the silent recording offices of nature. How, year after year, an additional ring of wood is formed and covers the axe marks made by the axe-man, who years ago has been called from the stage of life and is forgotten, and yet the marks made with his axe are as plainly defined and clearly cut as if it had been yesterday. But cut the tree down, and soon there is nothing to indicate the spot where it stood—nothing but uncertainty. Stumps are not always easily identified, and frequently it is but the work of a few years until all trace of them is gone—often to be fol-

lowed by differences of opinion and contention, and I have long ago learned, to my sorrow, that very frequently the persons who have taken least care to preserve or mark their lines or corners are the very ones to contend the most obstinately and vindictively for a very small strip of land which they imagine, or pretend to believe, belongs to them, whether it does or not. I, therefore, would favor legislation that would restrain such destruction of land-marks, and make such offences punishable in the criminal courts; and also such laws as to require the marking, by permanent marks, of lines and corners, by properly authorized persons, so as to prevent, as far as may be, disputes and litigation on account of lines or corners.

FULTON.—Jonas Lake.

SIPES' MILL, *November 3, 1884.*

1. Old meridian line established in 1856. It since has been obliterated and become useless. A new one was established on the 21st of August last by John B. Kaufman, county surveyor of Franklin, by request of the county commissioners, on the court-house grounds, lately a school property. It is marked by two marble monuments, set two hundred and thirty-two feet eleven inches apart, firmly set, and rising a convenient distance above the surface of the ground, the shape of the visible portion being rectangular—eight by eight inches—eighteen inches above ground; top of each stone is marked by cross lines of furrows corresponding with the cardinal points N., S., E., and W.

2. The variation of the different instruments registered is as follows: John B. Kaufman, county surveyor of Franklin county, August the 21st, 1884, solar transit at eight, A. M., 3° 55′ west; at half past nine, A. M., 4° 5′ west. Jonas Lake's compass, November 3, at one, P. M., 4° 10′. My method of obtaining the correct declination of my instument was to set the instrument on the southern point with the needle precisely at zero, and make a mark in the line of sight at right angle from the northern point; measure the distance from this mark to the northern point; then, having the length of the line and this distance, the declination from the true meridian was calculated in degrees and minutes.

3. The only reliable tests that I have made recently of the line made by myself in my first practice thirteen years ago I find the average declination to be 3′ nearly.

4. If the law of 1850 was enforced by having every surveyor of the several counties to meet at their county meridians and adjust their instruments at least once a year, say in the month of April; have a day appointed by the county surveyor or the county commissioners, and have each one thereafter to make their drafts from the true bearings instead of magnetic, a much more correct record would be obtained, and mistakes now made would be avoided in the future. I would recommend that every surveyor have a vernier compass which he could adjust to true bearings each year, and let it remain there until the next annual test; hence

no trouble or mistakes in changing surveys from magnetic to true bearings. I at present use the plain compass, owing to the inconvenience in changing the magnetic to true bearings. If my practice increases, I expect to purchase a vernier compass.

5. It is a well-known fact that many of our original surveys were badly made, especially in the distances. I generally find that an allowance of six perches to the hundred, or six per cent., comes very near the original marks where any trace of them are found of land surveys made, in 1794 especially. I would recommend that some legislation be enacted that resurveys be made on surveys known to contain more land than the warrants call for, caused by the bad chaining, so that the legal amount of purchase money be paid into the State treasury, and it would then be subject to taxation. I find some instances of vacant land being taken in and cleared and fenced and cultivated for years and no taxes or purchase money paid, This is wrong, and should be remedied.

HUNTINGDON.—John S. Lytle, C. S.

SPRUCE CREEK, *November 11, 1884.*

There was a meridian line established in the court-house yard, in Huntingdon, in the year 1852; the southern end was marked by an iron post, and the northern end by a stone. The stone was accidentally broken off at the ground in 1863. It was never repaired, and recently the iron post was removed. There was a book kept in the commissioners' office in which the surveyors of the county, or some of them, made yearly records of the magnetic bearing of their needles. The book has not been in the commissioners' office for several years. I have made search for it, but it cannot be found.

2. The variation is not the same in different places in this county, and the progression of the needle west has not been uniform in the same place—as the variation increases, the declination is more rapid. On the 18th day of last August, 3° 45′ variation had to be allowed in the northern end of this county to retrace the lines of a survey originally made in 1794. A portion of this included the diurnal variation. On the same day, at 1 P. M., the needle stood 13′ west of the point it occupied at 7 o'clock in the morning. A survey made in 1848 required on the 11th day of October last, in the morning, 2° 25′ allowance west to retrace the lines. This would be an average declination of 4′ per year for the last thirty-six years; but, as instruments sometimes differ, these tests cannot be entirely relied on as being correct. On December 2, 1883, I placed a telescope compass on a line that then bore N. 9° 13′ 45″ W.; on November 7, 1884, placed a transit on the same line, and the bearing was N. 9° 10′ W., a difference of 3′ 45″, making the declination about 4′ for the present year. On last Friday, November 7, 1884, I made an observation at a point in Morris township, and found the variation of my needle to be 4° 37′ west. I believe this to be nearly or entirely correct, and suppose it would be slightly greater in Huntingdon,

which is twelve miles east of this place. The surveys in this county were all made from the magnetic bearings at the time the work was done, and to trace the same lines now the amount of variation to be allowed on each separate survey depends entirely upon its date and location. The older and later surveys require the less variation. It is often the case that a line dividing two surveys has different bearings noted, one for each separate survey. So far as I know, there is not a line of land in this county that has its true bearing. I can see no practicable remedy for these errors, but accept and follow them as we have been doing for years. If there was a true meridian established in each township, and the land would all be resurveyed and made to conform to it, the remedy would be nearly complete. This county is rough and mountainous, and to accept any more accurate mode of surveying, would entail a great expense, and meet with some opposition. The lines would remain where they are, and the angles would be the same.

4. I would advise that the meridian line at Huntingdon be reëstablished and the law in existence be fully carried out regarding it. Every surveyor should have a line of his own near his home, and keep himself well informed upon the variation of his needle. Since its progression west, from this information rightly applied, with the use of a transit he can approximate very closely to the amount of variation to be allowed upon a tract of land of any date, and do the work nearly, if not quite, as correct as if the angles had been taken from a true meridian. It would be natural to suppose that the land-owners' interest would be sufficient to induce them to erect and maintain permanent boundary monuments without any law on the subject to compel them to do so, but my experience leads me to suppose that they do not desire to have their land well and permanently marked. I have often surveyed land when all persons interested were present and were well satisfied with the work, and when advised to jointly set in a stone as a permanent mark, they seemed not inclined to do so much work, but were entirely satisfied with a marked tree or a pile of stones. I believe in this matter they should be left to attend to their own interest, as they are in their other private affairs.

LUZERNE.—Charles H. Cooke.

DALLAS, *October 29, 1884.*

1. There is no meridian at the county seat. Undoubtedly has been reported before.

4. That strict measurements be made and monuments erected from some foundation or original survey; that all township and borough lines be permanently made crossing public highways; that original monuments govern courses and distances, regardless of fences that have been irregularly built and have stood for twenty-one years; that all surveys be made with flagman instead of using sight-trees.

5. The most careless surveying that I have seen done was by one of long experience, sighting at trees, taking a tree other than he sighted to

and ran a line from two to three perches from the original line, and setting back on the old line; the chain carriers doing their duty following the surveyor, and what course and what distance did the surveyor have when he got at the end of his line, I was unable to tell; but he noted it down, and believes it's so, and his marks are on the ground for future trouble. I suggest more careful surveying.

LUZERNE.—M. B. Trescott.

HARVEYVILLE, *October 21, 1884.*

1. No meridian line established by commissioners. No standard of measure established. Every one adjusts his own instrument. Much difficulty arises from this source. I have repeatedly called the attention of the county commissioners to this matter since 1854.

2. Having no meridian established, the true declination is scarcely to be ascertained. I find it to be about four and one fourth degrees. I get my test from the old and well-defined surveys of 1792–3. I find it about four degrees and thirty-two minutes.

3. My experience, extending over a period of about thirty years and a very large field of operation, I find to differ very much in different localities. My custom is to obtain a test on some well-established line in the vicinity of my work and adjust my variation to that, but this will not always hold good, owing to irregularities in the first surveys.

4. I cannot perceive that this can be reached entirely by legislation. The degree of accuracy depends entirely on the skill of the surveyor and care which he exercises, as well as the perfection of instruments used. The preservation of boundaries depends very greatly on their importance to the parties most interested and can scarcely be reached by legislation. Parties interested and local surveyors are the ones to preserve these monuments and the remembrances of their existence.

LYCOMING.—John S. Laird, C. S., and C. D. Eldred.

WILLIAMSPORT, *November 27, 1884.*

1. The commissioners of this county, we regret to say, have not complied with the act of Assembly of the 26th of April, 1850, in regard to establishing fixed marks designating the true meridian and a standard measure for two and four-pole chains; and consequently surveyors have no way to adjust their compasses or correct their chains annually as that law requires; therefore, the advantages of the law are lost to the public in Lycoming county, because no penalty attaches for a non-performance of the duty, and consequently the mistakes or neglect of the commissioners who were in office when the law was framed is inherited by those who have followed, and no remedy but a supplemental compulsory attachment can likely be applied. In the meantime, the *erratic* and constantly *varying* magnetic needle and the *elastic* chain will be laying the foundation for innumerable law suits, and the penny-wise and pound-foolish policy of our county officials will continue to prevail.

3. From our experience as practical surveyors, we find that lines made between the years A. D. 1810 and A. D. 1820 in this section bear at the present time the most variation, which indicates that the course of the needle was hereabout to the east until some time between those years, when it became stationary, perhaps in about A. D. 1815, at which time it began to travel to the west, at first slowly. Since A. D. 1820 it has been moving in the latter direction at the rate of about one degree in each sixteen years. An allowance, however, of variation under this rule will only approximate correctness. and cannot be implicitly relied upon, as there is often from a quarter to a full degree of difference in compasses. This may be caused by the position of the center-pin, by an injury to the needle, or by many other incidents; and besides, few surveys are free from errors made by those who ran the lines and with no fault of the compass. Therefore, there can be no certain test by which any line can be accurately re-traced.

4. We think any radical change in the present system of land-surveying, however desirable it may be, cannot be introduced and established, except by slow and cautious process. But many of the present imperfections can and ought to be corrected. There is no good reason why each practical surveyor should not trace the same line or run the same bearing very nearly alike in the same neighborhood by adjusting his compass with a common and fixed meridian, nor that measures between fixed points should not substantially correspond if all were to correct their chains annually by a common standard. But the county commissioners can, if they will, afford a remedy for these evils. Legislation is, however, needed respecting land-marks and boundary monuments. Few marks of surveys made one hundred years ago are now to be found even in thrifty timber, and, from necessity, re-surveys, often inaccurately made, are followed and adopted as the only alternative. It is true, the streams, when accurately marked on a draft, afford an indefinite guide, but are not conclusive evidence. Some other method must be adopted in the near future to perpetuate these fast decaying monuments. We would suggest that as the old corners die or are destroyed, whilst the evidence of their existence is indisputable, as well as those made by the consent of all parties interested, each should be replaced or marked by planting a live forest sapling, which might be supplemented by witnesses of different sorts. Give the county courts the power to designate the kind for corner and witnesses, say a white oak for the corner, a chestnut for the most northerly, an ash for the most southerly, an elm for the most easterly, and a maple for the most westerly, each two rods from the corner. Let the *fact* and the *time* be made a matter of record at the expense of the parties interested. Then make it a penal offense for the willful destruction of such monuments, and we shall continue to have *living* witnesses or land-marks which cannot be changed or destroyed without leaving immediate evidence of the fact, and often a clue to the guilty party.

5. Under the present law, the office of county surveyor confers a title without a business in many of the counties of the Commonwealth, and as

soon as the little *vacant* land remaining shall be appropriated, there will be no longer any duty for that officer to perform. Would it not be well now to anticipate the future by conferring, or perhaps transferring, certain duties to the county surveyor which now encumber the courts, or are neglected for want of a responsible head? The records relating to the establishing of county roads and bridges, and the whole machinery of making orders for opening, changing, and repairing them, might be profitably entrusted to the county surveyor. He should be made responsible for the grades of new roads, and have power to prevent the issuing and payment of orders until work is done in proper manner and according to specifications. In fact, county surveyors should be, *ex-officio*, the superintendents of county roads and bridges, with sufficient authority, at least, to correct manifest abuses and curb unjustifiable expenditures, which we all know prevail in many townships of every county of the State, and swell the volume of road taxes without an equivalent in work.

NORTHUMBERLAND.–J. R. Hillbush.

MAHANOY, *October 31, 1884.*

2. Here is a record of my own compass; Edward Draper, of Philadelphia, maker of same:

		Variation.		
On April 18,	1879,	4° 57′,	9, A. M.,	clear day.
May 3,	1880,	5°,	9, A. M.,	do.
May 28,	1881,	5° 10′,	noon,	do.
May 8,	1882,	5° 10′,	8½, A. M.,	cloudy.
July 17,	1884,	5° 10′,	8, A. M.,	do.

3. I find, on retracing lines, that the variation on an average is about 1° in eighteen years, as a general rule, for surveys made since 1800. I also find that surveys made about the same time by different instruments will not always have the same variation.

4. If a law could be made to keep incompetent surveyors out of the business, much trouble could be avoided that we are annoyed with now-a-days.

NORTHAMPTON.–Milton H. Cole.

KREIDERSVILLE, *November 6, 1884.*

1. There is no meridian line established in our county.

4. First. As accuracy depends principally on the operator, I think a law of prime importance to secure accuracy would be that every surveyor, before allowed to practice, be required to pass an examination in the science of surveying, and be registered in the prothonotary's office of the county in which he resides or practices; and no survey to go upon record unless made by a man so qualified. This would rule out all bunglers. Examinations, for the first time, might be held in each county, and be conducted by a board of three competent and practical surveyors, appointed by the State. These examinations, in order to be fair and uniform throughout the State,

should be written, and the questions be prepared by the Secretary of Internal Affairs. The board of examiners, after examining the papers, should send them to the Secretary of Internal Affairs, who should issue certificates to those qualified, that is, to those answering a certain per cent. of all the questions, whereby they be authorized to practice for life anywhere in the State. After this, yearly examinations might be held at Harrisburg, conducted on the same plan. Second. Further, I would recommend that the use of inferior instruments be prohibited. Some are surveying yet with old compasses, many of which contain impure metal, or are imperfectly graduated. The old clumsy iron chain, with unbrazed links, is also used yet by many. Third. All hilly lines should be measured on the slope as well as horizontally, and on every deed should be drafted the tract or tracts conveyed. Both horizontal and slope distance might be entered on this draft in the form of a fraction, thus ($\frac{24}{25}\frac{2}{3}$,) of which the upper number would represent the horizontal distance, and the lower the distance on the slope. Fourth. Surveyors should be required to set corners, and not only drive stakes as is generally the custom.

5. The law of 1850 ought to be superseded by something better, and something made more imperative.

PERRY.—William J. Stewart, junior.

DUNCANNON, *October 8, 1884.*

1. So far as I can learn, there has never been any meridian line established in this county, or any fixed standard measure.

3. I find, very often, in retracing boundary lines in this county, that the courses and distances, as laid down upon old drafts, are only approximately correct, and do not serve as a criterion to establish the declination of the needle since the survey was made. In retracing lines, ran June 20, 1853, in Juniata township, this county, I found August 1, 1884, on line No. 1, declination since June 20, 1853, 1° 56′ west; on line No. 2, 2° 11′ west; on line No. 3, 2° 0′ west; on line No. 4, 2° 0′ west; on line No. 5, 0° 12′ west; on line No. 6, 2° 14′ west; on line No. 7, 3° 52′ west; on line No. 10, 1° 8′ west; on line No. 12, 2° 0′ west; on line No. 13, 0° 28′ west; on line No. 14, 1° 0′ west; on line No. 15, 3° 6′ west; on line No. 16, 0° 50′ west, which gives us the mean annual westward progression of the north end of the needle of 3.41 minutes.

The above observations were all boundary lines of the same farm, (Huston McNaughton's.)

4. All corners should be of iron or stone, sunken deep into the ground, and the horizontal angles of permanent monuments of verification taken at each corner, independent of the needle. These monuments of verification should be of iron or stone, established in each township, upon prominent natural objects, such as mountains.

5. Whenever land-owners are willing to pay a fair compensation for accurate work, and lend the surveyor sufficient competent help to assist him,

and men not properly qualified by previous mathematical and scientific training are excluded from the profession, then, and not until then, we may expect a better standard of work.

PIKE.—John Layton, C. S.

DINGMAN'S FERRY, *October 30, 1884.*

1. Described in former report.

2. The declination of the needle of both my compasses made by B. Pike and Sons, New York city, is a little over 6° west, but, as mentioned in a former report of mine, the proximity of ferruginous matter, iron water-pipes, &c., throws suspicion upon the meridian line, if *meridian line* it may be called.

The annual progression appears to be between three and four minutes westward, with considerable, though not absolute, regularity, for within a few years the progression appears, in my locality, to have somewhat increased.

3. In 1865, I surveyed nearly all of the outside lines of the Shohola property in Pike county, containing over eight thousand acres, being made up of eighteen contiguous tracts, some of which were surveyed as early as 1754, the balance in 1787. In making a recent survey, I found that during the nineteen years that elapsed since my former survey, the needle had declined fully one degree westward—the north end—being a trifle over 3′ per annum. The variations on the lines of the survey of 1787 I found to be $3\frac{1}{2}$° west, while to trace the lines of 1754, an allowance of over 4° was required.

I will here state that surveys made about 1793 require full 4°, as much as those of 1754 and more than those of 1787, which seems to argue a reversal of declination between those periods or an uncommon, a wonderful, disagreement of instruments. It is held by some that James Scull, who made most of the surveys in this locality prior and subsequent to 1754, as late as 1775 noted on his drafts the meridian-bearing and not the magnetic, but this cannot be unless our meridian line is very erroneous.

4. The act of 1850 was a step in the right direction to obviate errors in surveys and good as far as it goes, but it ought to go further. It makes it penal to not test the compass, but is silent as to testing the surveyor who uses it. It makes it penal not to test the chain, but is silent as to chain-bearers. True, the county surveyor must be practical, and is required and authorized to administer oaths to chain-bearers of good morals, but this is the case only when the work relates to the Land Office. The surveyor should pass an examination as well as his compass and chain.

As to monuments, the question is, to my mind, more easily asked than answered. An effective law would greatly lessen the number of land suits. It would seem that if "to destroy land-marks" is a misdemeanor, it is a crime of not much less magnitude to suffer them to be removed or disappear, either by time or the elements. That part of the Shohola property

surveyed in 1787 calls for thirty-three outside corners, only three being stone, the rest trees. In 1865, only two of the tree corners were to be found, both dead; and now a portion of the stump of one remains, not a vestige of the other, a yellow pine, remains, the forest fires having completely consumed it. The finding of those two reliable monuments inspired confidence that I was on the right track, after having searched in vain for other tree corners whose sites I had passed. If the place of those thirty perishable trees had been supplied years ago with firm stone corners, much time and perplexity would have been saved, and the original boundary determined with certainty. But an accurate survey made according to the draft will trace but very few of the lines of our original surveys, the distance called for seldom reaching the corner—sometimes falling short of it.

UNION.—John R. Follmer.

ALLENWOOD, *October 29, 1884.*

1. A meridian line was established by Professor C. S. James, of the Lewisburg University; and R. F. Brown, civil engineer, using a surveyor's transit manufactured by W. & L. Gurley, Troy, New York, in the campus of the university of Lewisburg, January 6, 1869, by the erection of two marble monuments put in hydraulic cement. The commissioners of the county had placed in the hall of the court-house the correct length of a surveyor's chain.

2. Declination, when established, 4° 11′ west. Declination, October 1884, 4° 57′. Declination about 3′ annual by same transit with which the monuments were established.

4. That all surveyors should be sworn to perform their duty carefully and impartially, and licensed by the county court, and no one permitted to survey unless qualified, (that is, having studied the theory and practice of surveying,) and empowering the surveyor, after having been licensed, to administer an oath to each chain-carrier to perform his duty faithfully, and making it an indictable offense of both surveyors and chain-carriers if they did not perform their duties according to the law in such cases made and provided, and making it obligatory on the person whose land was to be surveyed to notify each and every person who owns adjoining land to be present, and, if all parties are satisfied with the location of the corners, the surveyor to have a substantial stone or metallic monument placed at the point or corner as agreed upon by the parties present.

WARREN.—D. F. A. Wheelock.

LOTTSVILLE, *November 24, 1884.*

1. The annual declination of the needle is same as in my last year's report, viz: 4′. All other questions have same answers as last year's report.

WAYNE.—L. S. Collins.

Cherry Ridge, *October 30, 1884.*

1. There is no meridian line or fixed and standard measure for two and four-pole chains in this county at the present time. Our county commissioners have made arrangements for establishing a true meridian line this autumn, and probably the line will be marked on the ground within the space of three or four weeks from this date. Should this be the case, I will then advise you in regard to the location, manner of marking, &c.

2. According to the best data I have, the present declination of the needle from a true meridian is 7° 25′ west, the reading having been taken about six o'clock, A. M., at Cherry Ridge. The observation was at an elongation of Polaris. By an observation of Polaris when at its meridian passage by time taken in Honesdale, and the reading about midnight, the declination was 7° 30′ west. The latter instrument, a Gurley transit; the former, a Gurley compass.

WAYNE.—L. S. Collins, C. S.

Cherry Ridge, *November 25, 1884.*

1. There is now a true meridian line established in this county. It is located in the public square or park in the borough of Honesdale, the county town. Was established November 21, 1884, by Montrose Barnard, C. E., of Scranton, Pa., assisted by Phineas G. Goodrich and L. S. Collins, county surveyor. It is marked by posts of granite set in the ground at a distance of two hundred and twenty-eight feet apart, from center to center. The posts are seven feet eight inches long, resting on a flag-stone at the bottom, and are in the ground about six feet For a distance of about three feet from the bottom up they are set in cement—concrete—and then up to the surface of the ground are in gravel and sand One foot eight inches of each post that projects above the ground is dressed. The south stone is twelve inches square, and the north stone nine by twelve inches. The meridian is marked on the south stone by an × cut on the top, on the north stone it is marked by a brass plate bolted to the south face of the stone marked with a +, and painted in form of a target.

2. The declination of the needle from this meridian, November 25, 1884, was tested by Mr. Barnard's (Gurley) transit, 7° 35′ west, and by L. S. Collins' (Gurley six inch vernier) compass, 7° 25′ west, which is the same declination as shown by the same compass in an observation taken at Cherry Ridge in September last.

There is yet no standard measure fixed for chains.

WASHINGTON.—R. J. McCleery, C. S.

West Alexander, *September 12, 1884.*

1. I see by your last report the meridian line established in this county has been described. The iron fence is so near the southern mark that it makes 6′ difference at the different points in the line.

2. I tried my new Heller and Brightly transit May 8, 1883, and found it west 2° 12′. Again, September 22, 1884, and found it west 2° 19′, making 7′

in sixteen months, which I am satisfied from other observations is too much. Similar results soon led surveyors to neglect to test their instruments and make records, hence I find no record that will justify any definite conclusion about the declination of the needle. My own experience, together with those in whom I have confidence, leads me to believe that the needle has declined 1° in sixteen years, or an average of 5′ 45″ in one year.

4. If there could be a law enacted with proper penalties, making it the duty of owners of real estate in the near future to ascertain and mark their boundaries, it would contribute largely to the peace of society. There is no time that this could be done better than the present, and there is no one thing that land-owners are more recklessly careless of than permanently marking their boundaries. No difference how much difficulty a surveyor may have in finding a corner, they will drive in a stake and say they will set in a stone, but this is the last of it until the surveyor has to be called again.

WESTMORELAND.—Samuel N. Ferguson.

GREENSBURG, *October 18, 1884.*

1. A meridian line was established in 1853 on the public-school grounds in Greensburg borough, and it consists of octagonal stone monuments four feet high and tapering from one foot square at the bottom to six inches square at the top, and are at present of no practical use. The monuments have been thrown down, and set up and changed out of their true position. The present declination of the needle from this meridian, as nearly as can be ascertained, is 3° 7′ west. The annual change 6′.

2. 6′ per year.

Twenty-one instruments were tested at various times last April, variation rating from 2° 15′ west to 3° 25′ west.

Hon. John Clement, Secretary Surveyor's Association of West New Jersey.

HADDONFIELD, N. J., *August 29, 1884.*

Honorable J. SIMPSON AFRICA:

DEAR SIR: Yours of the 26th instant received. I regretted exceedingly my absence from the meeting at Bridgeton, on the 12th, but the Governor called a court of pardons, and I was required to give my attendance.

As requested, I send you copies of the various trials since the last publication, which I hope are what you want. The trial at Woodbury was unsatisfactory. A new jail had just been erected, and the cells built of iron, which evidently affected the needles. The line was extended by stakes, and the trouble avoided, in part, by taking the instruments to the opposite end of the line, but the test was not considered satisfactory even with that precaution. If you use either, my advice would be to take those in the last column; and even then you had best add a note stating how the test was brought about, and the reason for the doubt, &c.

Hoping to meet you at some future meeting,

I remain, &c.,

JOHN CLEMENT.

August 9, 1881.

The members of the Surveyor's Association of West New Jersey tested their instruments on the "points" established by law, in the court-house yard at Mount Holly, Burlington county, New Jersey, with the following results:

Time, 2 o'clock, P. M. Thermometer, 82° in shade.

William Parry,	transit,	6° 50′	west of north.
Henry S. Haines,	"	6° 40′	" "
J. Franklin Peacock,	compass,	6° 40′	" "
James Wills,	"	6° 52½′	" "
Edmund Braddock,	"	6° 50′	" "
William Dyer,	"	6° 35′	" "
James Lippincott,	"	6° 50′	" "
Clayton Lippincott,	"	6° 38′	" "
Naaman W. Haines,	"	7° 00′	" "
Frank Earl,	"	6° 50′	" "
George W. Harker,	"	6° 50′	" "
Second trial:			
J. Franklin Peacock,	"	6° 50′	" "
William Dyer,	"	6° 52′	" "
Henry S. Haines,	transit,	6° 55′—6° 48′.	

COURT-HOUSE YARD,
MOUNT HOLLY, *August 8, 1882.*

Time, 11.20, A. M. Thermometer, about 90°.

J. Franklin Peacock,	compass,	6° 52′	west of north.
Samuel H. Chambers,	"	7° 00′	" "
Clayton Lippincott,	"	6° 53′	" "
Franklin B. Haines,	"	6° 47½′	" "
Levi French,	"	7° 00′	" "
Henry J. Quick,	"	7° 00′	" "
Charles Whitney,	"	6° 40′	" "
Henry S. Haines,	"	6° 53′	" "
William Dyer,	"	6° 50′	" "
William M. Carter,	transit,	7° 10′	" "
Henry S. Haines,	"	6° 45′	" "

COURT-HOUSE YARD,
WOODBURY, GLOUCESTER CO., *August 14, 1883.*

Time, 12, M. Thermometer, 80.

The test was unsatisfactory, by reason of local attraction from buildings and fences.

		On points fixed by law.	*On points beyond, in line of points fixed by law.*
Franklin B. Haines,	compass,	3° 43′ W. of N.	5° 59′ W. of N.
Henry J. Quick,	"	3° 45′ "	6° 03′ "
James Lippincott,	"	3° 55′ "	6° 07′ "
Charles Whitney,	"	3° 43′ "	
Howard Parry,	"	3° 48′ "	
Elias Wright,	"		6° 32′ "
Henry S. Haines,	transit,		5° 55′ "

COURT-HOUSE YARD,
BRIDGETON, CUMBERLAND CO., *August 12, 1884.*
Time, 10.30, A. M. Thermometer, about 70°.

Frank Earl,	transit,	5° 12′ west of north.
James Lippincott,	compass,	5° 08′ " "
Howard Parry,	transit,	5° 15′ " "
Clayton Lippincott,	compass,	5° 20′ " "
William Lake,	"	5° 20′ " "
Belford E. Davis,	"	5° 05′ " "
Ezra Stokes,	transit,	5° 21′ " "
William M. Carter,	"	5° 18′ " "
Henry S. Haines,	"	5° 15′ " "
John J. Shute,	"	5° 18′ " "
Firman B. Sheppard,	compass,	5° 20′ " "

A true copy from the minutes, August 29, 1884.

JOHN CLEMENT, *Secretary.*

[Remarks.—A common source of error overlooked by most engineers and surveyors, and one to which many of the differences in the readings of needle instruments may be attributed, is that the meridian of the graduated compass-box does not coincide with the line of sight. This error can be corrected only by the instrument-maker, and should be avoided before any instrument leaves the manufactory.—J. S. A., *Sec. Int. Aff.*]

REPORT ON THE SURVEY

OF THE

WEST VIRGINIA AND PENNSYLVANIA BOUNDARY, 1883.

C. H. Sinclair.

Colonel James Worrall,

Chairman Pennsylvania and West Virginia Boundary Commission:

Sir: I herein present for the consideration of the Pennsylvania and West Virginia Boundary Commission a full report on the survey of the meridian and a part of the parallel boundary between the two States.

The superintendent of the U. S. Coast and Geodetic Survey directed me to attend the meeting of the commission, held in Pittsburgh, on April 10, 1883, where it was decided to call in the services of the Survey to execute the wishes of the commission. Having been detailed by the superintendent to take charge of this work, I was engaged during the latter part of April in securing such instruments as should be needed and making arrangements for the prosecution of the survey. As I had been informed that the Pennsylvania and Ohio boundary, for a distance of 30 miles north of the Ohio river, was a true meridian, and that the first stone south of the Ohio, marking the north end of the Pan Handle of West Virginia, was in the same meridian, it seemed to me more advisable to prolong this meridian to the south-west corner of Pennsylvania than to start at the south-west corner, itself a point not marked with great precision, and run north to the Ohio. To this plan the Executive Committee assented, though, as far as the practical survey was concerned, it made no difference where the work started—the question was simply one of convenience.

By previous arrangement, the party met at Smith's Ferry, Pennsylvania, on May 2, the commission being represented by Mr. James McCullough, from Pennsylvania, of the Executive Committee, and Mr. W. W. Walker, of Pennsylvania, who had been on the Pennsylvania and Ohio boundary, and was familiar with the points north of the Ohio. A few days later, Mr. F. L. Hoge, from West Virginia, and a member of the Executive Committee, arrived. The party was detained several days at Smith's Ferry waiting for the arrival of instruments and the full complement of its members.

This time was utilized in reconnoitering as much of the line as was accessible from Smith's Ferry, securing team and the various details of organization.

The general plan of operations was as follows: After having ascertained the direction of the meridian through the apex of the granite monument marking the south end of the Ohio and Pennsylvania boundary, to secure as long sights as possible with the large transit, locate points on the prominent ridges at convenient distances, and interpolate intermediate points with a smaller transit in charge of an assistant, who was to measure the line also and find all of the old monuments and other authentic marks, making offsets thereto and locating them with respect to the main transit line.

The instruments used were a 10-inch repeating transit theodolite, U. S. C. S., No. 82, which read to five seconds on its horizontal circle by four verniers. A vertical circle was attached, removable at pleasure, for observing time over the three vertical wires of the diaphragm.

The horizontal axis was perforated and provided with a mirror for illuminating the cross hairs by reflecting the light of a lamp that rested upon a support projecting from one standard; a counterpoise to the lamp was on the other standard. A diagonal eye-piece was employed when observing for time. All the astronomical attachments were removed when the transit was used for ranging out the line. A six-inch Brunner repeating theodolite, U. S. C. S., No. 67, read to ten seconds by two verniers. The telescope was provided with telemeter or stadia wires for reading distances, and a vertical arc for noting the angles of elevation and depression. A graduated rod, a Gunter's chain and pins, a steel tape, two pocket heliotropes for ranging in points at long distances, two pairs of field-glasses, a draw telescope of high power, and, finally, a Parkinson and Frodsham chronometer.

The party was organized in three divisions: first, the head line, with axemen for clearing out the line of sight, and provided with range poles and a heliotrope; second, the large transit under my own charge; third, the small theodolite under charge of Mr. C. H. Van Orden, United States Coast and Geodetic Survey, my principal assistant.

All things being ready, on Monday, May 7, the large theodolite was located at station "A" of the main line, a point 4492.3 feet south of the Ohio and Pennsylvania monument, on land owned by Mrs. Bucher, overlooking the Ohio and commanding an extensive view both north and south. Azimuth was determined by twenty observations on Polaris, and the chronometer correction by means of three time stars. Clouds put a stop to the observations. For the determination of azimuth, a bull's-eye lamp was located about one and a quarter miles north, in a box firmly nailed to a stub driven into the ground and braced securely. A half-inch hole in the box reduced the light, approximately, to the size of the azimuth star. First the light was pointed on and the horizontal circle read, then the star was pointed on three times, the time by the chronometer being noted and

circle read at each pointing; then the instrument was revolved in azimuth 180°, the telescope reversed, the star pointed on three times as before, the chronometer time noted and circle read; and, lastly, the light was pointed on and circle read, completing one set of observations. The striding level was read in both direct and reversed positions of the telescope, on mark and star, and the corrections applied in the computations. The star's position in its orbit being located at the time of observation by the chronometer, it was referred to the meridian by the usual computation, and thus the angle between a fixed terrestrial point and the meridian became known. Generally three sets of azimuth were observed each night, and from three to eight time stars for determining the error of the chronometer. As it was very convenient to do so, azimuth was determined by twenty-four observations on Polaris the night of the 8th also, and the chronometer error on seven time stars. The forty-four azimuth observations agreed in a most satisfactory manner. Consequently, next day, May 9, the angle between the fixed terrestrial point and the meridian was laid off and the ranging out begun.

Prior to this date, Mr. Van Orden's party was engaged in determining the length of the line, north of the azimuth station, to the Pennsylvania and Ohio granite monument, crossing the river and locating the old monument south of the Ohio. As the country was very hilly, chaining would have given inaccurate distances, so small triangulation was decided upon by Mr. Van Orden as being most expeditious and satisfactory for measuring the line. His method was to determine the length of short bases either with the chain or stadia, and measure such angles as were necessary for computing the distance. Had the line been chained, much time would have been consumed in clearing a way for the chainmen through the thick underbrush in the woods and through briars and small growth along the fences. At each station three stubs were firmly driven into the ground to receive the tripod of the large transit. This precaution kept the legs from settling, and the jar from moving around the stand produced very little effect on the instrument. The sun was not allowed to shine on the instrument, as the unequal expansion of the brass would throw it out of level. A large umbrella was used as a sunshade, and this also kept off the wind in a great measure, though generally the sun affected the instrument more than the wind.

The system of back sights was used exclusively for ranging out the line. At the back station, a signal composed of scantling, a straight rail, or pole, with cross-pieces nailed on, and from ten to sixteen feet high, was carefully plumbed over the point, or in exact line. These signals had both white and black muslin tacked on them, so as to be conspicuous either when the background was the green fields, woods, or the sky. They could be seen from a great distance, in one instance for nearly seventeen miles, early in the morning or late in the afternoon when the atmosphere was steady. Having located the instrument at the forward station, it was care-

fully adjusted and the telescope pointed on the back signal; it was then made to transit through the standards, and the forward point ranged in. After this the instrument was turned in azimuth 180°, the back signal again pointed on, the telescope turned through, and the forward point tested. If the collimation was not perfect, the two pointings would not agree, and their mean position was taken as the true point.

For short sights, say up to two or three miles, a range pole of the best white pine, well seasoned, two inches in diameter, eight feet long, shod with hard brass, and painted in white and red stripes each two feet in length, was used. A disc of tin covered with white cloth, (as white paint was not convenient,) was centrally placed on the rod, so as to catch the eye readily, but the foot of the pole was used for getting into line. The pole also had a small white flag attached to the top. For the longer sights, a pocket heliotrope was employed at the forward end instead of the pole. Of course this instrument could only be used when the sun was shining, but it enabled us to get lines of sight of the greatest length permitted by the topography of the country, and which would have been utterly impossible by the ordinary method of flag signals. The pocket heliotrope, so called from its compact form, the entire instrument being packed in a case $5\frac{1}{4} \times 2\frac{3}{8} \times 1\frac{1}{4}$ inches, was made by Messrs. Fauth & Co., of Washington, D. C., after Steinheil's design. Its reflecting mirror is $1\frac{3}{4} \times 1\frac{1}{4}$ inches, and has a small hole in the center through which the sunlight passes to a lens; a piece of chalk adjusted to the focus of this lens reflects an image of the sun, which furnishes the means of directing the light to any point desired. Both the forward and back parties being provided with one of these convenient instruments, communication was held by sending flashes of sunlight according to a previously-arranged code.

From the first (or astronomical) station, a sight of 1.9 miles was obtained to Stewart's hill, and the vista cleared of all obstructions. The instrument was then moved to this station, and the second sight taken to a point 1,600 feet south. From here a sight of 1.5 miles to Nickle's hill was obtained; thence on Ramsey's hill, a distance of three miles, where the party was detained by considerable timber. The next sight carried us one mile further to Carson's hill, in an old orchard. From here a sight of 3.1 miles was secured to Cross' hill, and, as the line was now diverging from the old monuments at the rate of nearly one foot per mile, I deemed it prudent to observe an azimuth. One night was devoted to this by making twenty-four observations on Polaris, and the chronometer correction was determined by means of five time stars. We had here a back line of 3.1 miles to test on, and the agreement of the azimuth was far within the limit of error, being only $2''.5$, or practically perfect. The forward sight from here was only 0.7 mile, but from this second point was obtained a fine sight of 7.4 miles to Mrs. Gardner's hill, beyond the Pan Handle railroad. This sight was succeeded by one of 7.1 miles, on land of Dr. Parkinson, abreast of Independence, then by one of 9.5 miles to Rice's hill near West Alex-

ander. From Rice's hill the signal on Gardner's hill, 16.6 miles north, was seen in range with the signal at Independence. South of here two fine sights were obtained, one of 7 miles to Haneytown or Dallas, and one of 10.9 miles, the longest on the line, to Poland's hill, below Rocklick.

At this point the line was again tested, azimuth being determined on one night by twenty-four observations on Polaris, and the error of chronometer by six time stars. This azimuth was as satisfactory as the other, showing the line to be only 2″.4 in error, or within the power of pointing of the theodolite. From this third astronomical station, and south of it, were obtained the following sights: To Sickle's hill, 1.2 miles, then 4.9 miles to Griffith's hill, and, lastly, 4.3 miles to a point 1,586 feet below the south-west corner. Here the divergence was 54 feet 5½ inches.

When the date of tracing the first line and the imperfect instruments are considered, this agreement between the two lines shows very satisfactory work done nearly one hundred years ago. I have seen no record that describes the instruments and methods used by these early surveyors, but we know that they represented the best skill of the day. Their gravest mistake consisted in not marking the line in a permanent manner. They used such stones as could be conveniently found, none of them dressed, and nearly all small enough to be moved by the strength of one man. Of the old monuments, twenty-four were found, twenty of which were considered authentic. Careful inquiry was made in regard to the position of each from the oldest inhabitants and such surveyors as chanced to be out on the line during the progress of the survey. Other indications of the line, such as line fences, marked trees, old corners, and the like were noted, but a sufficient number of good stones were recovered to enable us to reproduce the line without great difficulty.

I now propose to describe the old line as mapped from the most authentic stones. The initial for distance will be the first old stone on the West Virginia side south of the Ohio, thus following the order of tracing the line.

For the first 2.55 miles, the line is almost parallel to the true meridian through the Ohio and Pennsylvania granite monument and at a mean distance of 10.6 inches west, then for 0.57 miles it bends slightly to the east, crossing the meridian till the deviation becomes 2½ inches east. Between this point and the next, a distance of 3.88 miles, it takes a bend to the west, diverging at the 7.00-mile point 5 feet 1 inch. Between the next two stones, there is a still greater bend to the west, amounting, at the distance of 8.01 miles, to 9 feet 9¾ inches. Then comes a bend to the east for 0.77 miles, when the divergence is 8 feet 5½ inches.

This last stone, 8.78 miles from the initial, is abreast of the grave of Judge Reddick, a fine line-mark in itself, as the enclosure is made of large cut stones, built up to the height of about 5 feet, and will last for ages. The portion between the next three stones slightly diverges to the west, being at the 11.08-mile point 11 feet west. Here the first check-azimuth was observed. At 11.7+ miles, the divergence is 12 feet 8½ inches. From

here there is no stone for 4.02 miles, 15.81 from the initial, when the divergence is 16 feet. The next shows a slight bend to the west, being 18 feet 7 inches at 17.20 miles, when the line turns eastward slightly, and runs almost parallel to the meridian to the next stone at 19.22 miles, where the offset is 18 feet. At 21.08 miles, the offset is 20 feet 11 inches. From here the line is almost straight, diverging slightly to the west for 27.9 miles, or at the distance of 48.98 miles, where the offset is 32 feet 8 inches. At this point, the bend to the west increases slightly, but the line continues uniform in its divergence to the south-west corner of Pennsylvania, where, as before mentioned, the offset amounts to 54 feet $5\frac{1}{2}$ inches west of the meridian. In the last 15 miles there were three good line stones.

After the condition of the line was reported to the Joint Commission at its meeting in Pittsburgh on July 3, it was decided to accept the old line as reproduced, with such corrections as would make it a straight line. This straightening caused very little difference to the land-owners, and only took off from West Virginia 10.4 acres in the distance of 63.6 miles, adding, of course, that much to Pennsylvania. The accepted line, which is now marked by substantial stone monuments, may be thus defined: That portion of the line north of the first monument on the West Virginia side, south of the Ohio, is in the meridian passing through the apex of the granite monument that marks the Ohio and Pennsylvania boundary. From this first stone south of the Ohio to the south-west corner of Pennsylvania, a distance of 63.6 miles, the boundary is a straight line, diverging from the meridian at the rate of nearly $10\frac{1}{4}$ inches per mile, or 33.4 seconds of arc.

After having decided upon the line to be marked as the boundary, Mr. Van Orden took charge of the computations necessary for straightening it, and set the pegs, each with a tack in it, to indicate the point where the stones were to be set. The executive committee concluded that the presence of an engineer was not necessary in setting the stones. Consequently, the entire business of contracting for the stones and setting them was under their charge. I fully agreed with the committee in this arrangement. In addition to having the boundary marked, the meridian itself was preserved by five extra stones. The following sections of the meridian are intervisible, and are intended also for the use of local surveyors to test their needles.

Counting from the south-west corner of Pennsylvania towards the north, the first section is from Poland's hill, near Rocklick, to Dallas or Haneytown, 10.9 miles. The second section from Dallas to Rice's hill, near West Alexander, 7 miles. The third section from Rice's hill to Independence, on land of Doctor Parkinson, 9.5 miles. The fourth section from Independence to Mrs. Gardner's hill, 7.1 miles. The entire distance from Rice's hill to Gardner's hill, 16.6 miles, can be seen. The fifth section is from the first stone on the West Virginia side, south of the Ohio, (the initial in running the line,) to the Ohio and Pennsylvania granite monument, 2,723.9 feet. These five sections of the meridian are well enough distributed to be

accessible to all the surveyors along the north and south line. From the meridian the distance of each line-stone is known, so that there will be but little trouble in restoring any doubtful stone to its true position, should it be moved by designing persons.

A table of these distances and all the data of the line will be found in the accompanying report of Mr. C. H. Van Orden, [pages 62 A, &c.] The party remained in the field from the first week in May till June 26, the date of completing the principal ranging-out, when it was disbanded, with the exception of Mr. Van Orden's section, which was discharged June 30.

Astronomical Work.

Before completing the large transit work on the north and south line, I mentioned to the executive committee that it would be a favorable time to determine the longitude of the south-west corner, as there was a Coast and Geodetic Survey party in Louisville, Ky., at that time engaged in longitude work, and that it would only be necessary for me to get the requisite instruments from the Coast and Geodetic Survey office, and connect with Louisville by telegraph, thus saving the expense of organizing two parties for the longitude determination. I was, accordingly, authorized to make arrangements for the longitude work, which action of the executive committee was subsequently endorsed at the meeting of the Joint Commission, in Pittsburgh, July 3. On June 26, I proceeded to Washington and secured the instruments; then I went to Baltimore and arranged with the Baltimore and Ohio Telegraph Company for a circuit between Littleton, W. Va., the nearest telegraph station to the south-west corner, and Louisville, Ky. I afterward found out that it would be cheaper to get a Western Union Telegraph circuit between Smith's Ferry, Pa., and Louisville, as the Coast and Geodetic Survey station in Louisville was already connected with the Western Union office, while it would have been necessary to build a loop two miles long in Louisville to connect with the Baltimore and Ohio Telegraph office there. Arrangements were perfected, and the instruments set up at Smith's Ferry, and on July 17 and 18 longitude signals were exchanged with Louisville.

The next day, the 19th, came the great strike of the telegraph operators, which caused the work to be practically suspended. Had it not been that I was engaged in observing latitude at the same time, I would have stopped operations at Smith's Ferry; but that being the case, and as there was every prospect of the strike terminating in a few days, I waited, hoping to get the wires connected through.

Having finished the latitude observations on July 26, I intended further to wait until the 1st or 2d of August before giving up all hopes of completing the longitude work. On August 1, I was summoned home by sad family affliction, and remained eight days. Upon my return, I was promised the use of the telegraph line at once. This was not a success till August 13, when a through wire was obtained and signals were exchanged,

but, unfortunately, it clouded up, so that the observations for time at Smith's Ferry were lost, and the night's work of no value. Having received a letter from two of the executive committee to the effect that the longitude work had better be given up on account of the great delay caused by the strike, I resolved to discontinue observations, and packing up the longitude instruments next day shipped them to Washington.

Before making any preparations for longitude work at Smith's Ferry, I had located the zenith telescope alongside the Ohio and Pennsylvania granite monument for determining its latitude. Although the instrument was set up on July 6, cloudy weather prevailed so that observations were not begun until the night of July 10. I was very much interrupted on the partly clear nights by clouds, only obtaining a portion of the stars in the latitude list, and it required seven nights of this broken work to secure sixty good latitude observations. At this place, also, the value of the micrometer was determined by two nights' observation on Polaris, through eastern elongation.

The longitude station at Smith's Ferry was located near the hotel kept by Mr. Jesse Smith, on the side next to the Ohio, and not far from the river bank. It consists of two stones set thirty-three inches apart, from outside to outside. Between them is a short stone, nearly flush with the ground, of the same cross-section as the others, and on this is cut a cross marking the center of station. The large stones are about five and one half feet long, imbedded two and one half feet in the ground, and projecting three feet above. They have a cross-section of about eight by twelve inches. The foundation was made very firm by filling in concrete up to the surface of the ground, making the entire mass as solid as a single stone. The portions of these stones above ground are roughly dressed. A full description and drawing of these stones, with measurements to recover the station, in case of removal, will be found in the records of the longitude work between Smith's Ferry and Louisville, Kentucky, July, 1883, at the Coast and Geodetic Survey Office, Washington, D. C. This description would be included here if the stones were of any value in recovering the boundary, but being only useful for the higher astronomical work, it is simply necessary to mention them. They have no inscription cut on them, as no stone cutter was to be found at Smith's Ferry. The following should be cut on them:

U. S. C. & G. Survey, 1883.
Latitude 40° 38′ 46.″3. Longitude 80° 30′ 02.″1.

Mr. Smith very kindly furnished the stones on which the transit rested free of charge. The party was indebted to him for many courtesies during the astronomical work.

To connect the longitude station with the boundary monument, a base of 487.295 meters was measured twice, carefully, with a steel tape, and a small scheme of triangulation projected, the angles of which were measured

with the ten-inch theodolite. This gave the distance to the boundary monument, and, consequently, the longitude of the south-west corner of Pennsylvania. The two nights' exchange of longitude signals gave a very fair result. The office computations of both latitudes and longitude are here given:

Longitude of granite monument on the Ohio and Pennsylvania boundary near Smith's Ferry,	80° 31′ 07″.50
Latitude of same, (observed,)	40° 38′ 27″.25
Longitude south-west corner Pennsylvania,	80° 31′ 08″.20
Latitude of same, (observed,)	39° 43′ 18″.19
Longitude of first monument south of the Ohio, in West Virginia,	80° 31′ 07″.50
Latitude of same,	40° 38′ 00″.35
Longitude of astronomical station at Smith's Ferry, (observed,)	80° 30′ 02″.10
Latitude of same,	40° 38′ 46″.31

Parallel Boundary.

At the meeting of the boundary commission, in Pittsburgh, on July 3, I was authorized to make the latitude observations necessary for tracing out the parallel of latitude between Pennsylvania and West Virginia, beginning at the south-west corner of Pennsylvania, and running eastward to the Maryland corner, a distance of about fifty-five miles; and the executive committee was instructed to undertake the tracing of the line, if sufficient funds should remain on hand to justify it.

The entire distance was divided into four sections by five latitude stations, which were selected near marks on the old line. There was no necessity for locating these stations at equal distances from each other; indeed, that would have been impracticable on account of the scarcity of the old line marks, but four divisions were made, so that the offsets at the end of the tangents might not be of great length, as the country was very rough, and to avoid cutting timber too far away from the boundary. These sections were connected, as far as the survey progressed, by tangents in the prime vertical of the starting-points, from which offsets were made to all the old line marks and other positions located for the new stones.

While engaged in the astronomical observations at Smith's Ferry, I sent an assistant along the parallel boundary, who selected the points and built the instrument stands and platforms for the latitude observations, thus saving much time when the stations came to be occupied. For the determination of latitude, zenith telescope No. 6, U. S. C. and G. S., made by Wurdeman, was used, and observations were made on twenty-three pairs of latitude stars, on three nights as a rule. At no station were there less than fifty observations. Talcott's method, the one now almost exclusively used for refined work with portable instruments, was employed. It is so well known that I deem it unnecessary for me to give a description of it

here. I have only mentioned, casually, the latitude work at Smith's Ferry, because that was an isolated station, while the tracing of the entire south boundary of Pennsylvania depended upon latitude observations, and, therefore, more detailed remarks are appropriate, but all of the observations were made in the same way and with the same instrument, only at Smith's Ferry different latitude stars were used. At all of the stations on the parallel boundary, the same latitude list was observed.

The instruments were shipped from Smith's Ferry to Wheeling on August 15, and a two-horse spring-wagon was engaged to carry everything needed along the line. Next day, with the team, driver, and recorder, the south-west corner was reached, tent erected, and time and latitude observations made. As the corner was of special importance, I observed latitude on four nights, making seventy-three observations. The error of chronometer was determined by observations on from seven to ten time stars each night, either before or after the latitude work was completed, as the clouds permitted. Observations were completed here on the night of the 19th, and next day we drove near Jallytown to Lantz's hill, about fifteen miles east, and put up the tent and instrument, but no observations could be made as it was cloudy. Latitude was observed here on the 21st, 23d, and 24th. On the 25th, we packed up, drove seventeen miles to Mt. Morris, and observed latitude the same night and the two following; that is, on the 25th, 26th, and 27th. On the 28th we packed up as usual, and drove to Harvey, about one mile east of the Cheat river, but, although ready for work at night, rain and clouds prevented us from getting observations till the 31st. Latitude was observed on September 1st, and 3d also, and next day we made a long drive of more than thirty miles across the Laurel hills to the Maryland corner, set up tent and instrument, and observed on the 4th, 5th, and 6th, finishing up the field work.

Thus, from August 16th to September 6th, twenty-two nights, we were fortunate enough to secure sixteen nights work and drive about seventy-five miles. This proportion of clear nights was much greater than was experienced at any other time between the beginning of May and the last of October. On September 7th, we drove to Uniontown along the National pike, where I found a postal from Mr. F. L. Hoge requesting my presence at Canonsburg, Pennsylvania, to confer with Mr. McCullough and himself in regard to undertaking the survey of the line. On my arrival, I discovered that Mr. Hoge had gone to Wheeling, and, after consulting with Mr. McCullough, I joined Mr. Hoge in Wheeling, and we decided that it would be best for both of us to go to Harrisburg and discuss with you the practicability of beginning the ranging out of the parallel boundary. It was decided to undertake the work and carry it on as far as the funds would permit. I, therefore, made arrangements for the party to assemble at the south-west corner on September 26th to begin this work. In the meantime, I was engaged in making the field computations of the latitudes preparatory to sending them to the Coast and Geodetic Survey office for the final reduction.

On September 26, I was at the south-west corner with enough of the party to observe an azimuth, for the purpose of getting the direction of the tangent. This was done in the manner described in the operations on the meridian boundary. Twenty observations were made on Polaris, and the error of chronometer determined by eight time stars. The azimuth station was located 1153.9 feet east of the south-west corner, on a high hill, so as to command a view to the eastward. About one and a half miles west a conspicuous signal was erected in prolongation of the tangent, to serve as a back sight in ranging out the line. For tracing the tangents on the parallel boundary, the party was divided as before, into three sections, and the plan of operations the same. I took charge of the large transit to get the longest sights and interpolate points on the prominent ridges. The smaller instrument was used by Mr. Van Orden, who put in additional points, measured the length of the line, and made offsets to all the old marks that could be recovered.

From the first azimuth station a sight of 1.5 miles was obtained to a prominent wooded hill, (land of Mr. Gump,) that required but little cutting. The next sight, of 3.4 miles to Moffit's hill, was through heavy timber, that had to be cut out of the line of sight. This was followed by a sight of 6.4 miles to Lantz's hill, also through heavy timber that caused considerable delay to the progress of the party. This sight finished the first tangent, the entire distance of 11.6 miles being traversed in three sights. In this section there were three good marks—first, the south-west corner; second, the old post hole on Moffit's hill, that was pointed out by several of the old residents from both sides of the line; third, on Lantz's hill, an old decayed post in the center of a pile of stones. This point is of very great value, all the evidence agreeing as to its antiquity.

The second azimuth was observed here on October 9, twenty-four observations being made on Polaris, and time determined by eleven stars. Next day the tangent was laid off and the opening of the line begun to the eastward. This was a very commanding hill, and from it points were interpolated on the prominent ridges, and the entire length of tangent, over fourteen miles, was traversed in one sight. At this station I laid off a meridian of about one thousand feet in length for Mr. D. N. Gass, who undertook to mark it with stones. This meridian is conveniently situated for the local surveyors. It was my endeavor to interest the surveyors along the line in marking meridians at the azimuth stations with stones, as it was very convenient for me to lay them off, but not exactly a part of my work to mark them with stones, or to make any outlay of money to provide for their preservation.

From Lantz's hill to Brown's hill, a distance of 9.6 miles, there were no trustworthy old marks, but the theoretical curve through the old stake on Lantz's hill passed practically through the center of the mound on Brown's hill, (that is, within $1\frac{1}{3}$ inches of it.) This latter mound was the first mark of the line traced by the Virginia and Pennsylvania commissioners to the

south-west corner of Pennsylvania in 1784, to complete Mason and Dixon's line to the full extent of five degrees of longitude from the Delaware river. Not very far east of this mound terminated the work of Mason and Dixon, at the second crossing of Dunkard creek. No mark could be found to indicate the end of this work, nor is it positive on which side of the creek the line stopped. The old chart, kindly furnished me by Mr. Africa, Secretary of Internal Affairs, Harrisburg, Pennsylvania, shows the west side, and the end of an even five miles, (230.) After passing Brown's hill, going east on the work of Mason and Dixon, the mounds form almost a straight line, bending to the south, until the extreme divergence at the end of the tangent amounts to nearly seventy feet south of the theoretical curve through Lantz's hill.

On October 16, azimuth was determined for the third tangent, or section of the line, by twenty-four observations on Polaris, and error of chronometer on nine time stars. Upon laying off this tangent next day, I discovered that something unusual was the matter, as the back line fell too far south. Supposing that either an error in circle-reading or computation had been committed, I made the computation over again, with the same result. That night an attempt was made to observe azimuth, but the wind prevented me from getting a full set, or securing any time stars; however, enough was done to satisfy me that no error in circle-reading had been made. The next day Mr. Van Orden's party came up, and his offsets to the old mounds showed that the line was bending to the south, beginning at the first mound west of the point where Mason and Dixon stopped their work, about $4\frac{1}{2}$ miles west of the azimuth station.

On the night of October 18, additional azimuth and time observations were made, which confirmed the first night's work. The next day it rained, but on the day following the tangent was laid off, and clearing the line to the eastward continued. The azimuth station was twelve feet north of a fine mound on Bald hill, which commanded an extensive view to the eastward. The first sight obtained was 7.1 miles long, beyond the Monongahela river, but, as usual, points were interpolated on the prominent ridges for the second party before leaving the station. The atmosphere was so clear on this date, (the day being cloudy,) that at the distance of 7.1 miles the range pole was distinctly seen and put in line by flag signals.

The next sight was 1.1 miles long, and the last one 1.8 miles beyond the Cheat river. From this last station, it was only 1289.1 feet to the end of the third section of the line, which terminated at a mound on the land of Mr. Albert Harvey, where the fourth latitude station was located. There was no scarcity of mounds on this part of the line; indeed, from the beginning of Mason and Dixon's line proper, the mounds were found in sufficient numbers to reproduce the line without any trouble. The bend to the south was found quite regular from the first departure from the curve, at 21 miles from the south-west corner, to the first mound west of the Monongahela river, where it turns to the northward, and from there to the

end of the third section, it was nearly parallel to the curve through the south-west corner, and about 174½ feet south of it, and 162.7 feet south of the theoretic curve and accepted boundary through Lantz's hill.

As far as traced, the following description will show the condition of the boundary: From the south-west corner to Lantz's hill, the boundary, as reproduced from the old marks, is not the astronomical parallel derived from the latitude observations, regarding each astronomical position as absolute; nor does it coincide with the theoretical curve passing through the south-west corner of Pennsylvania, but it is a curve that falls 11 feet 9 inches south of this last-named curve at the eastern end, and converges regularly towards it to the south-west corner of Pennsylvania.

A portion of the next section for 9.6 miles, from Lantz's hill to Brown's hill, coincides with the theoretical curve through Lantz's hill, but east of Brown's hill bends nearly in a straight line to the south to the end of the section, where its divergence from the curve through Lantz's hill amounts to 76¼ feet.

For the third section, the line is a continuation of this deviation to the south, with a slight turn to the north, until the first mound west of the Monongahela is reached, where the divergence from the curve through Lantz's hill amounts to 161 feet. East of this point, and to the end of the section, a distance of 4.6 miles, the line bends north and becomes a moderately regular curve nearly parallel to the theoretical curve.

Owing to the development of the bend in the line east of Brown's hill, I deemed it advisable to recommend that only the first part should be marked permanently with stones, and to have the crooked portion only temporarily marked until the rest of the line should be traced to the Maryland corner. In case the line should come back approximately to the theoretical parallel, as the last 4.6 miles surveyed seemed to indicate, it might be advisable to take measures for straightening it. The crooked portion represents about 15 miles of the line, and it was to be preserved by marking the tangents with locust posts. Were it not for the new points interpolated between the old mounds, there would be no necessity for marking even the tangents, as the old mounds themselves would serve the purpose just as well.

The whole length of line surveyed in 1883 was 35.8 miles; of this 21 miles were to be marked permanently with stones, and the rest marked temporarily with locust posts. As on the north and south line, so, too, the commissioners took charge of marking the parallel boundary.

I give here the office computation of the latitude observations on the parallel boundary made in August and September, 1883:

South-west corner Pennsylvania,	39° 43′ 18.″19	± 0″.11
Jallytown, (old line stake on Lantz's hill,)	18.″97	± 0″.12
Mt. Morris, (old stone put in line,)	18.″44	± 0″.13
Harvey, (old mound, very good one,)	18.″14	± 0″.13
Maryland corner, (large stone planted by engineers who ran the west boundary of Maryland, and put this stone in line by the two nearest mounds, I suppose,)	17″.92	± 0″.11
Mean latitude,	39° 43′ 18″.332	

By reference to the mean latitude, or the mean parallel, it will be seen that the south-west corner is 14 feet south, Jallytown or Lantz's hill 64.7 feet north, Mt. Morris 11 feet north, Harvey 19 feet south, and Maryland corner 41 feet south.

The following charts and records, in duplicate, accompany the report:

MERIDIAN BOUNDARY, scale $\frac{1}{80000}$, showing how the survey was made and the condition of the old line. Also, the meridian as traced with the transit and the corrected line as marked with stones.

MERIDIAN BOUNDARY, scale $\frac{1}{40000}$, showing the accepted line as marked, and also the meridian stones. This is the complete map.

PARALLEL BOUNDARY, scale $\frac{1}{40000}$, showing how the survey was made, the condition of the old line, the part corrected for 21 miles, and the uncorrected part for nearly 15 miles. The final map cannot be made until the survey is completed to the Maryland corner.

RECORDS giving description of the pegs set for the monuments, and hence the positions of the monuments, for both meridian and parallel boundaries.

In closing my report, I take advantage of the opportunity to express my thanks to the members of the executive committee for their hearty coöperation with me during the survey. Either Mr. McCullough or Mr. Hoge, and for most of the time both of them, were with me while tracing the meridian line, and Mr. McCullough while running the parallel boundary. To my colleague from the Coast and Geodetic Survey, I am greatly indebted for his zeal and efficiency in relieving me of much of the responsibility incident to such work, his wide experience adapting him especially for that part of the survey placed under his charge. The harmony among the members of the party, and their readiness to undertake their duties, were very gratifying to me. From the people along the line we experienced the kindest treatment. Upon their hospitality we were dependent for food and quarters, and we found them more than willing to inconvenience themselves for our comfort.

It was a source of great regret to me that the funds were too low for us to complete the parallel boundary when within two weeks or less of the end of the work. It could have been finished with far greater economy at that time, with the party in the field, fully organized and well trained, than at any subsequent period.

Yours, respectfully,

C. H. SINCLAIR,

Coast and Geodetic Survey.

CATSKILL, NEW YORK, *February 9, 1884.*

Mr. C. H. SINCLAIR, *Assistant Coast and Geodetic Survey:*

DEAR SIR: I herein furnish for your consideration the following report of the work you assigned me in the survey of the meridian line between

Pennsylvania and West Virginia and that part of the south line of Pennsylvania which borders on West Virginia.

My instructions to report to you for duty were dated April 25, 1883, and, in compliance with your letter in reply to mine reporting for duty, I proceeded to Smith's Ferry, Pennsylvania, arriving there on the 2d of May. After the azimuth had been measured, by your directions, I took charge of the intermediate line. This work consisted in running from point to point (established by you) in main line, looking up marks of old boundary, getting all information possible relating to them, and selecting and marking places for new monuments. At first it was determined to mark each mile and every public road. I soon discovered that many of the mile-marks fell in unsuitable places, such as bottoms and hill-sides, and that much valuable time was lost in cutting brush and running down into such places, and also that many of the stones would be of little value to surveyors, not being in sight of each other. You then decided to go from hill to hill, marking those most suitable for the purposes of the survey—a well-defined State line marked in such manner that the line from stone to stone could be easily traced. It was also discovered that marking all roads from above causes was a work of great labor, as well as often placing the stones very close together, so it was decided to mark only railroads, pikes, and important county roads.

The plan of work was to measure the line with chain and stadia rods, giving the distance from initial monument (on south side of the Ohio) to each old monument or mark, and to the places selected for the new monuments. The instruments used were a 6-inch Coast and Geodetic Survey (Brunner) repeating theodolite, a Gunter's chain and stadia rod, graduated to read 1,400 feet. The theodolite was furnished with a glass diaphragm, on which stadia lines were cut, and a vertical arc, to determine the depressions or elevations to correct for inclinations. For convenience in making the corrections, a small table was constructed to 10° and 1,200 feet; for a greater inclination or greater distance it was computed in the field.

Before going a mile, I discovered that it was impossible to do accurate chaining in such a broken country where the hills were so steep it was often with difficulty they could be climbed; and frequently they reached the height of several hundred feet. The views were generally so broken by dense timber in the bottoms and along the runs that it was impracticable to use the rod without expensive cutting. I found from hill top to hill top that the view was generally unobstructed, and I determined to measure the distances by small triangulation, with rod or chain bases, each triangle to have its own measured base. When practicable check-bases were measured and their accord was always satisfactory. The chain was almost abandoned for the rod, the latter being so much more convenient, and, I think, over such hilly country, more accurate, at least the errors in reading the length of the bases would tend to balance each other; whereas in the chain the errors

of inclination are always accumulative—a far greater error than that of marking with pins.

It was frequently necessary to make offsets to avoid cutting lines of sight, as often the lines would pass for a long distance through woods, when a few feet would clear the obstruction—a feature peculiar to State lines. Right-angle offsets were avoided as much as possible; a kind of offset, I think, very difficult to make successfully, owing to the necessarily short back and long foresights. Instead of using a right-angle offset, a distant object, like a house-chimney or house-corner, was generally selected nearly opposite to the required direction; the angle it made with the back-sight was measured, the line was then backed up in prolongation of your position and distant object for the distance of required offset, the angle just measured taken from 180°, laid off with distant object, when you have a line parallel to the main line, and with a back-sight much longer than foresight. In setting back into main line, lay off measured angle, when you again have a back longer than foresight. The kind of offset I generally used and preferred, was to make it before reaching the place (the greater the distance the better) by sending a rod to the place selected, determine the distance (it is from you), and compute the offset; measure the angle it makes with your back-sight; then occupy the offset and lay off the same angle on opposite side of line with last point occupied, and you again have a line parallel to main line. In setting back into main line, do it with a right-angle and tape. When obstruction was not great, the rod was carried to such a distance that it was possible to set at once back into line. The angle here used in laying off is taken from 270°. In all the above methods, I traversed toward the foresight (your signal) after getting back into main line. The computed offsets gave better results than the measured, and were always used when practicable. I have given this space to the discussion of the offset because of the difficulty attending its successful use.

In running this line, twenty-four old meridian stones were found, and but few other marks, except the general line of fencing, of any value. In the twenty-four stones, I have included all that were said to be meridian stones; the probable value will be discussed as each is described. The stones were generally about 2 feet × 1 foot × 4 inches, roughly dressed, and marked with large distinct letters.

The first old stone, found on the land of Mr. Marshall, was about 400 feet south of the Ohio river, and 8 inches west of meridian; the stone was erect, firmly planted, and said to be in its original position. It had the appearance of great age, and was marked P on the Pennsylvania side, and V on the Virginia side. This stone was assumed as the initial of the survey, and all following distances are the distances from it.

The second old stone, on the west side of Bucher brothers' farm, 1 mile 1587.9 feet, and 11 feet 6¼ inches west of meridian, was in a deep hollow on branch of Little Mill creek. It was said to be an old meridian stone, of no decided shape, small, buried deep and unmarked. Forty years ago, in a

neighborhood quarrel, it was said to have been moved. I think it was not an original stone.

The third old stone, on the first ridge north of Robert Moody's, 2 miles 2873 feet, and $13\frac{1}{4}$ inches west of meridian, on cleared ridge, and evidently in old position. It is leaning east, is marked P on east and V on west side; it stands in fence line.

The fourth old stone, between the lands of Mrs. Pugh and F. Ramsey, 3 miles 649 feet, and $2\frac{1}{2}$ inches east of meridian, is on a high cultivated knoll, in fence line. An old resident told me it was standing where it had stood for forty-three years, and that it is marked P & V, but too deep in the ground to see the marking, from which I infer it has at some time been reset, though it has the appearance of having been in its present position for many years. It is leaning east.

The fifth old stone, between the lands of Mr. Thompson and Mr. Cooper, 4 miles 105.6 feet, and 3 feet $1\frac{1}{4}$ inches west of meridian, is on a high wooded ridge. It is loose, and said to have been moved. It has the appearance of not being in old position. Is marked P on east side, and V on the west side; is nearly in fence line.

The sixth old stone, between the land of Mr. Richmond and Mr. Nickles, 4 miles 4919.1 feet, and 3 feet 7 inches west of meridian. Very little information was obtained of this stone. It is in fence line.

The next mark, just north of Mr. Patterson's house, is a farm corner, supposed by old residents to be in State line, was 5 miles 1645.8 feet, and 28 feet 8 inches west of meridian.

The next mark was a farm corner, north-east corner of the Latham property, 5 miles 5241 feet, and 1 foot $4\frac{1}{2}$ inches west of meridian, in line fence, supposed to be in State line.

The seventh old stone, between the lands of Mr. Ramsey and Mr. Scott, 7 miles 23.6 feet, and 5 feet 1 inch west of meridian, on high wooded ridge; had been moved, but supposed to be put back in old position.

The eighth old stone, on land of Mr. Carson, 8 miles 69.7 feet, and 9 feet $9\frac{3}{4}$ inches west of meridian, on north side of public road, on high hill. Is said to have been moved in making road; is broken and unmarked, though supposed to be an original meridian stone.

The ninth old stone, between the land of Mr. Herring and Mr. Allison, 8 miles 4091.8 feet, and 8 feet $5\frac{1}{2}$ inches west of meridian, is at the place where Judge Reddick, an eccentric character, was buried fifty years ago. It is said to have been his wish to be buried there, and that his head was placed on the line, the place being found by center of vista, which was then plainly seen. The head of the tomb is 2 feet $5\frac{1}{2}$ inches east of meridian. There is a diversity of opinion as to the value of this stone. The one I considered the best was from an old gentleman, who said, as long as he could remember, fifty years, the stone had stood where it now stands; another, that it once stood closer to the tomb; and another, at the time of Judge Reddick's burial, no stone existed. This last opinion, I think, is

clearly in error, for it is evidently an original stone, as it is marked P & V like the rest, and has "55" marked on it, indicating, I think, 55 miles from south-west corner of Pennsylvania. I make it 54 miles 4540.4 feet, 739.6 less than 55 miles, a sufficiently close agreement if the old line was chained.

The tenth old stone, between the land of Mr. Chambers and Mr. Cameron, 9 miles 4575.7 feet, and 9 feet $9\frac{3}{4}$ inches west of meridian, is in line fence on cultivated hill. It is broken and nearly out of the ground. It is evidently an old meridian stone, but of little value, as an old resident says it has been reset, and has the appearance of not having been very long in its present position.

The next mark is the corner-stone of Washington and Beaver counties, Pennsylvania, 10 miles 3967.8 feet, and $7\frac{1}{4}$ inches east of meridian. It is in the woods; it is marked W. & B., is small and buried deep in the ground. I believe it was put in position a few years ago under the direction of a commission, and its position in the State line determined from the first two stones south. Near this, 141 feet 10 inches north, and 37 feet 10 inches west of meridian, is a tree known as "Girdled Tree," and said to have been in original vista, and in line of the county lines. This is possible, as the stone is near the bottom where the tree was belted instead of cut down as on hill tops.

The eleventh old stone, on west line of the Cross farm, 11 miles 422 feet, and 11 feet west of meridian, is on a cultivated ridge. It is broken, leaning south-east and appears to have been disturbed, but the general opinion is that it is in its original place.

The twelfth old stone, between the land of Mr. Cross and Mr. Freshnater, (?) 11 miles 4189.2 feet, and 12 feet $8\frac{1}{2}$ inches west of meridian, is on top of a cultivated hill. There is nothing remarkable in the appearance of this stone, and I could get no opinions from the people. A short distance north of this point, the opinion began that the line was too far west and nearer to our line; this opinion was found on the West Virginia side.

At about 12 miles 3600 feet, on land of Reuben Freshnater, an old monument is said to have stood, but no trace of it could be found.

The next mark is a farm corner-stone, south-west corner of John Hearne's farm, 14 miles 1350 feet, and 4 feet $10\frac{3}{4}$ inches east of meridian, supposed to be on State line. I think it of little value.

The thirteenth old stone, 15 miles 4289.6 feet, and 16 feet west of meridian, is on Pittsburgh and Steubenville pike, of small value, as it has been moved several times while working the pike. The opinion seems to be growing on the West Virginia side that the old line is too far west, and once was near our line. An old gentleman says that a church once stood in first field south of this point with the rear wall on the line, and that was about on our line; the foundation has been gone forty years, and, therefore, I think its position uncertain.

The next mark, corner-stone of Brooke and Hancock counties, is 16

miles 989 feet and 18 feet 3¾ inches west of meridian; is a standstone dressed square and stands 4½ feet out of ground, and supposed to be in line; was located a few years ago from the first old stone south of here. I am informed that Mr. Samuel Gardner, on whose land it is, intends moving it into accepted line, a distance of 4 feet 5½ inches.

The fourteenth old stone, 17 miles 1027.5 feet and 18 feet 7 inches west of meridian, is in Chriss' field at edge of timber on flat-topped hill. Stone is deep set and has the appearance of having stood where it now stands for many years. When the present owner bought this land, the stone was then, fifteen years ago, discovered 16 feet west of the line they were then running for the State line. I could not hear that it had ever been moved, and I think it a valuable mark.

The fifteenth old stone, between the lands of Widow Gardner and Hindman, 19 miles 951.9 feet and 18 feet west of meridian, is on high cultivated hill south of the Pan Handle railroad; is deep set and has the appearance of great age. The general opinion seems to be that it is in its original place.

The sixteenth old stone, on the land of James Amspoker at east line of Mr. Steen, 21 miles 438.3 feet and 20 feet 11 inches west of meridian, is on cultivated hill, is broken and loose. An old resident says it stands where it has for fifty or sixty years, but its position does not indicate great age. The lower half, on which the top was supposed to be placed, could not be found. Many years ago, so Mr. Steen has been told, over this stone stood a post with two large staples in it.

The seventeenth old stone, between the lands of John Buckey and William Cammon, 24 miles 4017 feet and 23 feet 8¼ inches west of meridian, on high cultivated ridge south of Cross creek. It is broken and the part now standing is unmarked. It has been reset once or twice and supposed to have been put back in old position. An old resident on the West Virginia side thinks the line was onee about 1 rod east of this point.

The eighteenth old stone, on the land of David Buchanan, 26 miles 2887.5 feet and 25 feet west of meridian, is on a small hill about three fourths of mile south-west of Independence; it is loose and high out of ground. Except the initial, it is the largest of the stones. It is plainly marked P & V like the rest and has "37" on the Pennsylvania side; was reset a few years ago and supposed to be put back in its original position. An old lady, with remarkable memory and clear mind, who has lived within a few hundred feet of it for seventy-three years, says it stands where it has for that time, and remembers, distinctly, standing at the stone and looking south through the middle of the vista, when the latter was plain, "as far as the eye could reach." Both sides of the line have been owned by the same person for over seventy years. The very common idea that the line is too far in West Virginia seems to be dying out. About one mile below this point, the old vista is well marked, and the distance of its center west of the meridian would carry out the idea that the stone was in its true position.

The next mark is the corner-stone between Brooke and Ohio counties, West Virginia, on land of James Dickey, 32 miles 2400 feet and 21 feet $4\frac{1}{4}$ inches west of meridian, is a dressed stone about $3\frac{1}{2}$ feet out of ground and is marked "B" & "O," and on west side near bottom is "Co. Line." It was placed by Surveyor Wood in 1845 or 1846.

The nineteenth old stone, about three miles north-west of West Alexander, on land of Mr. McCammon, 33 miles 3027.9 feet, and 28 feet 7 inches west of meridian, is on a high cultivated knoll, and, from all opinions obtained, is the most reliable one in the line thus far, though too erect and deep buried to give evidence of great age in its position. The land on both sides is now, and has been, owned for fifty or more years by the same person.

The twentieth old stone, 37 miles 954.8 feet, and 29 feet $11\frac{1}{2}$ inches west of meridian on high hill, about one mile south-west of West Alexander, on land of John Tannerhill, known as Slaighter's hill, is said to be in original position, but has not the appearance of great age, and evidently has been out of the ground at some time, for the "V" is on the Pennsylvania side and "P" on the West Virginia side; it has "26" marked on it.

The twenty-first old stone, about one mile north of Haneytown, on the land of Mr. Southerland, 41 miles 4187.7 feet, and 31 feet $9\frac{1}{2}$ inches west of meridian, is apparently of great value. An old resident says that for fifty years it has been undisturbed.

The twenty-second old stone, on Mr. Toland's land, east end of Haneytown, 42 miles 3897.5 feet, and 27 feet 8 inches west of meridian, is of no value whatever. At one time it was used as a foundation stone for a barn, and is now lying under the corner of a fence. At or about this place the counties of Ohio and Marshall, of West Virginia, corner, but the place could not be definitely found.

County corners between Washington and Greene counties, Pennsylvania, fall in the bed of Big Wheeling creek, at Majorsville, about 46 miles 3100 feet. The exact place not known and probably never marked.

The twenty-third old stone, on land of Mr. Dorsey, 48 miles 5154.3 feet, and 32 feet 8 inches west of meridian, on high hill south of Big Wheeling creek, is plainly marked and loose. It is in fence line; could hear nothing definite about it.

The twenty-fourth old stone, about one and three quarter miles north-east of Rock Lick, on land of Mr. Ferrell, 51 miles 2073.9 feet, and 36 feet 7 inches west of meridian, is said to be, and apparently is, in old position. It has "XII" cut on Pennsylvania side. At this point the old line takes a slight bend to the west. This is the last stone found on the line, and from here to the corner, a distance of about twelve miles, not an object of any value was found; the fences were generally west of meridian, but swaying a great deal.

The corner, 63 miles 3352.2 feet, and 54 feet $5\frac{1}{2}$ inches west of meridian, is a post in a heap of stones, consisting of about two cart loads. The post

was not a very old one, but evidently in place where old one stood. The pile of stones has the appearance of great age, as they are more or less covered with earth and vegetable growth, and is not a freak of nature, but was put there. It is said that sixty-six feet south of here another corner once existed; but after subsequent and careful examination I was convinced that no such corner ever existed, as not the slightest trace of it could be found. This pile of stones has been accepted by all I saw as the true corner.

I finished running this on the morning of June 30, and proceeded at once to Wheeling to await the result of the meeting of the commission. As soon as notified by you that a line drawn from the south-west corner of Pennsylvania to the initial stone was decided upon, I computed the offsets from the meridian to such a line, and went over it and drove pegs at their proper distances west of the pegs at the places already selected for new monuments, in all fifty-two. As fast as possible, proper descriptions and sketches of these points were made and sent to Mr. John Chipley, commissioner in charge of setting the new monuments; after which I returned home and made two maps of the work on $\frac{1}{8000}$ scale.

For minute descriptions of the old stones and description of the places selected for new monuments, see volume of "Descriptions of Stations," accompanying this report.

After the completion of the field-work of the parallel, (south line of Pennsylvania,) I was directed by you to make an examination of the marking of the meridian. In doing so, I incidentally examined the positions of a few of the line stones, and found them somewhat out of line, particularly one near West Alexander, which was 3 feet 5 inches west; the others were slightly out. Mr. Chipley explains the above one by saying it was set in his absence, and that the others were placed as he thought sufficiently close to the places selected, and for all practical purposes I found them so, with the exception of one I will hereafter speak of. It was then decided that the whole line should be examined, which I did in November, from the 26th to December 1. I found but one stone—the second north of corner—I thought necessary to move, it being 23 inches east of line. The stones I had previously examined had been moved into line by Mr. F. L. Hoge, Commissioner of West Virginia, who also said he would move the above one. I gave him a memorandum of it.

The accompanying table shows the position of all the stones, old and new, in the line as now standing and with their proper offsets. Since my arrival home, after a long and careful revision of the length of the line, I found a clerical error of about 1200 feet, which slightly changes the length of the offsets; the greatest change being less than 0.2 feet. The corrections due to this change in length are shown in the table.

Meridian.

Object.	Corrected distances from initial monument.		Old marks E. or W. of meridian, in feet.		Offsets from meridian for stones as set in new lines.	As stones were set E. or W. of line on first offsets, in feet.		Offsets corrected for new length of meridian.	Position of stones E. or W. of true line, in feet.		Distances out on stones, counting from S. W. corner, as now set.	Distances corrected for true length of meridian.

NOTE.—The twenty-third new monument was assumed to have been placed in right position. It was impossible to revise it without running part of the line, as the reference peg had been moved after stone was set.

The above table gives the distance of each old monument and each new monument, from initial, in miles and feet; from south-west corner, in miles and tenths of the new monuments, and the distances of both old and new from the meridian and accepted line.

Parallel Boundary.

In compliance with your letter, I reached Board Tree on September 26, to assist you in the survey of the parallel on south line of Pennsylvania, along the West Virginia boundary. After some delay in organizing the party, I again, by your directions, took charge of the intermediate line. The same instruments were used on this as on the meridian, and the character of the country was found to be similar. As soon as you had measured an azimuth and laid off a tangent, I followed from point to point, looking for old marks, and selecting places for new monuments, as on the meridian. Until Mason and Dixon's line, a distance of about $21\frac{3}{4}$ miles, was reached, but few old marks were found, and some of these so indefinite as to be nearly valueless. In reconnaissance I was often at a loss to find the line, as it was generally unfenced.

After leaving the corner, the first mark found was an old post hole, on a high wooded ridge, known as Moffit's Hill, at a distance of 5 miles 879.9 feet, and 5 feet 10 inches north of tangent, supposed, from best authorities consulted, to be where original post stood. See accompanying table for its and the following points' distances from true and accepted curves. This tangent passed 51 inches north of corner stone. In this and following tangents, where distances from tangent to old mark are mentioned, they refer to the tangent as run and not corrected for constant offset.

The next mark or marks were in dense timber on the land of Widow Woodruff, at a distance of 8 miles 2612.9 feet, and consisted of two old post holes 9 feet and $\frac{1}{2}$ inch apart, and lying north and south of each other. After a fruitless search, I sent for an old gentleman to show me the place. He pointed out the more southern one as the place where original post stood, which was 16 feet $5\frac{1}{2}$ inches north of tangent. While occupying this point, two old gentlemen (brothers) from the other side of the line came by and said the other post hole was the one supposed to be the original one. Both authorities seemed equally familiar with the country, respectable and intelligent. Just here for many years a bitter quarrel existed as to the line. As the adjusted line passed a little north of the more northerly one, I incline to it as the original one.

The next mark was a mound—the first mound—on the land of Thomas White, about two miles south-west of Jallytown, at a distance of 9 miles 4759.5 feet, and 13 feet 3 inches north of tangent. It is supposed to be an old line-mark, but in my opinion worthless, for in laying off offset to accepted line the point nearly fell in what had a greater resemblance to an old mound, though I consider both of small value. I think both here and at the preceding place two lines may have been marked, and the more southern one rejected.

The next mark was a post hole in a pile of stones, on high wooded ridge, known as Lantz's hill, at a distance of 11 miles 2959.9 feet, and 58 feet 6 inches north of tangent. This was supposed to be the original hole, and accepted by all as such. From all opinions obtained, it is of great value.

It is 11 feet 9 inches south of theoretic curve, passing through corner stone. In connecting this tangent, a curve was constructed through this mark and the corner, converging regularly with the theoretic curve.

At this point you measured a new azimuth and laid off a new tangent, passing 6 feet north of the old post-hole, and beginning 89.2 feet west of it. For 9 miles 3178.4 feet there was not a single mark of any value. At this point, on a high cleared knoll, known as Brown's hill, the first well-defined mound was found 45 feet 2 inches north of tangent. It is clearly an old mound, and from best authorities I could find has always been accepted as such. The theoretic curve passing through the post-hole on Lantz's hill passes within $1\frac{1}{3}$ inches of what we assumed to be the center of this mound. This is the first mound west of the "second crossing of Dunkard." From here east the line makes a decided bend to the south, so great that you decided to mark only that part of the line west of this point. From here back to Lantz's hill no adjustment was necessary, and the theoretic curve was adopted.

About 2,000 feet east is "second crossing of Dunkard," where Mason and Dixon turned back. From here on the mounds were found nearly every mile, and were generally well-defined. They usually consisted of a mound of earth and stones, about 6 feet in diameter and a few inches high. Probably each one had a post in it, as their traces were occasionally found.

The next mark was an old mound on Inghrim's hill, about two miles west of Mt. Morris, at a distance of 11 miles 4483.9 feet, and 38 feet 8 inches north of tangent.

The next mark was an old mound on Evan's hill, south of Mt. Morris, at a distance of 12 miles 4660.9 feet, and 32 feet 6 inches north of tangent.

The next mark is an old mound on Bald hill, south-east of Mt. Morris, at a distance of 14 miles 167.9 feet, and 32 feet 7 inches north of tangent. At this point you measured a new azimuth and laid off a new tangent, passing 12 feet north of old mound. So far from Brown's hill there has been an almost regular divergence of the old line to the south, instead of curving north as it should.

The next mark was an old mound on Balby's hill, at a distance of 1 mile 385.8 feet, and 28 feet south of tangent, a divergence of over 16 feet in the wrong direction. This mound is very plain, and the old post hole is still to be found.

The next mark was an old mound on Hall's hill, at a distance of 2 miles 1480 feet, and 43 feet $8\frac{1}{2}$ inches south of tangent. This mound is clearly an old one.

The next is an old mound on Garlow's hill, at a distance of 3 miles 4669.9 feet, and 62 feet $3\frac{1}{2}$ inches south of tangent. It is not very well defined, and I think of little value, though it is evidently accepted by the neighborhood, and was pointed out to me by an old gentleman.

The next is a mound on Keener's hill, at a distance of 5 miles 3225.6 feet, and 86 feet 1 inch south of tangent, and about 161.2 feet south of ac-

cepted parallel passing through Lantz's hill. It is very faint and of doubtful value; it is the last before crossing the Monongahela river. At this point the old line bends in the direction of a curve parallel to the true curve.

The next is a mound on Ross' hill, at a distance of 8 miles 769.6 feet, 72 feet 11 inches south of tangent, and about 166.9 feet south of accepted parallel passing through Lantz's hill. This is the greatest distance the old line is south of true curve. This is the first mound (to which measurements were taken) east of the Monongahela river. I was told there was one about one third of a mile west of this point, nearly in the bottom and in timber; it was searched for, though not much time was given to it; it probably was not an original one, being so close to this one. The old line here is nearly following a parallel.

The next is an old mound about one mile east of Cheat river, on land of Albert Harvey, and distant 10 miles 1104.8 feet, and 45 feet south of tangent, and about 160.3 feet south of accepted parallel passing through Lantz's hill. To this and the last two add 11.75 feet, and you have the theoretic curve passing through the south-west corner of Pennsylvania. You will notice, for the last three points you have a nearly perfect parallel with a mean distance of about 162.8 feet south of the accepted parallel passing through Lantz's hill, and about 174.6 feet south of the theoretic curve passing through the corner stone.

At this point the season's work closed. I finished my field work on October 24. For minute descriptions of old marks, see accompanying volume of "Descriptions of Stations." The accompanying table will give an idea of the relative positions of old and new points. The whole length of line surveyed, as measured by straight tangent, is 35 miles 4143.4 feet. After computing the offsets to the curve, I returned over the line, driving pegs at the places selected for new monuments west of Brown's hill, finishing October 27, when I returned to Wheeling, and there made the examination of the meridian stones referred to before.

Descriptions of the places to be marked with monuments were furnished Mr. James McCullough, Commissioner of Pennnsylvania, who had charge of setting them. I subsequently furnished Mr. F. L. Hoge, Commissioner of West Virginia, with like descriptions for the same purpose. Owing to severe illness, Mr. McCullough had been unable to take the field, and Mr. Hoge told me he would place the stones.

Respectfully yours,

(Signed) C. H. VAN ORDEN,

Coast and Geodetic Survey.

Third tangent passes 12 feet north of old mound on Bald hill.
Old mound (Bald hill) is south of theoretic curve passing through old post-hole, (Lantz's hill,) . . . . . 69.7 feet.
Old post-hole (Lantz's hill) is south of theoretic curve passing through south-west corner, ... 11.8 feet.

Third tangent, corrected for offset, begins south of theoretic curve passing through south-west corner, ... 81.5 feet.

Brief Description of the Complete Map of the Meridian Boundary, 1883, Scale $\frac{1}{40000}$.

This map is the final or complete chart of the meridian boundary, as marked in 1883 by new stone monuments.

The initial for distance is the south-west corner of Pennsylvania, the original line having started from that point. The Executive Committee, while in the field, adopted this point as the initial.

The line is a true meridian from the first stone south of the Ohio, northward to the Ohio line. From this first stone south of the Ohio to the south-west corner of Pennsylvania, the boundary is a straight line. It makes an angle with the meridian of 33.″4, at the first stone south of the Ohio, or diverges to the west at the rate of $10\frac{1}{4}$ inches per mile, making an extreme divergence at the south-west corner of 54 feet $5\frac{1}{2}$ inches; that is, the south-west corner of Pennsylvania is 54 feet $5\frac{1}{2}$ inches west of the meridian of the granite monument marking the south end of the Ohio and Pennsylvania boundary.

The distances between the stones are marked on the chart, and the meridian stones are shown in red circles. The land-owners' names are put on the chart where the monuments are planted. The numbers 1, 2, 3, &c., on the west of the line, are made to correspond with the numbers in the volume of "Description of Monuments."

All of the stones were set by the commission, and not by the engineers. The position of each stone was revised by Mr. C. H. Van Orden, and most of them were found a little out of line, as shown in the tables. Eight of them, underscored in red, are considerably out.

C. H. SINCLAIR.

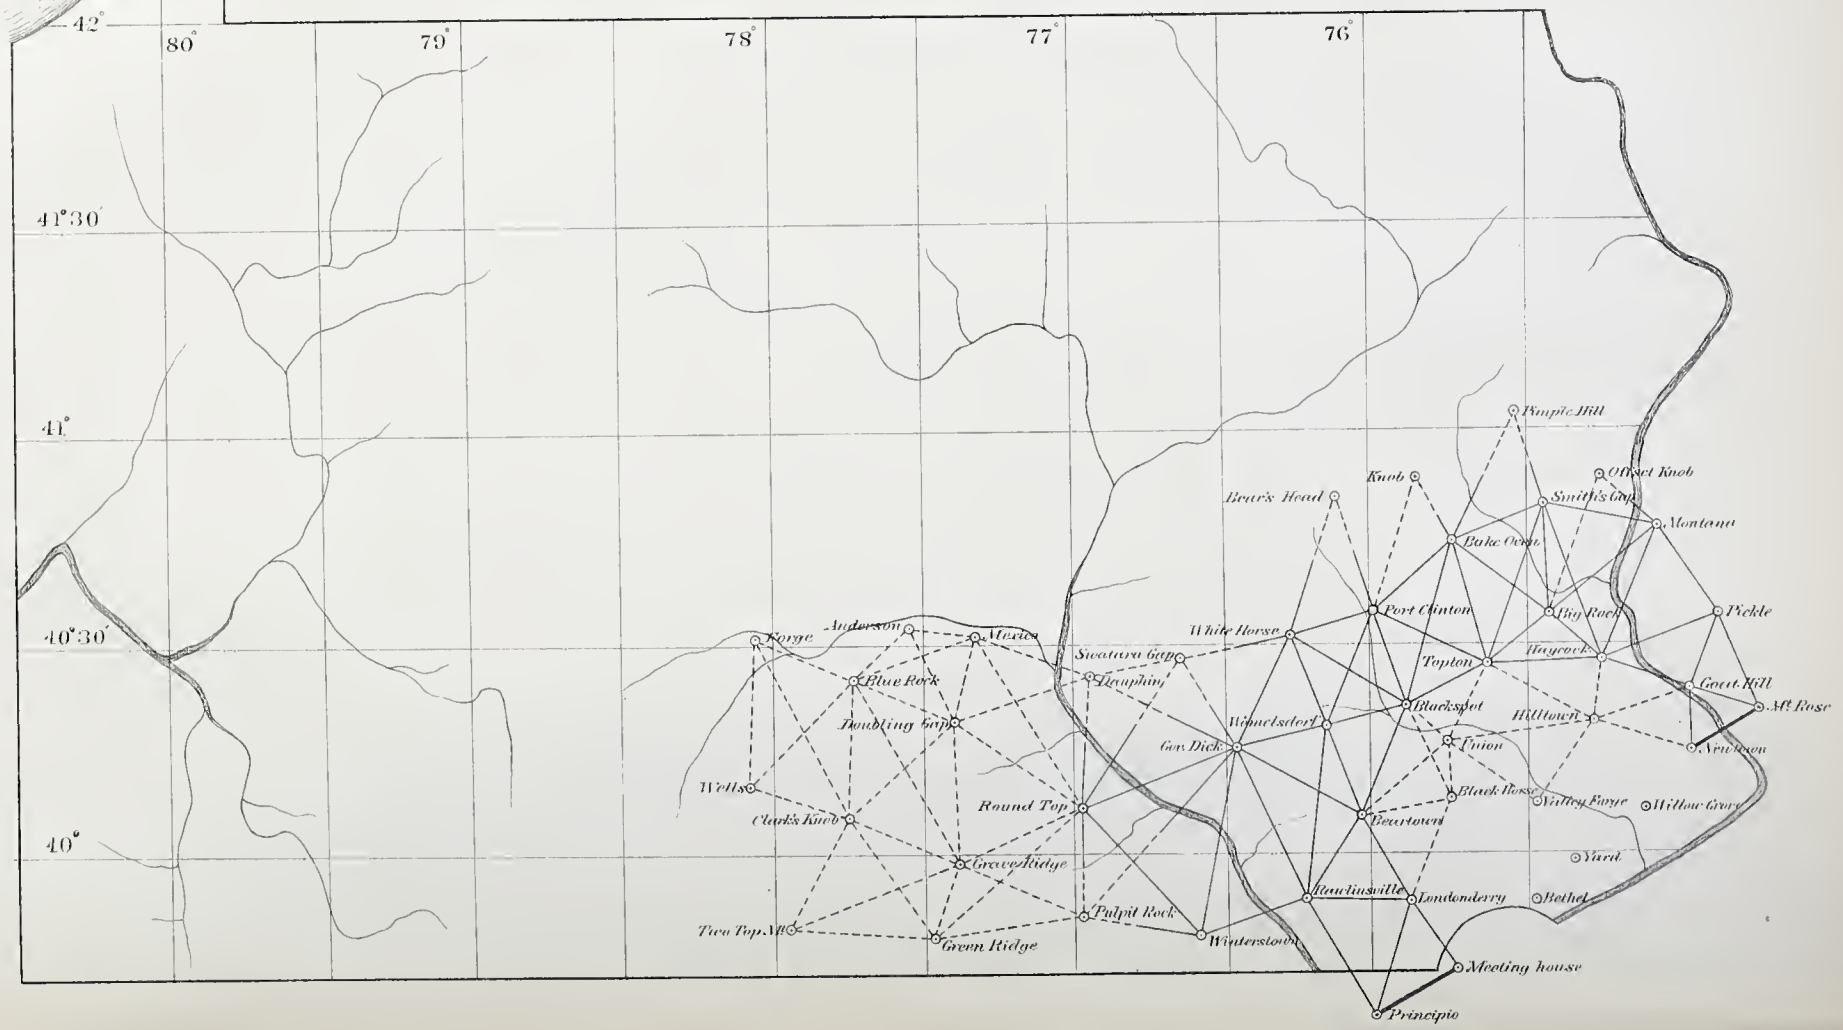
TRIANGULATION AND RECONNAISSANCE
IN
PENNSYLVANIA,

by U.S. Coast & Geodetic Survey. *January, 1884.*



THE GEODETIC TRIANGULATION IN PENNSYLVANIA.

By permission of the Superintendent of the U. S. Coast and Geodetic Survey, the following account has been prepared by Prof. Mansfield Merriman, of Bethlehem, Acting Assistant in present charge of the triangulation.

During the past nine years, the United States Coast and Geodetic Survey, under the authority of Congressional enactment, has carried on in Pennsylvania the operations of a geodetic triangulation. As the field-work has been limited to two or three months in each year, the progress has not been rapid, yet it is believed that sufficient results have now been attained to render a statement concerning them of interest and value.

On the accompanying outline sketch of Pennsylvania, are marked the stations and triangles as they exist at the present time. The stations are indicated by a point inclosed within a small circle, and to each is attached its name. The lines inclosing an angle are drawn full when that angle has been measured, and broken when it is yet unmeasured. It will be seen that within the limits of the State there are now forty stations.

The seven stations, Principio, Meeting-house, Bethel, Yard, Willow Grove, Newtown, and Mt. Rose, belong to a chain of primary triangles (not shown on the sketch) which connects the measured base on Long Island with that on the Chesapeake Bay. From these measured bases, the horizontal angles, and astronomical observations, the positions of these seven stations were many years ago accurately determined. The latitude and longitude of each is known, as also the azimuth and distance from each to the next. On the sketch is drawn a heavy line connecting the two stations Principio and Meeting-house, and also one joining Newtown and Mt. Rose. It is from these two fixed primary lines that all the Pennsylvania triangulation has been computed.

The field work of the survey was in charge of Prof. Lewis M. Haupt from its inception in 1875 to the close of the season of 1880. During that period, he laid out the triangulation as represented in the sketch and measured the angles at thirteen stations. An interesting account of the methods of reconnoissance and triangulation is given by Prof. Haupt in the Proceedings of the Engineers' Club of Philadelphia, Vol. I, page 215.

It will be noticed that the main chain of triangles, starting from the line Principio–Meeting-house as a base, curves around in a horse-shoe shape to the other base, Newtown-Mt. Rose. The angle measurements on this chain having been completed in 1882, it was adjusted by the computing division

of the Coast and Geodetic Survey office, and the geographical positions of the stations determined.

Below is given a brief statement of the location of the thirteen stations of this chain situated in Pennsylvania. They are usually marked by stone monuments or by bolts in the rock, and are well known by the people of the vicinity. For each station is given its latitude, its longitude west of Greenwich, the azimuths or directions to the neighboring stations, and the distances in meters. The azimuths are reckoned from 0° around to 360°, south being 0°, west 90°, north 180°, and east 270°.

Rawlinsville Station.—This is situated near the village of Rawlinsville, in the eastern part of Martic township, Lancaster county:

Latitude, 39° 53′ 09″.539. Longitude, 76° 15′ 58″.372.

To Gov. Dick;	azimuth,	158° 02′ 34″.80;	distance,	43157.9	meters.
To Womelsdorf;	"	187° 00′ 42.″54;	"	49061.4	"
To Beartown;	"	221° 49′ 08.″81;	"	30584.1	"
To Londonderry;	"	274° 06′ 10.″43;	"	33073.2	"

Londonderry Station.—This is situated in the township of the same name in Chester county:

Latitude, 39° 51 50″.507. Longitude, 75° 52′ 50″.442.

To Rawlinsville;	azimuth,	94° 21′ 00″.25;	distance,	33073.2	meters.
To Beartown;	"	154° 50′ 11″.19;	"	26637.8	"

Beartown Station.—This is situated in Salisbury township, Lancaster county, about two miles east of Greenbank post-office:

Latitude, 40° 04′ 51″.947. Longitude, 76° 00′ 48″.491.

To Rawlinsville;	azimuth,	44° 58′ 53.″47;	distance,	30584.1	meters.
To Gov. Dick;	"	116° 05′ 56″.04;	"	41916.6	"
To Womelsdorf;	"	150° 11′ 39″.68;	"	31167.0	"
To Blackspot;	"	197° 38′ 12″.88,	"	31050.6	"
To Londonderry;	"	334° 45′ 04″.08;	"	26637.8	"

Governor Dick Station.—Situated in the southern part of Cornwall township, Lebanon county:

Latitude, 40° 14′ 46″.773. Longitude, 76° 27′ 21″.114.

To White Horse;	azimuth,	204° 49′ 25.″64;	distance,	32925.3	meters.
To Womelsdorf;	"	248° 29′ 12.″30;	"	23763.1	"
To Beartown;	"	295° 48′ 48.″83;	"	41916.6	"
To Rawlinsville;	"	337° 55′ 15.″34;	"	43157.9	"

Womelsdorf Station.—Situated in Heidelberg township, Lebanon county, about three miles south of the village of Newmanstown:

Latitude, 40° 19′ 28.″250. Longitude, 76° 11′ 44″.689.

To Rawlinsville;	azimuth,	7° 03′ 25.″96;	distance,	49061.4	meters.
To Gov. Dick;	"	68° 39′ 17.″79;	"	23763.1	"
To White Horse;	"	158° 47′ 42.″56;	"	23732.1	"
To Port Clinton;	"	209° 08′ 23.″76;	"	35577.7	"
To Blackspot;	"	264° 02′ 30.″27;	"	25029.5	"
To Beartown;	"	330° 04′ 36.″10;	"	31167.0	"

Blackspot Station.—Situated in Alsace township, Berks county, on Penn mountain, about two miles east of the city of Reading:

Latitude, 40° 20′ 51″.148. Longitude. 75° 54′ 09″.864.

To Beartown;	azimuth,	17° 42′ 30″.26;	distance,	31050.6	meters.
To Womelsdorf;	"	84° 13′ 53″.03;	"	25029.5	"
To White Horse;	"	119° 30′ 14″.04;	"	37979.9	"
To Port Clinton;	"	165° 18′ 11″.61;	"	29465.5	"
To Topton;	"	232° 18′ 30″.51;	"	23564.1	"

White Horse Station.—Situated near the boundary line between Berks and Schuylkill counties, about five miles south of the post-office Rock:

Latitude, 40° 30′ 55″.192. Longitude, 76° 17′ 33″.950.

To Gov. Dick;	azimuth,	24° 55′ 46″.04;	distance,	32925.3	meters.

To Smith's Gap;	"	155° 12′ 42″ .13;	" 40889.5 "

The positions of the four primary stations, Bethel, Yard, Willow Grove, and Newtown, are also accurately known, thus making seventeen stations in Pennsylvania whose geographical positions are definitely fixed. In addition, the stations Winterstown and Round Top have been occupied, and the stations Dauphin, Swatara Gap, Bear's Head, and Pimple Hill have been observed upon from two or more points, so that their positions are approximately known. The other stations marked on the sketch have been selected on reconnoissance, but are not yet definitely marked.

Numerous angle measurements have also been made of the directions to church spires and prominent buildings, in the principal towns and villages of the region covered by the triangulation, and whose positions have thus become known.

Progress of the Triangulation.

During the year 1884, the station Swatara Gap was occupied, and the angles at that point measured. In order to briefly describe the method of observation, it may be said that the instrument employed was a ten-inch repeating Gambey theodolite reading by two verniers to three seconds. The five lines radiating from Swatara Gap form ten angles, upon each of which sixteen sets of four repetitions each were made, eight sets being taken from left to right, and eight from right to left, while in each set two repetitions were made with the telescope in the direct, and two in the reverse, position. The number of measures was hence 640, the number of pointings 1,280, and the number of vernier readings 480.

The following are the observed and adjusted values of the angles at Swatara Gap, the average uncertainty or probable error of an observed value being 0″.45, and of an adjusted value 0.″29.

	Observed.	*Adjusted.*
Dauphin—Round Top,	30° 49′ 00.″32	00.″38
Dauphin—Gov. Dick,	85° 47′ 09.″01	09.″22
Dauphin—Womelsdorf,	130° 48′ 22.″81	22.″27
Dauphin—White Horse,	173° 06′ 43.″37	43.″64
Round Top—Gov. Dick,	54° 58′ 08.″06	08.″84
Round Top—Womelsdorf,	99° 59′ 22.″12	21.″89
Round Top—White Horse,	142° 17′ 43.″74	43.″26
Gov. Dick—Womelsdorf,	45° 01′ 12.″02	13.″05
Gov. Dick—White Horse,	87° 19′ 34.″47	34.″42
Womelsdorf—White Horse,	42° 18′ 21.″12	21.″37

The instrument was placed upon a tripod about forty-five feet above the ground, around which an independent platform was built, so that the motions of the observer could not affect the theodolite. For signals heliotropes were used at Round Top and Womelsdorf, and targets at the three other stations.

During the season, the tower at Dauphin was raised to a height of fifty-

two feet. The stations Mexico and Doubling Gap were definitely located, the center marks put in, and towers erected over them. On examining the locality at Grave Ridge, it was found necessary to move the station to a hill about four miles distant, called Piney mountain, where the center marks were established and a tower erected. The station Green Ridge was also abandoned, and one selected in its place eight miles southward, at Mount Misery, about a mile south of the Maryland line. The quadrilaterals, shown in the sketch, are thus preserved without great changes in the angles, while from Mount Misery and Two-Top mountain a connection with the Maryland triangulation can be easily made at the stations Fairview, Maryland Heights and Sugar Loaf in that State. In this manner, a second horse-shoe chain of triangles may be arranged for computation around to the base, Principio-Meeting house.

A reconnaissance was also begun between the seventy-fifth and seventy-seventh meridians to connect the stations along the Blue and Broad mountains with those in the State of New York. The peak called Penobscot knob, eight miles south of Wilkes-Barre, has been definitely selected as one of the stations, and it is thought that a good system of triangles and quadrilaterals can be laid out to the northward along the east branch of the Susquehanna.

ON THE PRECISION OF CHAINING.

By MANSFIELD MERRIMAN, *Professor of Civil Engineering in Lehigh University, Bethlehem, Pa.*

When a line is chained, the result of the operation is a number which expresses how many units and parts of a unit are included between its extremities. This number by no means gives the true length of the line, but, in general, it expresses only an approximate value, which may be greater or less than the true one, and which may be rendered more precise by subsequent measurements.

For example, consider a line whose length is found by pacing to be 440 feet. The accuracy of this result depends upon the nature of the ground and upon the skill of the pacer, and, in any event, is liable to an uncertainty of several feet. Again, let it be measured by an engineer's chain, and suppose the value 446 feet to be obtained. This result is a closer approximation to the true length, but is likewise only an approximation liable to an uncertainity of, perhaps, as much as a foot. If a third measurement with a common steel-tape be made, the value 445.3 feet may be found, and this

should be more accurate than either of the preceding results, and hence its uncertainty be less. A fourth investigation, made by carefully measuring it with wooden rods, like a base line, might give a value such as 445.36 feet, and the uncertainty in this result ought to affect the last decimal only.

The word uncertainty, as here used, means a quantity of such a magnitude that it is equally likely that the difference between the true and observed values is greater than or less than it. The observed length of the line may exceed or be less than the true length, and the uncertainty may be said to represent the average discrepancy. Thus, for the above cases, the uncertainties in the observed values might be about as follows:

By pacing, length=440, with uncertainty of 5 feet.

By chain, length=446, with uncertainty of 0.8 feet.

By tape, length=445.3, with uncertainty of 0.2 feet.

By rods, length=445.36, with uncertainty of 0.05 feet.

Neither of these observed lengths is to be regarded as the true length of the line, but only as a greater or less approximation to it. The precision of the last result is the greatest, and its uncertainty least, but subsequent investigations may alter that value, and give one of greater precision. All that can be said at present is that the length 445.36 is the most probable value, and that it is equally probable that the true value may differ from it by more or by less than 0.05 feet; or in other words, it is an even wager that the true length of the line lies between 445.31 and 445.41, or that it lies outside of those limits.

In the measurements of astronomy and geodesy, the statement of an observed result is not complete unless accompanied by its uncertainty. When this is given, a clear idea is presented of the precision of the measurements and of the degree of confidence which we may place in the result. The mere statement that the length of a line is 956.3 feet gives little idea of the precision or accuracy of that result, unless qualified by an explanation of the method of measurement, or by a numerical expression of its uncertainty. In land-surveying, the practice of expressing the uncertainty of results has not yet been introduced, partly because the methods of measurement in the past have been rude, and partly because little attention has been paid by surveyors to the important subject of the precision of observations. But now as land is becoming more valuable, the importance and necessity of more accurate field-work has become recognized. New instruments and new methods are coming into use, and probably the time is not far distant when a thorough discussion of the subject of errors of observation and of the precision of measurements will be an essential and necessary part of every text-book on surveying.

It is the object of this paper to give a brief statement of the method by which the uncertainty of chaining can be determined. The uncertainty, as has been seen, is a measure of the precision of the results: the smaller the uncertainty the greater the precision. Every surveyor understands to a

certain extent the reliability or creditability of his field-work; he knows how, in special cases, agreements or discrepancies have been met; he knows what errors in balancing are liable to occur, and yet he may be able to form but little idea of its absolute uncertainty or of its relative precision as compared with the work of others. If, in each method of chaining, each surveyor could state in figures the uncertainty for each variety of ground, an interesting and instructive comparison would be possible which ultimately would lead to an increase in the precision of field-work.

In chaining there are many sources of error which tend to cause disagreement between the observed and true lengths of a line. The chain may not agree with the standard, it may not be drawn to the proper tension, it is subject to side deviations, it may be kinked, it may not be held horizontal, the pins may not be properly set at its ends, the extremities of the line may not be definite points, and there may be errors in estimating fractions of a link or even in counting the links. In a line of some length, these sources usually combine together so as to make the measured length different from the true length, this difference being the total error of the operation. On a second measurement the sources combine in a somewhat different manner so as to give an error of another value, and hence the two observed lengths disagree.

Errors in measurements are of two classes: constant and accidental. Constant errors are those which always, under the same circumstances, have the same value, such, for example, as those due to a constant difference between a chain and the standard. The first duty of a surveyor is to investigate these constant sources of error and conduct his operations so that the results will be as free from them as possible. For instance, the effect of side deviations in increasing the distance may be removed by making the chain slightly longer than the length of the standard, although it is better to have the chain exact and not allow the side deviations to exist.

After removing the constant errors there still remain the accidental sources of error due to numerous unknown causes whose effects cannot be estimated. These cause disagreement in the results, and by a study of these disagreements it is possible to obtain information regarding the laws of the precision of observations. The science which discusses these questions is called the method of least squares. The rules of that science which are needed for the discussion of the precision of chaining will here be stated without proof, reference being made to text-books on the method of least squares for the reasoning by which they are established.

The first principle that will be needed is that the uncertainty in a measured value of a line increases as the square root of the length. For instance, if the uncertainty in pacing a line 500 feet long be 10 feet, the uncertainty in pacing one 1000 feet long would not be 20 feet but only 14 feet, 14 being very nearly 10 times the square root of 2. In general, let r be the uncertainty in a line whose length is l, and let R be the uncertainty in a line of the length unity, then

$$r = R\sqrt{l}$$

This principle is a very important one, but it should not be forgotten that it applies only to the uncertainty caused by the accidental errors of measurement. The effect of constant errors in causing discrepancies increases usually very nearly as the length of the line, but these effects are always supposed to be eliminated.

Now, the important question concerning the precision of chaining is this: what is the value of R? Or, in other words, what is the uncertainty in a line of the length unity for each method of chaining and for each kind of ground? What is the usual value of R in rough mountain-work with a Gunter's chain? What is the value of R in farm-surveying? What is its value on country roads, and in towns, when the engineer's chain and the steel tape are employed? What is the value of R for skilled and what for inexperienced chainmen? These are questions difficult to answer at present because of the lack of necessary data. The following example, however, shows how experiments and computations may be conducted by which its value may be found.

In order to ascertain the value of R for a Gunter's chain, drawn by inexperienced students, a field of ten sides was selected and each side measuted five times. The area of the field was about 40 acres and its perimeter about 83 chains. The lengths of the sides, in chains and links, obtained by the five parties, are given in the following table:

LINE.	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
AB,	8.88	8.87	8.89	8.89	8.87
BC,	0.70	0.70	0.70	0.70	0.70
CD,	6.76	6.79	6.74	6.77	6.79
DE,	17.14	17.16	17.15	17.16	17.15
EF,	5.41	5.44	5.44	5.43	5.44
FG,	0.14	0.13	0.14	0.14	0.13
GH,	4.94	4.94	4.95	4.95	4.94
HK,	8.49	8.52	8.52	8.52	8.52
KL,	10.89	10.88	10.90	10.91	10.88
LA,	20.05	20.06	20.06	20.17	20.05

Of course the same chain was used in all the work. The lines AB, CD, HK, and KL were on ground having a slope of about 10°, but the chain was held horizontal. The other lines were quite level. The ground was generally free from obstructions, and on the whole more favorable to obtaining accurate results than the boundary lines of an average farm. The disagreement in FG is due to a difficulty of defining its exact extremities. In the line LA, the fourth party probably made an error of ten links in counting or recording.

The following is the rule deduced in the method of least squares for finding the uncertainty r when a line has been measured several times: Take the arithmetical mean of the results, and from it subtract each measured value. Square each of these differences and take their sum. Divide this

sum by the number of measurements less one. Find the square root of the quotient, and two thirds of this will be the uncertainty r of one of the observed values. The uncertainty R of a line one unit in length may then, in accordance with the above principle, be found by dividing r by the square root of the length.

To put this into algebraic language, let m be any measured value, and M the mean of the several values, whose number is n. Then

$$r = \tfrac{2}{3}\sqrt{\frac{\Sigma(M-m)^2}{n-1}}$$

which is the uncertainty of a single measurement of the line. Next

$$R = \frac{r}{\sqrt{l}}$$

which is the uncertainty of a single measuremement of a line one unit in length.

To apply this to the line CD, the numerical work may be arranged thus:

m.	M—m.	(M—m.)^2
6.76	0.01	0.0001
6.79	0.02	0.0004
6.74	0.03	0.0009
6.77	0.00	0.0000
6.79	0.02	0.0004
M=6.77	$\Sigma(M-m)^2=0.0018$.	

In the first column are written the five values obtained for CD, the mean of which is M=6.77. In the second column are given the differences between the mean and each observed value, and in the third column the squares of these differences, whose sum is found to be 0.0018. Then

$$r = \tfrac{2}{3}\sqrt{\frac{0.0018}{5-1}} = 0.0141 \text{ chains.}$$

and finally

$$R = \frac{0.0141}{\sqrt{6.77}} = 0.0054 \text{ chains.}$$

Hence these observations show that the probable error or uncertainty in a single measurement of the line CD was about 1.4 links, and that in each distance of one chain on that line the uncertainty was about 0.54 links.

In the same way a computation of r and R may be made for each of the ten sides of the field, and the following results be determined:

For AB, ... R=0.0022 chains.
For BC, ... R=0.0000 chains.
For CD, ... R=0.0054 chains.
For DE, ... R=0.0013 chains.
For EF, ... R=0.0040 chains.
For FG, ... R=0.0100 chains.
For GH, ... R=0.0018 chains.
For HK, ... R=0.0032 chains.
For KL, ... R=0.0024 chains.
For LA, ... R=0.0075 chains.
Mean value of . . . . . R=0.0038 chains.

The result of this investigation hence is that the uncertainty in measurements made by inexperienced students with a Gunter's chain on ordinary ground is 0.0038 chains, or about 0.4 links per chain of 100 links. As the uncertainty varies with the square root of the length of the line, the uncertainties for lines of different lengths would be about as follows

For 1 chain, ... uncertainty=0.4 links.
For 10 chains, ... uncertainty=1.3 links.
For 100 chains, ... uncertainty=4.0 links.
For 400 chains, ... uncertainty=8.0 links.

By means of these figures, an absolute measure of the precision of the work is obtained. For instance, in laying off a line 100 chains in length, the result obtained is worthy of such a degree of confidence that we could afford to make an even wager that its variation from the truth is as likely to be less than 4 links as to be greater than that amount.

The above method of determining the value of R has the disadvantage that at least four or five measurements of each line are required, since the formula for r is more reliable the greater the number of observations. The following method of computing R may, however, be employed when each line is measured but twice, provided that the number of lines be as great or greater than five or six.

Let each line be measured twice and the differences between the two results be taken. Square these differences and divide each square by the length of its respective line. Add these quotients and divide their sum by the number of the measured lines. Then one half of the square root of this will be the value of R. Or, in algebraic language, let l be the length of any line, and d the difference of the two measured values, and n the number of lines. Then

$$R = \tfrac{1}{2}\sqrt{\frac{1}{n}\Sigma\frac{d^2}{l}}$$

gives the uncertainty in a line of a unit's length.

For example, take the measurements of the sides of the forty-acre field made by parties No. 1 and No. 2:

l	l^1	d	d^2	$\frac{d^2}{l}$
8.88	8.87	0.01	0.0001	0.0000113
0.70	0.70	0.00	0.0000	0.0000000
6.76	6.79	0.03	0.0009	0.0001332
17.14	17.16	0.02	0.0004	0.0000232
5.41	5.44	0 03	0.0009	0.0001665
0.14	0.13	0.01	0.0001	0.0007140
4.94	4 94	0.00	0.0000	0.0000000
8.49	8.52	0.03	0.0009	0.0001062
10.89	10.88	0.01	0.0001	0.0000092
20.05	20.06	0.01	0.0001	0.0000050
				$\Sigma\frac{d^2}{l} = 0.0011686$

In the first and second columns are given the measurements by the two parties. The third column shows the differences or values of d. In the fourth column are the squares of these differences, and the last column gives the results found by dividing each square by the corresponding value of l. The sum of these is 0.0011686. Then

$$R = \tfrac{1}{2}\sqrt{\frac{0.0011686}{10}} = 0.0054 \text{ chains.}$$

This value is somewhat larger than the one found by the first method, and is less reliable, since it depends on a smaller number of observations. If the two short lines BC and FG be rejected as anomalous, the value of R is found to be very nearly 0.004 chains.

The value of R, like any other quantity derived from measurements, is only approximate, and is liable to change when new data are introduced or the number of observations is increased. It is thought, however, that what has here been said will justify the conclusion that the uncertainty in chaining of the kind described is about 0.4 links per chain.

REPORT

OF THE

JOINT COMMISSION ON THE BOUNDARY LINE BETWEEN PENNSYLVANIA AND WEST VIRGINIA,

SAID COMMISSION CONSISTING OF

JAMES WORRALL, JAMES McCULLOUGH, and WILLIAM W. WALKER *on the part of Pennsylvania, and* JOSEPH C. GIST, JOHN J. CHIPLEY, and FRANCIS L. HOGE *on the part of West Virginia.*

The States of Pennsylvania and West Virginia having, by appropriate legislation, provided for the appointment of a joint commission "to examine as to the true location of the monuments which mark the boundary line between those States, and to replace any monuments which have become dilapidated or have been removed from the boundary line between said States," and each State having appropriated the sum of ($4,000) four thousand dollars to defray the expenses of the Joint Commission in accomplishing the object for which it was created, the commissioners met at the Monongahela House, Pittsburgh, Pennsylvania, on the 10th day of April, 1883.

Present, on the part of Pennsylvania: James Worrall, (chairman,) James McCullough, and William W. Walker; on the part of West Virginia: Joseph C. Gist, (chairman,) John J. Chipley, and Frances L. Hoge. An organization was effected by the selection of James Worrall, of Pennsylvania, as chairman, and F. L. Hoge, of West Virginia, secretary of the Joint Commission. The unanimous decision of the commission was to first establish that portion of the line described in the first survey as running due north from the terminus of (5) five degrees of longitude west of the Delaware river to Lake Erie, so far as it was the boundary between the States of Pennsylvania and West Virginia; in other words, from the south-west corner of Pennsylvania, as located by McLean and Neville, (the surveyors, who, in 1784, represented Pennsylvania and Virginia respectively on the survey to complete the work of Mason and Dixon on the east and west line,) to the north side of the Ohio river.

It was decided, after some discussion, to secure from the United States Coast and Geodetic Survey the detail of two of its officers to run the line, and that the principle of the establishment of a true meridian as the boundary of this portion of the line be adhered to, unless good reasoning should be presented for doing otherwise. The work was directed to be done under the supervision of an executive committee, consisting of three members, viz: Messrs. James McCullough, John J. Chipley, and F. L. Hoge, Messrs. McCullough and Hoge to accompany the surveying party running the line. and Mr. Chipley to superintend the placing of the monuments. Mr. C. H, Sinclair, of the United States Coast and Geodetic Survey, was present, and the point at which the running of the line should commence was, after discussion, left to his discretion. The reasons which decided him to commence at the granite monument on the north side of the Ohio river, which marks the south end of the boundary between Ohio and Pennsylvania, are set forth in his report. So full and complete a description of the organization of the party, the running of the line, and the methods used is given in that report, which, together with the maps, accompanies and is made part of this communication, that we deem it unnecessary to here enter upon further details.

The monuments were ordered to be similar to those used in marking the recently established line between Ohio and Pennsylvania; each monument to consist of two solid sandstones, one a cube of (15″) fifteen inches, to be placed exactly on the line, the bottom resting (3′) three feet (3″) three inches below the natural surface of the ground; the other, (1′) one foot square and (3′) three feet long, to be placed on the upper and dressed side of the cube, the portion showing above the surface to be dressed and terminate in an apex. On the north side of the stone last described, is cut the date of this survey, ("1883,") on the south side, the distance in miles and fractions thereof from the south-west corner of Pennsylvania, on the east side, the letter "P," and on the west side, the initials "W. V."

Operations in the field commenced the 1st of May and ended the 30th of June. Captain Chipley came out the latter part of June, and immediately contracted for the monuments and gave personal supervision to getting them out and placed at designated points on the line—a work of much labor and difficulty, owing to the rough and almost inaccessible locations of portions of it. The running of the meridian of the granite monument north of the Ohio river (marking the south end of the boundary between Ohio and Pennsylvania) was completed to the south boundary of Pennsylvania on the 26th of June, and on its terminus being found at a point (54′) fifty-four feet ($5\frac{1}{2}$″) five and one half inches east of the south-west corner, it was decided by the gentlemen supervising the running of the line to call a meeting of the Joint Commission at Pittsburgh for July 3d.

At this meeting, Colonel Worrall, (chairman,) James McCullough, and William W. Walker were present on the part of Pennsylvania, and John C. Chipley and F. L. Hoge, secretary, on the part of West Virginia. Mr.

Sinclair submitted his report of the survey, with plot showing the relations of the various monuments found on the line to the meridian, run by him, from the granite monument on the north side of the Ohio river to the south boundary of Pennsylvania.

A resolution was offered by Captain Chipley, that the following be the true and permanent boundary line between the States of Pennsylvania and West Virginia, to wit: Beginning at the granite monument marking the south end of the boundary line between Ohio and Pennsylvania on the north side of the Ohio river, and passing the old monument on the south side of the Ohio river, recognized as a boundary stone between Pennsylvania and West Virginia, and on a straight line therefrom to the south-west corner of Pennsylvania, marked by an oak post set in a pile of stones and lying (54′) fifty-four feet (5½″) five and one half inches west of the true meridian passing through the granite monument on the north side of the Ohio river.

This resolution was, after discussion, adopted, Colonel Worrall, of Pennsylvania, voting no, being of the opinion that the true meridian should be adopted. It was also decided that the meridian run by Mr. Sinclair should be permanently marked with monuments similar to those used in marking the line, and set at intervals approximately equal, but so as to be intervisible, thus making a permanent line of reference from which any monument on the boundary could, in case of removal or destruction, be easily restored. It will also serve as a line from which local surveyors can determine the magnetic declination of the needle. The contract for furnishing the monuments, made by the executive committee, was approved by the Joint Commission, and it was decided, if sufficient funds remained in hand, to undertake the survey of the east and west line under the supervision of the committee. The facilities for determining the longitude of the south-west corner of Pennsylvania being unusually favorable, Mr. Sinclair was authorized to undertake it. His report on this subject and the east and west line survey, accompanied by maps, accompanies and is made part of this report.

Captain Chipley immediately proceeded to place the monuments on the boundary line adopted by the commission, and also on the meridian line already referred to. The stones marking the latter line are marked on the north side "Meridian." The planting of the monuments was completed on the north and south line by the 10th of August, with the exception of some slight rectifications made under Mr. Hoge's supervision in the following November.

The survey of the east and west line, as made by Mr. Sinclair, practically coinciding with that portion of the line as run by McLean and Neville in the first survey, it was decided to mark this portion of the line with monuments similar to those used on the north and south boundary.

This was done under Mr. McCullough's supervision during the past summer. In placing the monuments, both on the meridian and parallel boun-

dary, the commission deemed it unnecessary to place them at regular intervals, but have located them on the most commanding ridges and most traveled roads which intersect the line, but so that they shall be intervisible.

As no decision could be arrived at by the commission as to the true location of the south boundary of Pennsylvania beyond Lantz's hill, the point referred to in Mr. Sinclair's report, until the running of the parallel of latitude was completed to the Maryland boundary, which could not be accomplished without an additional appropriation, it was not deemed advisable to take further action until such appropriation should be made.

The expenditures of the State of Pennsylvania, in which the traveling expenses and per diem of commissioners are not included, amount to ($2,890) twenty-eight hundred and ninety dollars. Those of the State of West Virginia, which include the per diem and traveling expenses of members of the commission, amount to ($3,635 58) thirty-six hundred and thirty-five dollars and fifty-eight cents.

The amount required to complete the survey of the parallel boundary and mark the line is estimated at ($2,500) twenty-five hundred dollars.

Joseph C. Gist, *Chairman*,
John J. Chipley,
Francis L. Hoge,
Commissioners on the part of West Virginia.

James Worrall, *Chairman*,
James McCullough,
William W. Walker,
Commissioners on the part of Pennsylvania.

Note.—The report of the Boundary Commission was not received in time to secure for it the place most appropriate to it in the Report of this Department.—J. S. A., *Sec. Int. Aff.*

APPENDIX.

BOARD OF PROPERTY.

A Board of Property, consisting of the Attorney General, Secretary of the Commonwealth, and Secretary of Internal Affairs, is authorized by law. Their powers are to "hear and determine in all cases of controversy on caveats, in all matters of difficulty or irregularity, touching escheats, warrants on escheats, warrants to agree, rights of preëmption, promises, imperfect titles, or otherwise, which heretofore have, or hereafter may arise, in transacting the business of the said Land Office."

The present Board consists of:

LEWIS C. CASSIDY, *Attorney General*,

WILLIAM S. STENGER, *Secretary of the Commonwealth*,

J. SIMPSON AFRICA, *Secretary of Internal Affairs*.

Clerk of the Board, J. W. GREENLAND.

Stated meetings of the Board will be held on the Wednesday following the third Tuesday of each alternate month of the year 1885, to wit: January 21, March 18, May 20, July 22, September 16, and November 18. All communications for the consideration of the Board should be addressed to the Secretary of Internal Affairs.

No particular form of caveat is required, but the application, survey, or other office right against which it is entered, together with the reasons for filing the same, should be distinctly stated. After the caveat has been entered, if not more than two years have elapsed before proceeding thereon, either party may apply for a citation, to bring the matter in controversy before the Board, and, after citation issues, must give the opposing party thirty days' notice of the time fixed for hearing the case; and either desiring to take depositions to be read in evidence must give the other at least ten days' notice of the time and place, and before whom they are to be taken.

All other matters, within the powers of the Board to hear and determine, should be brought before it by petition.

WARRANTS AND SURVEYS.

A warrant or order of survey authorizes only the survey of vacant lands, for they alone belong to the Commonwealth to grant. But whether the lands applied for are vacant or not, the land officers do not undertake to

examine, and in most instances do not possess the means of ascertaining. Of this the applicant must judge for himself. If he knows them to be appropriated by prior right, it is against conscience to take out a warrant for them, or to have them surveyed as vacant. But he may assert the invalidity of a former grant, and insist on a survey. In that case, the deputy surveyor ought, if it be known to him, to note it in his books and return of survey.

RETURNS OF SURVEYS.—Having finished the survey and plotted it, the surveyor ought to return it to the office of the Secretary of Internal Affairs. This is an important part of his duty. Many regulations and laws have, from time to time, required it, and from its omission frequent disputes have occurred. The deputy surveyor, however, is not obliged to return the survey, until his fees and expenses are paid; and if the failure to return is occasioned by the neglect or refusal of the party to defray them, any loss thereby sustained is imputable to him, and not to the officer. The regulations of the proprietaries and the acts of Assembly, concur in directing the return to be made on paying for the survey. * * * If the party pays, or tenders the fees, it is the duty of the surveyor to return the survey in a convenient time, and the neglect or fraud of the surveyor will not affect his rights. But it lies on the party to show that the want of the return was not occasioned by any default or neglect of his own; and, if there is nothing to show that the surveying fees were paid, the inference is that they were not paid. The deputy, being a sworn officer, is, *prima facia*, presumed to have done his duty.

PATENTS.

The patent is a deed from the Commonwealth, under its great seal, conveying to the grantee all its right in the land, describing it by metes and bounds, and passes, as respects the Commonwealth, the complete legal title, all the preparatory measures of warrant, application, survey, and acceptance being merged in the patent. As to third persons, it is *prima facia* evidence that all the previous requisites had been complied with. Before it issues, the purchase money due, [and the patent fee,] must always be paid; and the land is thenceforth discharged from the lien which till then existed. Generally, the grantee is concluded by the lines and boundaries described in the patent, though perhaps in a special case there might be an exception.

Third persons claiming by warrant, application, settlement, or otherwise, may show that the patent was wrongfully issued to the patentee; or rather that he is trustee for him who has the right; the material consideration being, not who has the patent, but to whom it ought to have been granted. For the land officers, in issuing the patent, act merely in a ministerial capacity, and cannot change the rules of law or rights of parties. And even though he who has the patent sell to a *bona fide* purchaser without notice, the vendee is in no better situation. His claim under the patent may be contested by one having a better right by settlement, warrant, or

location. These titles are not equities within the ordinary rule of being unavailing against a purchaser of the legal title. A patent founded on a fraudulent survey, or obtained by misrepresentation and deceit, is void against third persons affected by it.

The patent, however, has always been received in evidence in the first instance, to show that the legal title was out of the Commonwealth. The question whether it is good is a subsequent one.—*Sergeant's Land Laws, p. 155.*

The following regulations, relative to issuing patents, are published for the information and guidance of owners of unpatented lands:

1. The patent must issue to the actual owner of the land, or party holding title under the warrantee, or to the executors, trustees, or heirs and legal representatives of the person in whom title was vested at death, or to the guardians of minor children of the deceased.

2. Warrantees, who remain the owners of the land warranted and surveyed to them, can obtain patents in their own names, (if no eaveat remains undetermined,) without furnishing any brief or statement of title, upon payment of back purchase money, interest, and fees.

3. Executors, trustees, and guardians, representing the warrantee, or his heirs, who apply for patents, should produce evidence of their appointment as such.

4. When the land has passed out of the ownership of the original warrantee, or party who took out the office right, the applicant for patent will be required to furnish evidence of ownership.

5. The present owner of a part of a tract of land surveyed in pursuance of any given warrant, desiring to have a patent in his own name, can obtain it by having the county surveyor make return of survey of such part. In making the survey, the county surveyor must, besides giving the courses and distances, and quantity of acres, in the particular part, indicate the residue of the original tract by dotted lines. The applicant will only be required to pay his proportion of the whole amount due on the tract, with fees. Evidence of ownership to accompany application.

6. When an unpatented original tract has been sold and sub-divided, the several present owners may unite in an application for patent and statement of title, and, upon payment of amount due, with patent and other fees, a patent will issue to them, the said applicants, their heirs and assigns, according to their respective rights and interests, without setting forth the particular interest of each.

7. In cases where it is difficult to submit the evidence of title required by this Department in order to obtain a patent, any one or more of the owners of an unpatented tract can, through this Department, discharge the lien against said tract by the payment of the purchase money, interest, and fees, shown to be due by the land lien docket, and the interest since accrued, and a pat-

ent can at any time afterward be issued to those entitled to it, upon proof of ownership.

8. The accounts in the lien dockets are calculated to June 1, 1868. If to the amount due, as shown in its proper column, there be added the interest accruing from June 1, 1868, to the date of forwarding the docket to the prothonotary, at the rate given in the column of rate per cent. of interest, and on this sum, interest be calculated at the rate of six per cent. from the time of forwarding the docket until the date of the application for patent, it will give the amount required to procure a patent. (See 2d sec. of the act of the 20th of May, 1864, printed on a subsequent page.) But interest is not charged on patent or other fees. (See act of the 5th of May, 1871.)

A statement of the amount due on any particular tract or tracts, or any other information in relation thereto, will be promptly furnished, on application to this Department.

Persons sending money to the Department of Internal Affairs, for payment of arrears on unpatented lands and for records, &c., should send by registered letter, postal order, or express. Drafts, checks, or post-office money orders must be made payable to the order of the Secretary of Internal Affairs.

MISCELLANEOUS.

An indorsement, say for example, "Returned, &c., February 22, 1815," which is frequently found on copies of warrants and surveys, does not mean the date at which the return or survey was received at this office, but the date at which the Surveyor General made a return of the tract to the Secretary of the Land Office for patenting. And when such indorsement is found on the back of a copy of a warrant or survey, even after the date at which the office of the Secretary of the Land Office was discontinued, it is an evidence, in perhaps more than ninety-nine cases out of one hundred, that the tract is patented. Some exceptions have been found. Why the custom of marking the warrants and surveys thus, when a tract was patented, after the office of the Secretary of the Land Office was abolished on the 10th of May, 1844, is not apparent. This custom was discontinued on the 1st of January, 1868, and the indorsement, "Patented to ————, 18—," was substituted.

A mistaken idea, prevalent with many people not familiar with the Land Office, is, that the Department has connected drafts, showing the location of every tract of land surveyed in the several counties, and that, therefore, whatever of vacant land there may be in the State, can be readily found out at this office, and that information can, without difficulty, be given as to the adjoining surveys of any named tract, without advising the Department of the names and dates of the warrants upon which such surveys were made. Had the lands of the Commonwealth been first surveyed, and afterwards sold, this idea would have been correct, but the very reverse

was the fact, for the lands were sold, and warrants for subsequent surveys issued. And, because of this policy, the Department has only single and unconnected copies of the surveys. Unless a given survey calls for warrantee adjoiners, it would be a work altogether out of proportion to the fees allowed, to undertake to search out all the warrants and surveys, perhaps for a whole county, in order to find the adjoining tracts, or search for a supposed vacant piece of land; but the task is comparatively easy, when the party seeking the information learns, as he can more readily do from the county surveyor, or persons in the neighborhood, the names of all the surrounding warrantees, and dates of warrants, and communicates that data to this Department.

It will be observed, from the foregoing, that in communication with the Department, it is of the first importance to give the name of the warrantee and date of warrant of the survey or patent about which inquiry is made; but when the date of warrant cannot be given, the party asking for official copies or information, should give quantity of acres, location, and any other data in his possession, that will aid in searching for the tract.

Frequently applications for warrants for land, made out in due form, are sent to the Department, unaccompanied by the purchase money and warrant fee. Of course the warrants cannot issue until the proper amount of money is paid into the State Treasury, and the applications thus made gain no priority over others, that might be made for the same lands, until all the requirements of law are complied with.

The law does not contemplate that credit should be given on account of fees for searches and official copies, and, therefore, to save correspondence, and insure more speedy attention, the proper amount of fees should be sent with each order. If too much is forwarded, the surplus will be promptly returned, with the official papers asked for.

DATES

At which the county land lien dockets, prepared under the act of the 20th of May, 1864, and the supplement of the 4th of April, 1868, were forwarded to the prothonotaries of the several counties.

INSTRUCTIONS TO COUNTY SURVEYORS.

I. Execution of Warrants.

1. You shall faithfully execute every warrant that shall be directed to you from this Department, to the best of your skill, knowledge, and understanding, *according to the express words* and order of such warrants, and not otherwise.*

2. You shall not make use of any chain-carriers but such as are of good character, who shall take a solemn oath, (which you are authorized by law to administer,) justly and exactly to execute their trust, without favor, partiality, or affection.†

3. You will, on no pretense, execute new warrants upon lands heretofore surveyed on old warrants or orders, but report, as nearly as may be, the circumstances relating to the same. And before you make return of any lands by you surveyed on new warrants, endeavor to be satisfied that no warrant of an earlier date has been issued for the same land; and on your return, certify whether the lands have been improved, and for how many years.‡

4. You must, by no means, execute warrants on any other land than that which they particularly describe; and in order that your returns of survey may appear to be so executed, it will be necessary for you to be particularly attentive to the *adjoiners mentioned in the warrant;* and where there has been any change in them between the issuing and executing of the warrant, it must be noted in your return of survey.§

5. You will be particularly careful in executing warrants granted after the 1st day of June, 1814, and not founded on actual settlement, not to interfere with the rights of settlers, and in all cases where an actual resident settlement is included, note on your return whether it was commenced prior or subsequent to the 28th day of March, 1814.‖

6. You shall not make return of any survey but such as has actually been made on the ground; and you shall take care that all outlines and boundaries shall be fairly and visibly marked before you quit the field.**

II. Returns of Surveys.

7. You are to make a separate return of survey on each warrant or order issued from this Department within six months after the receipt thereof.††

8. Each return of survey shall conform with the following requirements, to wit:

---

* ¶ 1 of instructions of the Commissioners of Property to Isaac Taylor, Proprietary's surveyor for the county of Chester, signed by said Taylor, on the 28th of eleventh month, 1701.

† ¶ 6 of same.

‡ Adopted, February, 1796.

§ Adopted in 1813.

‖ Adopted in June, 1814.

** ¶ 7 of the instructions issued in 1701.

†† ¶ IV of instructions issued in 1765.

I. The paper or parchment used to be of the dimensions of at least eight by twelve inches.

II. It must contain a protracted figure of the land, exactly performed, with the field works annexed.*

III. All streams of water, roads, railroads, canals, township, or county lines, intersecting or crossing the lines of the survey, must be distinctly and visibly marked on the draft at the very place of intersection or crossing, and the distance from the corners expressed in figures on the lines crossed.†

IV. The lines of so much of the adjacent surveys as may serve to show their connection with the survey returned, to be represented on the draft by dotted lines.‡

V. When a survey is bounded by a creek or river, the bearings and distances of the several meanderings must be given.§

VI. Note, whenever they can be obtained, the *warrantee* names of adjoining tracts, as well as the names of the present owners thereof.

VII. The certificate on each return of survey to be made in accordance with the proper form, as printed in the annual reports of the Department.

9. When you return a survey of a part of a tract of land for patenting, you must specify the name of the warrantee, the date of the warrant, and the number of acres contained in the whole tract, and on the draft represent the residue of the tract by dotted lines.‖ But you are, in no event, to make and return to this Department a " re-survey " of a tract, either to include more land or to exclude any part, or in any wise alter the original boundary lines thereof, *unless authorized to do so by an order of the Board of Property.* When an order of re-survey has been issued, and sent to you for execution, you are strictly to follow the directions therein contained.

10. You may make official returns of surveys actually made by your predecessors, after having satisfied yourself of their correctness, and that they have been located according to the calls of the warrants.**

11. Surveys intended to be returned to this Department must be made or approved by you.

12. You may survey and return any surplus not exceeding one hundred acres above the quantity mentioned in the warrant, location, or order of survey. The purchase money for all the surplus land surveyed on warrants, must be first paid into the State Treasury, before the return of survey can be accepted in this Department, of which you will give notice to the owner

---

* ¶ IV of instructions issued in 1765.

† Adopted 1813.

‡ From ¶ 6 of instructions issued in 1796.

§ From ¶ 3 of instructions issued in 1796.

‖ ¶ 6 of instructions issued in 1813.

** ¶ 9 of instructions issued in 1833.

or owners of such warrant, and always send the money to pay the excess, with the return of survey.*

13. All returns of survey, in order to conform with the files of the Department, should be folded as follows: Double the sheet by bringing the upper and lower edges of the sheet evenly together, then fold in each side so as to make a form about two and seven eighths inches wide and in length from six to seven inches, according to the size of the sheet. The back of the return should be left blank.

14. With each return of survey send a copy of the tabling and calculation thereof on a separate piece of paper.†

15. All returns to this Department must be under cover, directed to the Secretary of Internal Affairs, with your name subscribed on the back of the paper or envelope inclosing the same.‡

III. Office Duties.

16. You are to keep your office open for the reception of all warrants directed to you, which shall be entered in a book, kept for that purpose, distinguishing therein the name of the warrantee, quantity of land granted, date of warrant, and the day when you received it. Also, in another book, you shall keep fair and regular entries, in order of time, of all surveys and re-surveys by you made, in pursuance of any warrant or order of survey which you shall receive, with a draft or plot thereof, and field works annexed. And the Secretary of Internal Affairs shall, from time to time, have free access to said books of entries and to all other papers relating to your office.§

17. Under the provisions of the Constitution of 1873, you are required to keep your office at the county town, but if you desire letters sent to any other address advise this Department.

18. Before you can enter upon the duties of your office, you must comply with the seventh section of the act of Assembly, passed the 9th day of April, 1850, which requires you to take an oath or affirmation, which must be administered in the open court of quarter sessions,‖ and send a copy of said oath, duly certified, to this Department; and have your bond approved by the court, recorded in the office for recording deeds in the proper county, and forward the same to the *Secretary of Commonwealth*, with one dollar, the fee for filing in his office.

---

*Act of 13th March, 1817; repealed by act of 6th of April, 1830; restored by act of 21st April, 1869.

† Adopted 1853. See forms.

‡ Adopted June 7, 1824.

§ ¶ VIII of the instructions of 1795.

‖ Constitution, Art. VII, Sec. 1, requires oath of all county officers to be filed in the office of the prothonotary of the proper county.

RECENT LEGISLATION RELATING TO THE LAND OFFICE.

COUNTY SURVEYORS.

Their Duties.

Under the Proprietary government, deputy surveyors were appointed by the Proprietary, the Commissioners of Property, or the Surveyor General, for certain districts, and given authority to execute warrants or orders, by making surveys and returns thereof to the Land Office. The duties of these deputies were defined by letters of instructions, issued from time to time. Those dated the 28th of eleventh month, 1701, revised and enlarged in 1765, contain such directions as were then deemed necessary for the information and guidance of the deputies, and formed the basis of those now in force. The act of Assembly of the 9th April, 1781, establishing the Land Office under the Commonwealth, authorized the Surveyor General to appoint a deputy or deputies in any county of the State, who should have power to make and return into the Land Office surveys of land only in the county for which such deputy or deputies shall be appointed; and the act of 1st April, 1784, by virtue of which the Land Office was opened on the 1st day of July following, for the sale of the vacant lands of the Commonwealth, directed that its several officers should transact the business of the Land Office, agreeably to the former customs and usages thereof. By subsequent legislation, the duties of the deputies were more clearly defined. The act of the 9th April, 1850, [P. L. 434,] authorized the voters of each county, at the following general election, and every third year thereafter, to elect one competent person, being a practical surveyor, to act as county surveyor for the proper county for the term of three years, who is required to do and perform all the duties which then pertained to the respective deputies of the Surveyor General.

Term of Office.

[*Constitution, Art. XIV.*]

SECTION 1. County officers shall consist of sheriffs, coroners, prothonotaries, registers of wills, recorders of deeds, commissioners, treasurers, surveyors, auditors or controllers, clerks of the courts, district attorneys and such others as may, from time to time, be established by law. * * * *

SECTION 2. County officers shall be elected at the general elections and shall hold their offices for the term of three years, beginning on the first Monday of January next after their election, and until their successors shall be duly qualified; all vacancies not otherwise provided for shall be filled in such manner as may be provided by law.

To Keep Office in the County Town.

Section 4. Prothonotaries, clerks of the courts, recorders of deeds, registers of wills, county surveyors, and sheriffs, shall keep their offices in the county town of the county in which they respectively shall be officers.

To Hold Office Until Successor is Qualified.

[*Act of 17th April, 1869. P. L., 67.*]

A supplement to an act, entitled "An act relative to the election of Auditor General, Surveyor General, and county surveyors by the people," approved April ninth, one thousand eight hundred and fifty.

Section 1. That the persons now or hereafter holding the office of county surveyor shall continue to hold and exercise all the duties appertaining to said office, until their successors are duly qualified according to the provisions of the act to which this is a supplement

Fees.

[*Act of 13th of April, 1859. P. L., 606.*]

An act relating to the fees of county surveyors.

Section 1. That the several county surveyors of this Commonwealth shall be and are hereby authorized to charge and receive for the services hereinafter mentioned, the following fees, and no more, to wit:

For receiving warrant and giving receipt for the same, if required, .	$? 25
For executing warrants, not exceeding one hundred acres, ...	4 50
For each additional one hundred acres on same warrant, ...	75
For return of surveyor to Surveyor General's office, [Department of Internal Affairs,]	1 00
For draft thereof to the warrantee, ...	25
For executing order of re-survey and making return thereof, same fees as for like service on original survey.	
For certifying survey made by deputy, ...	50
For each mile necessarily traveled in going to and returning from land, ...	10

EXCESS.

[*Act of 21st April, 1869. P. L., 87.*]

An act relative to returns of surveys to the office of the Surveyor General.

Section 1. That so much of the second section of the act approved the sixth day of April, Anno Domini one thousand eight hundred and thirty, as restricts returns of surveys on warrants thereafter to be issued to an amount not greater than ten per centum beyond the number of acres for which the warrant issued, be and the same is hereby repealed: *Provided*, That any excess which may be returned under the provisions of prior laws shall be paid at the time of making such return of survey to the Surveyor General, otherwise the same shall not be accepted.

[Any surplus not exceeding one hundred acres, may now be returned on any warrant or order of survey, provided that the money for such surplus accompanies the return. See paragraph 12 of "Instructions to County Surveyors."]

FEES.

[*Act of 15th April, 1873. P. L., 75.*]

An act relating to the fees of the Surveyor General.

SECTION 1. That from and after the passage of this act the fees to be collected by the Surveyor General, for the use of the Commonwealth, shall be as follows, namely:

For warrant, including return thereof,	$5 00
Patent for five acres or less,	5 00
Patent for more than five acres,	10 00
Copy of patent,	1 00
Certificate with seal of office on patent, when mortgage is discharged,	50
Every search,	25
Calculation of money due on land, including search,	50
Caveat,	1 00
Issuing citation,	1 00
Recording application for and making order of re-survey,	1 00
Order of the Board of Property, directed by the Surveyor General to the county surveyor to be executed,	1 00
Copy of action or determination of Board of Property, with seal,	1 00
Order for valuing islands,	2 00
Entering application on petition to the Board of Property, together with the minutes thereon, for any other purpose than a re-survey,	1 00
Certified copy of a draft of a single tract, with certificate and seal,	1 00
Connecting separate drafts into one general draft, with certificates for each separate draft therein,	75
Copy of general draft of town or out-lots, for each tract of land therein described,	25
Extract from a general draft, for each tract of land therein described,	25
Copy of draft of lots or tracts of land annexed to certificate of Connecticut claimants or others, for each tract,	75
Copy of warrant, application or any other office right, relating to but one tract of land not hereinbefore enumerated,	50
Copy of extract from the deputy surveyor's list of returns, and all other extracts not hereinbefore recited, for each tract,	25
Copy of any record or paper or any part thereof, not included in the foregoing, for two hundred words or less,	50
And for every ten words additional,	1
Certifying and affixing seal of office to any copy, connected draft, extract, certificate, or minute,	25

Section 2. All laws and parts of laws inconsistent herewith are hereby repealed, so far as they relate to the fees of the Surveyor General.
Entering lien, under act of 20th May, 1864, for each tract, ... $5 00

LIENS FOR UNPAID PURCHASE MONEY.

1. Lists of unpatented lands to be forwarded to prothonotaries.
2. Unpaid purchase money, &c., to be entered on lien docket. Interest.
3. Prothonotaries to docket descriptive lists of unpatented lands. Courts, on hearing, may strike off such entry.
4. Supplied by paragraph 10.
5. Repealed by act of April 4, 1868.
6. Graduation act of 1835, continued until November 1, 1864.
7. Attorney General to proceed on liens.
8. Time allowed to persons in the military or naval service.
9. Changed by act of April 15, 1873. [See note.]
10. Land lien dockets. Entries thereon. Fees.
11. Repeals sec. 5 of act of May 20, 1864.
12. Notice to be given when lien dockets have been forwarded to prothonotaries.
13. No suit to be entered for one year.
14. Release of liens on proof of payment.
15. Board of Property to regulate suits for unpaid purchase money. Interest not to be charged on fees.
16. Lists to be furnished to county surveyors.
17. County surveyors to give notice to owners or occupants.
18. County surveyors to make report to Surveyor General.
19. Surveys to be made of parts of original tract.
20. Suits to be by *scire facias*. Service.

[*Act of 20th May, 1864. P. L. 914.*]

An act directing the entry of liens for the principal and interest due the Commonwealth, for lands held by virtue of locations, or other office titles.

1. Section I. That it shall be the duty of the Surveyor General to make out a list of all lands held by location, or any other office right, issued from the Land Department of this Commonwealth, of every kind and description, upon which no patents have issued, designating the county in which such lands are situated, with such other descriptions of the same as the records of his office will enable him to give, including the names in which such locations or other office rights are entered, and surveys have been returned; and on the list being completed, or any part thereof, be transmitted to the prothonotary of the county in which such lands are situated.

2. Section II. That it shall be the duty of the Surveyor General to calculate the amount of purchase money, interest, and fees, due on each unpatented tract; and after the descriptions of said tracts have been transmitted to the prothonotaries of the respective counties, and entered, as hereinafter provided, the amounts so found to be due, together with five dollars for the labor and costs of making out and filing, shall form an aggregate sum which shall be entered in a lien docket to be provided and

kept for that purpose, and said sum shall bear interest at the rate of six per cent.

3. SECTION III. That it shall be the duty of the prothonotary of each county, upon receiving any descriptive list as aforesaid, to provide a suitable docket, with a proper index, for the purpose of recording all such descriptions of unpatented lands, and shall accurately record the same and index the name of the original warrantee or actual original settler, as the case may be, and each subsequent owner so far as ascertained, and preserve the same among the records of the county: *Provided*, That when any party in interest, by petition under oath or affirmation, setting out the facts in the case, as in affidavit of defense, shall represent to the president judge of the court of common pleas of the county, in which any tract or piece of land, against which the entry directed in the foregoing section has been made, or the principal part thereof, may lie, that said tract has been patented, either in the name against which the entry is made, or in any other name, the said judge shall, after such notice to the Surveyor General as he shall deem proper, proceed to hear the case of the petitioner; and the said judge shall, thereupon, make such decree in the premises, either by directing the said entry to be struck from the record, or such other order as to said entry, and also as to costs, as may seem equitable.

4. SECTION IV. That it shall be the duty of the prothonotary of each county, upon receiving from the Surveyor General any such list or calculation of amounts due the Commonwealth for purchase money, interest, and fees, to provide a suitable docket with index, in the form of the lien dockets now in use in the several counties of this Commonwealth, to be styled "Lien Docket of Unpatented Lands," and enter therein the amount so found to be due, which sum shall remain a lien upon such tract or tracts, until paid; and that a fee of fifty cents be paid to the prothonotary for each description so entered, and that he be allowed the same fees on the liens entered, as are now allowed on judgments entered by warrant of attorney in the court of common pleas.

5. SECTION V. That it shall be the duty of the prothonotary upon receiving any such descriptive list, to cause the same to be published in two newspapers in the county where such lands are located, for three successive weeks, for which publication he shall be authorized to pay fifty cents for each tract, and charge the same as costs on the lien docket, and retain his fees and costs out of any moneys, in his hands, due the Commonwealth.

6. SECTION VI. The amounts which may be due to the Commonwealth on the lands mentioned in the first section of this act, may be paid in accordance with the existing laws in relation to such lands, if the same be paid prior to the first day of November next: *Provided*, That any costs, which may have accrued in accordance with the provisions of this act, shall also be paid, and that the act to graduate lands on which money is due and unpaid to the Commonwealth of Pennsylvania, approved April tenth, Anno Domini one thousand eight hundred and thirty-five, be re-

vived and continued in force, until the said first day of November next; and any survey and appraisements, made since the first day of August last, shall have the same validity for the issuing of patents thereon, as if the last mentioned law had been still in full force.

7. Section VII. That all liens due the Commonwealth for unpatented lands, after the first day of November, Anno Domini one thousand eight hundred and sixty-four, may be proceeded upon by the Attorney General of the Commonwealth, in the manner directed to be pursued against defaulting public officers, by the act of April sixteenth, one thousand eight hundred and forty-five, and the supplement thereto.

8. Section VIII. All persons in the military and naval service of the United States, shall be allowed one year after the expiration of said service, for the taking out of any patent or patents under the provisions of this act.

9. Section IX.* That, hereafter, the patent fee, on town lots not exceeding one fourth of an acre, shall be one dollar, and on lots not exceeding two acres, five dollars.

[*Act of 4th April, 1868. P. L., 60.*]

A supplement to an act directing the entry of liens for the principal and interest due to the Commonwealth for lands held by virtue of location or other office titles, approved the twentieth day of May, Anno Domini eighteen hundred and sixty-four.

10. Section I. That in lieu of the descriptive lists provided for in said act, it shall be the duty of the Surveyor General to make out and forward to the prothonotaries of the several counties, lien dockets, to be styled "land lien dockets," containing lists of all unpatented and patented lands, situate in the counties respectively, upon which there is money due the Commonwealth, and in all cases where surveys have been returned, to enter therein the amount of purchase money, interest, and all fees due, and said aggregate shall remain a lien on such tract until paid or otherwise legally discharged: *Provided*, That the several prothonotaries shall be allowed to charge the fees now authorized by law when any information shall be desired from said records, and for entering any certificate under the seal of the Surveyor General, setting forth that any lien or part of lien against an unpatented tract has been paid, shall charge the party presenting such certificate a fee of twenty-five cents for entering and filing the same.

11. Section II. That the fifth section of the act to which this is a supplement, and so much of said act as is inconsistent herewith, be and the same is hereby repealed.

---

*Section nine changed by act of April 15, 1873.

[*Act of 8th April, 1869. P. L., 21.*]

An act directing public notice to be given when county land lien dockets are forwarded to the respective counties, and staying proceedings by the Attorney General for one year from the date of forwarding the same.

WHEREAS, The Surveyor General, at an early day, will be prepared to send out the county land lien dockets, containing accounts due the Commonwealth on account of lands, prepared under the act approved the twentieth day of May, Anno Domini one thousand eight hundred and sixty-four, and the supplement thereto, approved the fourth day of April, Anno Domini one thousand eight hundred and sixty-eight:

And whereas, It is proper that the people owing the State, for or on account of lands, should have notice when the liens therefor are entered in the counties, and that a reasonable time should be given to enable them to liquidate their indebtedness and obtain patents for their lands, before suits shall be brought in such cases by the Attorney General; therefore,

12. SECTION I. That when any county land lien docket, prepared under the forgoing acts, shall be forwarded to any county, the Surveyor General is hereby authorized and directed to cause a notice thereof to be given in one English newspaper, published at the county seat of such county, and also in one German newspaper, if there be one in said county, setting forth that the land lien docket for that county has been forwarded to the prothonotary thereof: *Provided*, That no greater sum than ten dollars shall be paid for such notice or advertisement for any one county; and on evidence being submitted to the Auditor General that such advertisement has been authorized by the Surveyor General, and inserted at the usual rates of advertising, he shall draw his warrant on the treasury in favor of the editor or publisher inserting the same.

13. SECTION II. That no suit or suits shall be entered or instituted by the Attorney General, under the provisions of the seventh section of the act of the twentieth of May, Anno Domini one thousand eight hundred and sixty-four, until one year shall have elapsed from the date at which the Surveyor General shall have forwarded to each county, respectively, the land lien docket for the same.

[*Act of 15th April, 1869. P. L. 31.*]

A further supplement to an act directing the entry of liens for the principal and interest due to the Commonwealth for lands held by virtue of locations or other office titles, approved the twentieth day of May, Anno Domini one thousand eight hundred and sixty-four.

WHEREAS, An examination of warrants and returns of survey show in many cases interferences in said returns, and in many instances where patents have issued on some of said surveys, there are balances due upon other warrants covering the same land; therefore,

14. SECTION I. That whenever satisfactory evidence shall be given to the Surveyor General that a lien or liens have been entered against lands for which the Commonwealth has been fully paid, both for land and patent

fees, he is hereby authorized, and it shall be his duty, to give to the party or parties applying for the same a release of said lien or liens, so far as said patented lands are concerned; which said release may be entered on the land lien docket, in accordance with the provisions of the supplement to the act of which this is a further supplement, approved the fourth day of April, Anno Domini one thousand eight hundred and sixty-eight.

[As many persons will apply for releases under the provisions of this law, it is deemed proper to state what will be regarded as satisfactory evidence by this Department. Applicants, in order to avail themselves of the act, should cause a plot or survey of the patented tracts, and the unpatented interfering traets, (showing the manner in whieh, and to what extent they cover the same land,) to be made by the county surveyor, who will eertify that he has made the same at the request of A, B, and C—the owners of the patented tracts, or parts of tracts, or their agents or attorney—giving names of warrantees and dates of warrants and patents, and names and dates of warrants of the unpatented lands, and that he believes the interference or interferenees to be as delineated by him. On a paper appended to the above plot of surveys, the applicant or applicants, his or their agent or attorney, will be required to make an affidavit, that the interferences are believed to be as delineated by the county surveyor. A release will then be issued to the owner or owners of the patented traet or tracts, relieving them from any and all liability to pay the lien of the Commonwealth entered against sueh interfering unpatented tract or traets. Seetion seven of the act approved the 20th day of May, 1864, invested the Attorney General with authority to proeeed against the owners of unpatented lands, to enforce the payment of the arrears of purehase money, interest and fees due the Commonwealth on said lands. This power, by the following supplement, became vested in the Board of Property.]

[*Act of 5th May, 1871. P. L., 261.*]

A further supplement to an act directing the entry of liens for the principal and interest due the Commonwealth for lands held by virtue of location or other office titles, approved the twentieth day of May, Anno Domini one thousand eight hundred and sixty-four.

15. Section I. That the Board of Property shall have full and diseretionary power as to the time of entering suits and the number thereof, to be brought for the collection of liens against unpatented lands; and the Attorney General shall proceed, under the seventh seetion of the said aet, to which this is a further supplement, when authorized to do so by the said Board: *Provided*, That no interest shall be charged on patent or other fees.

[*Act of 11th April, 1872. P. L., 51.*]

A further supplement to an act directing the entry of liens for the principal and interest due the Commonwealth for lands held by virtue of location or other office title, approved the twentieth day of May, Anno Domini one thousand eight hundred and sixty-four.

16. SECTION I. That for carrying into full effect the provisions of the act to which this is supplementary, it shall be the duty of the Surveyor General to make out and forward to the several county surveyors, respectively, from time to time, as the Board of Property may determine, special lists of warrantee names of unpatented tracts, or remaining parts of unpatented tracts, of lands within the several counties, as the same may appear upon the land lien dockets, with such other data relating thereto as he may deem necessary.

17. SECTION II. That it shall be the duty of the county surveyor of each county, to whom the Surveyor General may send special lists of warrantee names of unpatented tracts or parts of tracts of land, and other data relating thereto, situate in the county for which such surveyor shall have been elected or appointed, to endeavor to ascertain the names and residences of the owners, agents, or occupiers, and location of said tracts or parts of tracts, or any of them, and to give personal notice in writing to said owners, agents, or occupiers, that said tracts or parts of tracts are unpatented, and that unless the arrearages shall have been paid within six months from the time of sending or serving said notice, the Board of Property may direct proceedings to be commenced by the Attorney General to enforce payment, under the provisions of the act to which this is a further supplement: *Provided*, That when unpatented lands as aforesaid are unoccupied, and the owners are non-residents of the county, and have no known agent or agents within the county, the said notice may be given by sending it by mail, addressed to the owners or agents, and directed to the post-office nearest their place of residence or usual place of business: *And provided further*, That when lands as aforesaid are unseated, and have been sold for taxes, and the time limited for their redemption has not expired, it shall be the duty of the county surveyor to give notice, in the manner hereinbefore provided, to the purchasers or their agents, and also to the parties, or their agents, who last paid taxes thereon previous to the sale.

18. SECTION III. That it shall be the duty of the county surveyor to whom such special list shall have been sent as aforesaid to make a written report in duplicate, within three months, to the Surveyor General, filing a copy of the same in the prothonotary's office of each county, setting forth the names of warrantees, dates of warrants, location of tracts, and the names and residence of the owners, agents, or occupiers of the unpatented tracts or parts of tracts, upon whom he has served the notices as aforesaid, together with the manner of service; and for serving such notices on all the owners, agents, or occupiers of an original unpatented tract, or remaining part of an original unpatented tract, he shall be entitled

to a fee of five dollars, to be paid out of the State Treasury, on warrants drawn by the Auditor General, upon the certificate of the Surveyor General.

19. SECTION IV. That it shall be the duty of the county surveyor, upon the reasonable request of any owner, or his agent, of part of an original tract which has not been patented, to make and return a return of survey of such part to the Surveyor General, and for which service his fees shall be the same as for executing a warrant of survey, as now provided by law for the same quantity of acres.

20. SECTION V. That when any suits shall be entered by the Attorney General, under the act to which this is a further supplement, it shall be by *scire facias sur liens*, which shall be directed for service to the sheriff of the county in which the land is situate; and if he finds it necessary to insure a service of said writ, he may call to his aid the county surveyor, who shall act as his deputy, for the purpose of serving such writ; and all such writs shall be made returnable to the court of common pleas of the county wherein such lands are situate, where all such suits shall be tried.

SECRETARY OF INTERNAL AFFAIRS.

[*Constitution, Art. IV.*]

[Section I names the Secretary of Internal Affairs as one of the Executive Department, and section 9 constitutes him a member of the Board of Pardons.]

SECTION XIX. [I.] The Secretary of Internal Affairs shall exercise all the powers and perform all the duties of the Surveyor General, subject to such changes as shall be made by law. His department shall embrace

[II.] A bureau of industrial statistics,

[III.] And he shall discharge such duties relating to corporations, to the charitable institutions, the agricultural, manufacturing, mining, mineral, timber, and other material or business interests of the State as may be prescribed by law.

[IV.] He shall annually, and at such other times as may be required by law, make report to the General Assembly.

SECTION XXI. The term of the Secretary of Internal Affairs shall be four years. * * * * * * *

[*Art XVII.*]

SECTION XI. The existing powers and duties of the Auditor General in regard to railroads, canals, and other transportation companies, except as to their accounts, are hereby transferred to the Secretary of Internal Affairs, who shall have a general supervision over them, subject to such regulations and alterations as shall be provided by law; and, in addition to the annual reports now required to be made, said Secretary may require

special reports at any time upon any subject relating to the business of said companies from any officer or officers thereof.

[These provisions of the Constitution are enforced by acts of Assembly, passed in pursuance thereof, approved respectively on the 11th day of May, 1874, P. L. 135; the 15th day of May, 1874, P. L. 172 and 193; and by the following:]

[*Act of 8th May, 1876. P. L., 143.*]

A further supplement to an act regulating the election of Secretary of Internal Affairs, defining his duties and fixing his salary, approved the eleventh day of May, Anno Domini one thousand eight hundred and seventy-four.

SECTION I. That the Secretary of Internal Affairs and his chief clerk, who shall hereafter be designated Deputy Secretary of Internal Affairs, shall have power and authority to administer oaths or affirmations in any or all matters pertaining to the business of his Department.

SECTION II. All maps, drafts, reports, and other papers relating to surveys of State or county lines, State or turnpike roads, railroads, canals, or other public improvements now remaining in the office of the Secretary of the Commonwealth, and not connected with the other records of his office, shall, as soon as practicable after the passage of this act, be transferred to the Secretary of Internal Affairs, who is hereby authorized and directed to receive and deposit the same in his Department; and all such maps, drafts, reports, and papers as are now by law required to be placed in the office of the Secretary of the Commonwealth, shall hereafter be deposited in the Department of Internal Affairs.

SECTION III. It shall be the duty of all commissions appointed to reëstablish any of the boundary lines of this Commonwealth, to erect a new county, or to annex part of one county to another county, to transmit a copy of their report to the Secretary of Internal Affairs, to be by him deposited in his Department.

SECTION IV. It shall be the duty of all commissions appointed to re-survey, re-mark, alter, or change any county line, to deposit duplicate copies of their report in the office of the clerk of the court of quarter sessions of the proper county; and after the same has been confirmed by said court, the said clerk shall, upon one of the copies, certify such confirmation, and immediately transmit the same by mail to the Secretary of Internal Affairs to be by him deposited in his Department.

SECTION V. Copies of all records, documents, entries, and papers now in the Department of Internal Affairs, or that may be transferred thereto in pursuance of this act, or that may hereafter be deposited therein according to law, shall be made and certified at the request of any person applying for the same, on the payment of the same fees as was prescribed by the fee bill for similar services in the Surveyor General's office at the time the same was merged into said Department, which fees shall be accounted for and paid into the Treasury in the same manner as is now provided by law for other fees, to be collected by the said Secretary; and the said copies shall

be received in evidence in the several courts of this Commonwealth, in all cases where the original records, documents, entries, and papers would be admitted in evidence.

* * * * * * * * * *

WARRANTS.

[*Act of 14th April, 1874. P. L., 58.*]

An act relative to the issuing of warrants to survey vacant lands.

Section I. That every applicant for a warrant to survey any of the vacant lands of this Commonwealth shall produce to the Surveyor General a particular description of the land applied for, with an affidavit of a disinterested witness, made before a justice of the peace of the township or borough in which the land applied for, or the greater portion of it, is situate, or if there be no justice of the peace in such township or borough, before a justice of an adjoining township or borough, specifying whether the said land be improved or not, and if improved, how long since the said improvement was made, that interest may be charged as now provided by law. The applicant for such warrant shall declare, upon oath or affirmation, before a justice of the peace of the township or borough in which the land or greater portion of the same is situate, or if there be no justice in such township or borough, before a justice of an adjoining township or borough, that he verily believes that no warrant or other office right has previously issued for such land, or if one has issued, after giving full particulars in relation thereto, shall depose that he verily believes it has been abandoned; and if at any time thereafter it shall appear that the person or persons deposing, as aforesaid, or any of them, shall knowingly have sworn falsely, such person or persons shall suffer all the pains and penalties of perjury.

Section II. No warrant shall issue for any tract or piece of land on which settlement is made, or which may be either in whole or in part cleared and fenced, or otherwise improved, used, or occupied and held by defined boundaries, unless to such person or persons, respectively, who have made the settlement, clearing, fencing, or improvement, their legal representatives or assigns, upon proof of ownership of such settlement or improvement right, and if any warrant shall issue otherwise than as aforesaid, it shall be void: *Provided*, That this section shall not apply to abandoned improvements.

Section III. Every applicant for a warrant to survey vacant land shall, after filing his or their application for such warrant, and depositing the amount of the purchase money and fee with the Surveyor General, give at least thirty days' notice of the filing of said application, with a full description of the land as set forth in the application, by publication once a week for three successive weeks, in one or more newspapers of the county in which the land is situate, and nearest its location, and shall furnish

proof that such notice has been given, before a warrant shall issue: *Provided*, That if any *caveat* or *caveats* shall have been entered against issuing such warrant, the same shall not issue until directed by the Board of Property; and if the Board of Property, after a hearing upon a citation issued in pursuance of any *caveat*, shall decide against issuing the warrant, the purchase money shall be returned to the applicant.

SECTION IV. This act shall not apply to applications for warrants filed with the Surveyor General before its passage.

PRICES OF LAND IN PENNSYLVANIA AT VARIOUS PERIODS.

Prices under Penn and his Heirs.

Previous to the 27th of December, 1762, £15 10s. ($41 33) per hundred acres, with the exception of a few warrants in the lower counties at £3 10s. ($9 33) per hundred.

From the 27th of December, 1762, to the 5th of August, 1763, £9 ($24) per hundred acres.

From the 5th of August, 1763, to the 6th of August, 1765, £15 10s.. ($41 33.)

Locations and warrants from the 6th of July, 1765, to the 1st of July, 1784, £5 sterling ($22 22.)

Prices under the Commonwealth.

From the 1st of July, 1784, to the 3d of April, 1792, £10 ($26 66⅔) per hundred acres.

New Purchase, 1784—From the 1st of May, 1785, to the 1st of March, 1789, £30, ($80.)

From the 1st of March, 1789, to the 3d of April, 1792, £20 ($53 33⅓.

From the 3d of April, 1792, to the 1st of September, 1817, £5 ($13 33⅓) for land in the purchase of 1784, east of the Allegheny river and Conewango creek, unimproved.

Purchase of 1768 and the Previous Purchases.—From the 3d of April, 1792, to the 28th of March, 1814, at the rate of fifty shillings ($6 66⅔) per hundred acres.

Lands in the purchase of 1784, lying north and west of the rivers Ohio and Allegheny, and Conewango creek, £7 10s., ($20.)

Undrawn donation lands, from the 1st of October, 1813, at the rate of $1 50 per acre.

Donation lands reduced, from the 25th of February, 1819, to fifty cents per acre.

From the 21st of March, 1814, lands within the purchase of 1768, and the previous purchases, to be at the rate of £10 ($26 66⅔) per hundred acres.

From the 1st of September, 1817, lands within the purchase of 1784, east of the Allegheny river and Conewango creek, at the rate of £10, ($26 66⅔,) except such as have been settled on, agreeably to the act of 3d of April, 1792, between said 3d of April and 1st of September, 1817.

Seventeen townships in Luzerne county—price fixed by the commissioners: First class, $2 per acre; second class, $1 20; third class, 50 cents; fourth class, 8¼ cents.

Present Price.

The price of all vacant and unimproved land is now at the rate of £10 ($26 66⅔) per hundred acres, except the following:

Lands lying north and west of the rivers Ohio and Allegheny, and Conewango creek, $20 per hundred acres.

Reserve tracts near Erie, Waterford, &c., price fixed by commissioners.

Lands improved agreeably to the act of the 3d of April, 1792, fifty shillings, ($6 66⅔,) and £5 ($13 33⅓) per hundred acres.

Lands held by Virginia warrants, in the south-west part of the State—the warrants show the terms. Lands were taken under Virginia warrants as low as ten shillings per hundred acres.

It is the practice in the Land Office to charge for the *excess* of land above *ten per cent.* on fifty shilling warrants, at the rate of £10 per hundred acres.

FORMS.

FORM No. 90.

Application for Unimproved Land.

. . . . . of the . . . . . of . . . . . .
in the county of . . . . . appl . . for . . . . . .
acres of land, situated in the township of . . . . . and
county of . . . . . , adjoining lands of . . . . . .
. . . . . on the east,
. . . . . on the south,
. . . . . on the west, and
. . . . . on the north.

To the Secretary of Internal Affairs of the Commonwealth of Pennsylvania. } [Applicant sign.] . . . . . .

. . . . . *County, ss:*

Before me, the subscriber, a justice of the peace, in and for the township of . . . . . , and county aforesaid, personally came . . . . . a disinterested witness, who being duly sworn according to law, did depose and say, that to his certain knowledge the land described in the above application is unimproved.

Sworn and subscribed before me, this . . . . . day of . . . . . 188 . . . . . *J. P.* } [Witness sign.] . . . . . .

. . . . . *County, ss:*

Before me, the subscriber, a justice of the peace, in and for the township of . . . . . , and county aforesaid, personally came . . . . . the above-named applicant , who being duly sworn according to law, did depose and say, that he verily believe that no warrant or other office right has previously issued for the land above

described, either in h own name or in the name or names of any person or persons under whom he claim the same.

Sworn and subscribed before me, this . . day of . . . . . 188 , ... , J. P. } [Applicant sign.] . . . .

NOTE.—If there is no justice of the peace in the township in which the land is situated, the affidavits may be made before a justice of the peace of an adjoining township—in that case the justice should certify that fact.

After the application has been duly prepared, it should be forwarded to the Secretary of Internal Affairs, together with the proper amount of purchase money and warrant fee. The applicant must then give at least thirty days' notice of the filing of the application with the Secretary of Internal Affairs, with a full description of the land as set forth in the application, by publication once a week, for three successive weeks, in one or more newspapers of the county in which the land is situated and nearest its location: and furnish proof that such notice has been given before a warrant can be issued.

Proof of Notice by Publication of Application for Warrant to Survey Vacant Land.

. . . . . *County, ss:*

Before me, a justice of the peace, in and for the said county, personally appeared . . . . . , who, being duly sworn according to law, says that the notice appended, to wit: . . . . . was advertised once a week for three consecutive weeks in the . . . . . published at . . . . . and that the said . . . . . is a newspaper of the county in which the land applied for is situated and nearest its location, and that the notice first appeared in the issue of said paper on the . . . . . day of . . . . . .

Sworn and subscribed before me, this . day of . . . . . , 18 . . . . . , *J. P.* } [Witness sign.]

NOTE—Extract of Act of 14th April, 1874, relative to the issuing of Warrants to Survey Vacant Land.

SECTION 3. Every applicant for a warrant to survey vacant land shall, after filing his or their application for such warrant, and depositing the amount of the purchase money and fee with the [Secretary of Internal Affairs,] give at least thirty days' notice of the filing of said application, with a full description of the land as set forth in the application by publication once a week for three successive weeks, in one or more newspapers of the county in which the land is situate, and nearest its location and shall furnish proof that such notice has been given before a warrant shall issue.

FORM No. 95.

Application for Patent when the Present Owner CAN give a complete statement of the Title from the Warrantee, or other person who took out the Office Right.

I, ... , of . . . . . in the county . . . . . , the present owner of . . . . . acres and . . . . . perches, and allowance of land, now situated in the township of . . . . . and county of . . . . . surveyed on a warrant to . . . . . , dated the . . . . . day of . . . . . , herewith forward the amount of purchase money, interest, and fees due the Commonwealth, and request that a patent shall be issued in name for the said tract.

STATEMENT OF TITLE—

. . . . . .

. . . . . .

To the Secretary of Internal Affairs of the Commonwealth of Pennsylvania. } . . . . . .

. . . . . *County, ss:*

Before me, the subscriber, a justice of the peace, in and for said county, personally came . . . . . , the above named applicant , who, being duly sworn according to law, did depose and say, that, to the best of knowledge and belief, the facts set forth in the foregoing application are true; and further, that he do not know of any other person or persons claiming title to the above described land, under the aforesaid warrantee.

Sworn and subscribed before me, this . . day of . . . . . } . . . . . .
. . . . . , *J. P.* }

. . . . . *County, ss:*

Before me, the subscriber, a justice of the peace, in and for said county, personally came . . . . . , a reputable citizen of the township and county in which the land is situated, for which a patent is asked in the foregoing application, who, being duly sworn according to law, did depose and say, that, to the best of his knowledge and belief, the aforesaid applicant , and those under whom he claim title,

have held the above-described tract of land by peaceable possession, and the exercise of ownership, for more than twenty-one years last past.

Sworn and subscribed before me, this . . . . day of . . . . . , *J. P.* } . . . . . .

Note.—When there is more than one owner of the tract, or when the application is for part only of the original tract, the form can be varied to suit the requirements of the case.

Form No. 96.

Application for Patent when the Present owner CANNOT give a complete statement of the Title from the Warrantee or other person who took out the Office Right.

I, ... , of . . . . . , in the county of . . . . . , the present owner of . . . . . aeres and . . . . . perehes, and allowance of land, now situated in the township of . . . . . , and county of . . . . . , surveyed on a warrant to . . . . . dated the . . . . . day of . . . . . , herewith forward the amount of purehase money, interest, and fees due the Commonwealth, and request that a patent shall be issued in name for the said tract. And further represent, that owing to the length of time whieh has elapsed since the warrant was taken out, and the great number of eonveyanees and assurances in law vesting title to the same unable to give a connected statement of them.

To the Secretary of Internal Affairs of the Commonwealth of Pennsylvania. } . . . . . .

. . . . . *County, ss:*

Before me, the subscriber, a justice of the peace, in and for said county, personally eame . . . . . , the above named applieant , who, being duly sworn aecording to law, did depose and say, that to the best of knowledge and belief, the faets set forth in the forgoing application are true; and further, that he do not know of any other person or persons elaiming title to the above described land, under the aforesaid warrantee.

Sworn and subscribed before me, this . . . . day of . . . . . *J. P* } . . . . . .

. . . . . *County*, ss:

Before me, the subscriber, a justice of the peace, in and for said county, personally came . . . . . , a reputable citizen of the township and county in which the land is situated, for which a patent is asked in the foregoing application, who, being duly sworn according to law, did depose and say, that to the best of his knowledge and belief, the aforesaid applicant , and those under whom he claim title, have held the above described tract of land by peaceable possession, and the exercise of ownership, for more than twenty-one years last past.

Sworn and subscribed before me, this . . . . day of . . . . . , *J. P.* } . . . . . .

FORM A.

For Return of an Original Survey.

A draft of a tract of land situated in the township of . . . . . , and county of . . . , containing . . . . acres . . . perches and allowance of six per cent. for roads, &c. Surveyed the . . . day of . . . . 188 , in pursuance of a warrant granted to . . . . . , dated the . . . . day of . . . . . , 18 .

. . . . . , *C. S.*

To, ... *Secretary of Internal Affairs.*

FORM B.

For Return of a Tract Surveyed by a Former Deputy or County Surveyor.

A draft of a tract of land situated in the township of . . . . . , and county of . . . . , containing . . . . acres, . . . perches and allowance of six per cent. for roads, &c.

Surveyed . . . . day of . . . . . , 188 , in pursuance of a warrant granted to . . . . , dated the . . . day of . . .

I hereby certify that the foregoing is a correct copy of a survey filed

amongst the records of the county surveyor's office of this county, and that it has been examined by me and found correct.

. . . . . , *C. S.*

To . . . . . , *Secretary of Internal Affairs.*

Form C.

For Return of a part of a Tract for Patenting.

A draft of a tract of land situated in the township of . . . , and county of, . . , containing . acres . perches and allowance of six per cent. for roads, &c.

Surveyed for . . the . . day of . . . , it being a part of a larger tract of . . acres . . perches and allowance, originally surveyed in pursuance of a warrant granted to . . , dated the . . day of . . .

. . . . . , *C. S.*

To . . . . . , *Secretary of Internal Affairs.*

Note.—When this form is used, the county surveyor should indicate by *dotted lines* the remainder of the original survey, thus showing the location of the part returned. See paragraph 9 of the instructions to county surveyors.

THE METRIC SYSTEM.

[The use of this system of weights and measures was authorized by an act of Congress, approved the 28th day of July, 1866.]

Measures of Length.

Metric denominations and values.		Equivalents in denominations in use.
Myriameter,	10,000 meters,	6.2137 miles.
Kilometer,	1,000 meters,	0.62137 mile, or 3,280 ft. 10 in.
Hectometer,	100 meters,	328. feet 1 inch.
Dekameter,	10 meters,	393.7 inches.
Meter,	1 meter,	39.37 inches.
Decimeter,	1-10 of a meter,	3.937 inches.
Centimeter,	1-100 of a meter,	0.3937 inch.
Millimeter,	1-1000 of a meter,	0.0394 inch.

Measures of Surface.

Metric denominations and values.		Equivalents in denominations in use.
Hectare,	10,000 square meters,	2.471 acres.
Are,	100 square meters,	119.6 square yards.
Centare,	1 square meter,	1550. square inches.

Measures of Capacity.

Metric denominations and values.			Equivalents in denominations in use.	
Names.	No. of liters.	Cubic measure.	Dry measure.	Liquid or wine measure.
Kiloliter or stere,	1,000	1 cubic meter,	1.308 cubic yards,	264.17 galls.
Hectoliter,	100	1-10 of a cubic meter,	2 bu. & 3.35 pecks,	26.417 galls.
Dekaliter,	10	10 cubic decimeters,	9.08 quarts,	2.6417 galls.
Liter,	1	1 cubic decimeter,	0.908 quart,	1.0567 quarts.
Decileter,	1-10	1-10 of a cubic decimeter,	6.1022 cubic inches,	0.845 gill.
Centileter,	1-100	10 cubic centimeters,	0.6102 cubic inch,	0.338 fluid oz.
Milliliter,	1-1000	1 cubic centimeter,	0.061 cubic inch,	0.27 fluid dr.

Weights.

Metric denominations and values.			Equivalents in denominations in use.
Names.	No. of grams.	Weight of what quantity of water at maximum density.	Avoirdupois weight.
Millier or Tonneau,	1,000,000	1 cubic meter, ...	2204.6 pounds.
Quintal, ...	100,000	1 hectoliter, ...	220.46 pounds.
Myriagram, ...	10,000	10 liters, ...	22.046 pounds.
Kilogram or Kilo, .	1,000	1 liter, ...	2.2046 pounds.
Hectogram, ...	100	1 decaliter, ...	3.5274 ounces.
Dekagram, ...	10	10 cubic centimeters, . . .	0.3527 ounce.
Gram, ...	1	1 cubic centimeter, . . .	15.432 grains.
Decigram, ...	1-10	1-10 of a cubic centimeter,	1.5432 grains.
Centigram, ...	1-100	10 cubic millimeters, . . .	0.1543 grain.
Milligram, ...	1-1000	1 cubic millimeter, ...	0.0154 grain.

Secretaries of Internal Affairs.

William McCandless,	commissioned	May 4, 1875.
Aaron K. Dunkel,	do.	May 6, 1879.
J. Simpson Africa,	do.	May 1, 1883.

Deputy Secretaries of Internal Affairs.

J. Simpson Africa,	commissioned	May 4, 1875.
Lucius Rogers,	do.	June 1, 1879.
J. Wilson Greenland,	do.	May 1, 1883.

Names and Dates of the Erection of the Several Counties of the Commonwealth of Pennsylvania and the Territory from which they were Formed.

The first three counties which were formed, to wit: Philadelphia, Bucks, and Chester, were established at the first settlement of the Province of Pennsylvania.

1. Adams, January 22, 1800, formed of a part of York.
2. Allegheny, September 24, 1788, formed of parts of Westmoreland and Washington.
3. Armstrong, March 12, 1800, formed of parts of Allegheny, Westmoreland, and Lycoming.
4. Beaver, March 12, 1800, formed of parts of Allegheny and Washington.
5. Bedford, March 9, 1771, formed of a part of Cumberland.
6. Berks, March 11, 1752, formed of parts of Philadelphia, Chester, and Lancaster.
7. Blair, February 26, 1846, formed of parts of Huntingdon and Bedford.
8. *Bradford, February 21, 1810, formed of parts of Luzerne and Lycoming.
9. Bucks, one of the three original counties of the Province, 1682.
10. Butler, March 12, 1800, formed of a part of Allegheny.
11. Cambria, March 26, 1804, formed of parts of Huntingdon, Somerset, and Bedford.
12. Cameron, March 29, 1860, formed of parts of Clinton, Elk, McKean, and Potter.
13. Carbon, March 13, 1843, formed of parts of Northampton and Monroe.
14. Centre, February 13, 1800, formed of parts of Mifflin, Northumberland, Lycoming, and Huntingdon.
15. Chester, one of the three original counties of the Province, 1682.
16. Clarion, March 11, 1839, formed of parts of Venango and Armstrong.
17. Clearfield, March 26, 1804, formed of parts of Northumberland, Huntingdon, and Lycoming.
18. Clinton, June 21, 1839, formed of parts of Lycoming and Centre.
19. Columbia, March 22, 1813, formed of a part of Northumberland.
20. Crawford, March 12, 1800, formed of a part of Allegheny.
21. Cumberland, January 27, 1750, formed of a part of Lancaster.
22. Dauphin, March 4, 1785, formed of a part of Lancaster.
23. Delaware, September 26, 1789, formed of a part of Chester.

*Previous to March 24, 1812, this county was called Ontario, but its name was changed to Bradford on that day.

24. Elk, April 18, 1843, formed of parts of Jefferson, Clearfield, and McKean.
25. Erie, March 12, 1800, formed of a part of Allegheny.
26. Fayette, September 26, 1783, formed of a part of Westmoreland.
27. Forest, April 11, 1848, formed of parts of Jefferson and Venango.*
28. Franklin, September 9, 1784, formed of a part of Cumberland.
29. Fulton, April 19, 1850, formed of a part of Bedford.
30. Greene, February 9, 1796, formed of a part of Washington.
31. Huntingdon, September 20, 1787, formed of a part of Bedford.
32. Indiana, March 30, 1803, formed of parts of Westmoreland and Lycoming.
33. Jefferson, March 26, 1804, formed of a part of Lycoming.
34. Juniata, March 2, 1831, formed of a part of Mifflin.
35. Lackawanna, August 21, 1878, formed of a part of Luzerne.
36. Lancaster, May 10, 1729, formed of a part of Chester.
37. Lawrence, March 20, 1849, formed of parts of Beaver and Mercer.
38. Lebanon, February 16, 1813, formed of parts of Dauphin and Lancaster.
39. Lehigh, March 6, 1812, formed of a part of Northampton.
40. Luzerne, September 25, 1786, formed of a part of Northumberland.
41. Lycoming, April 13, 1795, formed of a part of Northumberland.
42. McKean, March 26, 1804, formed of a part of Lycoming.
43. Mercer, March 12, 1800, formed of a part of Allegheny.
44. Mifflin, September 19, 1789, formed of parts of Cumberland and Northumberland.
45. Monroe, April 1, 1836, formed of parts of Northampton and Pike.
46. Montgomery, September 10, 1784, formed of a part of Philadelphia.
47. Montour, May 3, 1850, formed of a part of Columbia.
48. Northampton, March 11, 1752, formed of a part of Bucks.
49. Northumberland, March 21, 1772, formed of parts of Lancaster, Cumberland, Berks, Bedford, and Northampton.
50. Perry, March 22, 1820, formed of a part of Cumberland.
51. Philadelphia, one of the three original counties of the Province, 1682.
52. Pike, March 26, 1814, formed of a part of Wayne.
55. Potter, March 26, 1804, formed of a part of Lycoming.
54. Schuylkill, March 1, 1811, formed of parts of Berks and Northampton.
55. Snyder, March 2, 1855, formed of a part of Union.
56. Somerset, April 17, 1795, formed of a part of Bedford.
57. Sullivan, March 15, 1847, formed of a part of Lycoming.
58. Susquehanna, February 21, 1810, formed of a part of Luzerne.
59. Tioga, March 26, 1804, formed of a part of Lycoming.
60. Union, March 22, 1813, formed of a part of Northumberland.

---

*Part of Venango added by act approved October 31, 1866.

61. Venango, March 12, 1800, formed of parts of Allegheny and Lycoming.
62. Warren, March 12, 1800, formed of parts of Allegheny and Lycoming.
63. Wayne, March 21, 1798, formed of a part of Northampton.
64. Washington, March 28,1781, formed of a part of Westmoreland.
65. Westmoreland, February 26, 1773, formed of a part of Bedford, and in 1785 part of the purchase of 1784 was added thereto.
66. Wyoming, April 4, 1842, formed of a part of Luzerne.
67. York, August 19, 1749, formed of a part of Lancaster.

A TABULAR STATEMENT

Of the population, square miles, and number of acres in the several counties of the Commonwealth of Pennsylvania, with the names of the county towns.

Names.	Population 1870.	Population 1880.	Square miles.	Acres.	County towns.
Adams,	30,315	32,455	531	339,840	Gettysburg.
Allegheny,	262,204	355,869	757	480,480	Pittsburgh.
Armstrong,	43,382	47,641	612	391,280	Kittanning.
Beaver,	36,148	39,605	452	289,280	Beaver.
Bedford,	29,635	34,929	1,003	641,920	Bedford.
Berks,	106,701	122,597	900	576,000	Reading.
Blair,	38,051	52,740	510	326,400	Hollidaysburg.
Bradford,	53,204	58,541	1,162	743,680	Towanda.
Bucks,	64,336	68,656	595	380,800	Doylestown.
Butler,	36,510	52,536	814	520,960	Butler.
Cambria,	36,569	46,811	666	426,240	Ebensburg.
Cameron,	4,273	5,159	381	243,840	Emporium.
Carbon,	28,144	31,923	402	257,280	Mauch Chunk.
Centre,	34,418	37,922	1,227	785,280	Bellefonte.
Chester,	77,805	83,481	763	488,320	West Chester.
Clarion,	26,537	40,328	572	366,080	Clarion.
Clearfield,	25,741	43,408	1,130	723,200	Clearfield.
Clinton,	23,211	26,278	857	548,480	Lock Haven.
Columbia,	28,766	32,409	479	306,560	Bloomsburg.
Crawford,	63,832	68,607	1,005	643,200	Meadville.
Cumberland,	43,912	45,977	554	354,560	Carlisle.
Dauphin,	60,740	76,148	523	334,720	Harrisburg.
Delaware,	39,403	56,101	195	124,800	Media.
Elk,	8,488	12,800	774	495,360	Ridgway.
Erie,	65,973	74,688	772	494,080	Erie.
Fayette,	43,284	58,842	830	531,200	Uniontown.
Forest,	4,010	4,385	431	275,840	Tionesta.
Franklin,	45,365	49,855	756	483,840	Chambersburg.
Fulton,	9,360	10,149	442	282,880	McConnellsburg

Wyoming,	George W. Cooke,	Tunkhannock.
York,	William T. Williams,*	York.

NOTE.—A certified copy of the oath of office taken and subscribed by each county surveyor must be filed in this Department. The act of the 9th of April, 1850, [P. L. 434,] required the oath to be administered in the court of quarter sessions of the proper county. The Constitution [Art. VII, section 1,] provides that the oath shall be administered by some person authorized to administer oaths, and be filed in the office of the prothonotary.

Those marked with an asterisk (*) hold over under the act of April 17, 1869, this Department not having been advised that successors have been elected or appointed and qualified.

† No election held.

‡ No oath filed.

Table showing difference between the County Commissioners' returns of the value of real estate taxable in 1884 and the United States census returns of the value of farms alone in 1880.

COUNTIES.	Commissioners.	U. S. Census.
Adams,	$10,617,109	$14,386,576
Allegheny,	195,603,480	40,411,956

As will be seen by the foregoing table, the census valuation of *farms alone* is much higher in almost every county than the assessed value of *all real estate* taxable in the county as returned to this Department by the county commissioners. The exceptions are chiefly such counties as have a large city or town population, and such as have land of but little value for agricultural purposes. Assuming the census valuation to be correct, or nearly so, it would follow that assessments in Bradford county are laid at one fifth or less of the actual value of real estate. Proceeding on the same assumption in respect to the census valuation in Greene, it would follow that assessments in this county are probably laid within ten or fifteen per. cent. of the actual value. In other words, Bradford assesses at eighteen to twenty per cent. of actual value, and Greene at eighty-five to ninety per cent. Similar comparisons between other counties would disclose great differences also.

Table showing inequalities in assessment of household furniture and pleasure carriages.

Counties.	Taxables.	Value of household furniture, including gold and silver plate, (exceeding $300.)	Number and value of pleasure carriages and buggies.	
			No.	Value.
Adams,	10,036	None.	3,137	$97,947
Bedford,	9,676	$19,930	1,181	45,776
Bradford,	18,353	300	58	1,625
Bucks,	19,179	3,000	1,811	82,635
Butler,	13,817	None.	1,616	45,137
Chester,	22,337	130,850	4,772	237,034
Crawford,	21,600	47,350	203	8,882
Delaware,	14,568	136,050	1,368	87,475
Erie,	20,950	600	4	525
Forest,	1,461	1,800	3	150
Jefferson,	8,891	None.	1,082	17,575

McKean,	8,879	11,187	5	230
Potter,	4,505	None.	None.	
Snyder,	9,516	None.	1,343	37,899
Tioga,	15,135	3,300	None.	
Union,	5,333	10,150	1,172	28,484
Venango,	10,065	68,760	1,022	35,417
Warren,	9,012	17,000	*	7,025

* Number not stated.

The inequality in the assessment of household furniture is made very apparent by comparing the returns of Adams, Bradford, Bucks, Butler, Erie, Lackawanna, Jefferson, Potter, and Snyder, with those of Bedford, Chester, Crawford, Delaware, Union, Venango, and Warren. Bedford, with no town of more than 2,011 inhabitants by the census of 1880, and with a total population of 34,933, returns household furnitu e of the value of $19,930, whilst Lackawanna, with a city of 45,850 by the same census, and a total population of 89,268, returns household furniture of the value of $7,076. Erie, with a city of 27,737 inhabitants, and a total population of 74,681 in 1880, returns $600, whilst Crawford, adjoining it on the south, with fewer inhabitants and a much smaller city population—8,860 in Meadville and 9,046 in Titusville, or 17,906 in all—returns $47,350. Warren, adjoining Erie on the east, and with not much over one third her population, returns $17,000. Venango, in the same section of the State, also contrasts strongly with Erie. Bradford and Erie both put together report only half as much as Forest, the least populous county in the State. Snyder and Union lie side by side, and are not wide apart in wealth or population, and yet Snyder returns no household furniture, whilst Union returns $10,150.

The inequality in the assessment of taxable carriages and buggies is equally striking. Tioga and Potter return none, Bradford returns 58, McKean 5, and Erie only 4, whilst Adams, with less than half the taxable inhabitants of Erie, returns 3,137. Erie values her carriages at $525, and Adams hers at $97,947.

Under the act of July 27, 1842, assessors are sworn to use their utmost diligence and ability to discover and ascertain all the property, real and personal, within their respective districts, and take an accurate account of the same; and to justly and honestly, to the best of their judgment, assess and value every separate lot, piece, or tract of land, with the improvements thereon, and all personal property made taxable by the laws of this Commonwealth, at the rate or price which they (the assessors) believe the same would sell for, if sold singly and separately at a *bona fide* sale, after full public notice. And under the act of May 15, 1841, assessors are required to assess, rate, and value all objects of taxation according to the actual value thereof, and at such rates and prices for which the same would separately *bona fide* sell; and on the return of such assessment or valuation into the office of the county commissioners, it shall be lawful for them to raise the same to the actual value thereof if they believe it has been valued too low.

The county commissioners thus have full power to correct erroneous assessments, and it is to be regretted that they do not exercise this power. The annual reports that go out from the Department of Internal Affairs ought to show, with at least reasonable accuracy, the real value of all property within the Commonwealth taxable for any purpose whatever, but it is questionable whether they do show more than one half of it. The Commonwealth is thus made to appear, in her own official publications, vastly less wealthy than she really is.

No injustice would be done to any property holder, nor would taxes be increased, by the assessment of all property at its actual value. An increase in the assessed value would be accompanied by such a decrease in the rate of taxation as would leave the tax levied just the same as it would be under the existing system of under-valuation.

PART II.--ASSESSMENTS.

ADAMS

TABULAR STATEMENT *for the year A. D. 1884, showing the wards, boroughs, and wards, boroughs, and townships, for county and State purposes; also, the amount by the laws of this Commonwealth for all State and county purposes whatever, acts of Assembly, 28th of February, 1835; 11th of June, 1840; 15th of May, 1841,*

TOWNSHIPS, WARDS, AND BOROUGHS.	Number of taxables.	Value of real estate.	Value of real estate exempt.	Aggregate value real estate taxable.	Value of all household furniture, including gold and silver plate, (exceeding $300.)
